1. Carl's Messianic Complex

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-01 00:00:00 UTC
From: waterspout@juno.COM
Message-ID: <19961101.105145.8127.9.waterspout@juno.com>
Source record: 213667

And then Carl spake unto the people, saying:

>No, many of us are technical professionals with many years of directly
>applicable experience who would like to work on advanced communications
>methods, hardware, protocols, etc. and have NO interest in EVER using
>the code.

>There is NOTHING to be served by forcing us to learn something we will
>never use ...

>There is MUCH to lose by causing us to devote our attention and spare
>time activity in other areas ... YOU lose ... ham radio loses ...

What a pity, Carl and his no code cronies want to save ham radio, and the code standard is standing in their way. Oh the doom and gloom of it all. Woe to those who don't share his bright vision of tomorrow. Wail and weep for the sorrows that are coming upon us.

Get off your cross Carl... I need the wood for an antenna mast.

>> their kitchens (where they fed the homeless) and to assist in coordinating
>> relief. I know... I DID IT MYSELF, so this isn't hearsay. I was there.
>I bet the hams ate well.

As it turns out, on my shift at the Red Cross kitchen I missed the meal
because I was busy with other duties, but I'm sure other hams may have had
the opportunity to eat, and I don't blame them for doing so.
Big deal. If they were on-site, working at meal time and a meal was
served, they should have eaten if they had the time. So what?

There was a need, and hams got the job done well. If that doesn't fit
into your warped notion of what ham radio is all about, tough.
That's the fact, Jack.

THIS IS THE FAIREST MOST HONEST WAY I KNOW TO

SHARE THE WEALTH! Hi there!

Question: would you like to make thousands of dollars,

quick, legally, with NO CATCH? If Yes, then keep reading. Please

take five minutes to read this article. It will change your life, just

like it did mine. If you're not interested, I apologize for wasting your

time.

It's true! You can make up to or over $50,000 dollars in 4-6

weeks, maybe sooner! I SWEAR I'M NOT LYING TO YOU, AND

THIS IS NOT A SCAM! Interested? Then here we go.

A little while back, I was browsing through these

newsgroups, just like you are now, and came across an article

similar to this one, which said; "You could make thousands of

dollars in weeks with an initial investment of only $5!" So, I thought,

"Yeah, right, must be a scam!"... ...but like most of us I was

curious. So, I kept reading.

It said you send $1 to each of the 5 names and addresses stated in

the article. You then place your own name and address in the

article at the bottom of the list at #5, and post the article in at least

200 newsgroups (there are thousands). No catch, that was it!

So I thought it over, talked to a couple of people about the

whole thing. I figured what have I got to lose except for 5

stamps and $5? So, I tried it.

Well, guess what...within 7 days, I started getting money in

the mail! I was shocked! I figured it would end soon, and didn't

give it another thought. But the money kept coming IN, tripling in size and multiplying by 10-20 times the amount that I got the first week! In my first week I made a total of over $1,000!!!! In the third week, I had over $10,000 dollars, and it's still growing. This is my fourth week (Oct 28) and I've made about $42,000 TOTAL, and the money is still coming in.....

Let me tell you how this works and more importantly, WHY it works. Make sure you print a copy of this article NOW, so you can use the information from it, and begin making money.

The process is very simple, and it consists of 3 EASY steps:

STEP 1: Get 5 pieces of paper and write the following on each sheet of paper..."PLEASE PUT ME ON YOUR MAILING LIST." Fold each piece of paper in half. Take five $1 bills and place ONE in each piece of paper. Then put each piece of paper in to it's own envelope and seal it. You should now have 5 sealed envelopes , EACH containing a piece of paper AND a $1 bill inside the folded paper. Make sure the words ..."PLEASE PUT ME ON YOUR MAILING LIST." are written on each piece paper. By doing that, you are creating a service and it's PERFECTLY LEGAL.

Finally, mail 1 envelope to 1 of the following 5 addresses:

1. S. Shaw, 611 23rd St., Sacramento, CA 95816
2. G.Charters,5809 Hudson St., Vancouver, B.C. Canada V6M 2Z2
3. D.Miller, 26 Aristone Dr., Berlin, NJ 08009
4. B.Peale, 1619 Nth 5th St., Perkasie, PA 18944
5. D.Watson, 2430 W.Territorial Rd., Battle Creek, MI 49015

STEP 2: Now take the #1 name off the list that you see above, move the other 4 names up (5 becoming 4, 4 becoming 3, etc..) and put YOUR NAME as number 5 on the list.

STEP 3: Post your amended article (with you name at #5)
to at least 200 news groups (I think there are close to 18,000 of them). This is easy to do. You can either type out this message (altering any part you deem worthy, EXCEPT the name and addresses) with an ordinary editor or with your web browser's 'To:News' key at the upper left corner of this screen (Netscape Navigator 3.0). After typing this article, save a copy. Any time you want to post this article on a newsgroup, just use a flashy subject and post your saved copy. That's it, easy! Now, post the message to at least 200 DIFFERENT newsgroups. 200 IS THE MINIMUM. The more you post, the more money you will make. You are now in the mail order business and will start receiving your $1 envelopes from various people all over the world within days.

HINT: THE MORE NEWSGROUPS YOU POST TO, THE MORE MONEY YOU WILL MAKE. You may even want to rent a PO Box, eventually because of all the mail. If you wish to stay anonymous, you can come up with a name, such as "manager" or "investor." Please be sure to check that all the addresses on the envelopes are correct.

.

LET ME TELL YOU WHY THIS SYSTEM WORKS!!!

Out of every 200 postings, let's say I ONLY receive 5 replies, which is actually VERY LOW. So I made 5 dollars with my #5. Now then, each person who just sent me $1 makes, say only 200 POSTINGS, now with your name at number 4, WHICH IS A TOTAL OF 1000 POSTINGS, not including yours too. 50 people send you $1 now; that's $50 you just made! Now, then your new 50 agents post 200 each with YOUR NAME AT NUMBER 3, OR 10,000 POSTING (50x200). Average return is 500 at $1 each is $500. They make 200 postings, which is 5,000 returns at $1 each, which

is $5,000 dollars! And finally, 5000 people make 200 postings each with YOUR NAME AT NUMBER 1. YOU NOW GET A RETURN OF $50,000 BEFORE YOUR NAME DROPS OFF THE LIST. AND THAT'S IF EVERYONE MAKES 200 POSTINGS ONLY, AND IF ONLY 5 PERSONS RESPOND!!!!!

When your name is no longer on the list, you just take the latest posting that is appearing in the newsgroups, and SEND OUT ANOTHER $5 TO THE NAMES ON THE LIST, PUTTING YOUR NAME AT 5 AGAIN. And start posting again. The thing to remember is, do you realize that THOUSANDS OF PEOPLE ALL OVER THE WORLD ARE JOINING THE INTERNET AND READING THESE ARTICLES EVERY DAY, JUST LIKE YOU ARE RIGHT NOW!!! So can you afford $5 dollars and see if it really works? I think so....

People have said, "What if the plan is played out and no sends the money?" So what! What are the chances of that happening when there are TONS OF NEW HONEST USERS AND NEW HONEST PEOLE who are joining the Internet and newsgroups everyday and are willing to give it a try?

Estimates are at 20,000 to 50,000 new users, every day, with THOUSANDS of those joining the actual Internet. Remember, play FAIRLY and HONESTLY and this WILL WORK, I PROMISE YOU!!!

Honesty is the key, and the best policy. Make sure you print this article out RIGHT NOW, also, try to keep an eye on the newsgroups to make sure everyone is playing fairly.

REMEMBER, HONESTY IS THE BEST POLICY. YOU DON'T NEED TO CHEAT THE BASIC IDEA TO MAKE MONEY!! GOOD LUCK TO ALL AND PLEASE PLAY FAIRLY AND YOU WILL REAP THE HUGE REWARDS FROM THIS, WHICH IS TONS OF EXTRA CASH!!!

<< By the way, if you try to deceive people by posting the

messages with your name on the list and not sending the money to

the people already on the list, you'd be wasting your time.

I talked to someone who did that and only made $150 dollars, and

that was AFTER seven or eight weeks! He decided to send the 5

$1 bills, and in 4-5 weeks, he had over $10K. >>

THIS IS THE FAIREST AND MOST HONEST WAY I HAVE EVER SEEN TO SHARE THE WEALTH OF THE WORLD WITHOUT COSTING ANYTHING BUT OUR TIME!!

GOOD LUCK!

How long did it take you? Did you use the Gordon West RTTY tapes or the
W5YI computer program? How much on the air RTTY did you work on the
Novice bands before you were ready to take the test? Were you able to
pass all three of the FCC Packet elements? Oh wait....they don't have
separate elements for RTTY or Packet! Quite a disparity in mode testing.
One might gather from the examination requirements that as operators, we
are either underqualified on almost every mode, or considerably
overqualifed on one of them.

Scene at auto parts store....
"Do you have set of rear shock absorbers for a 1956 Chevrolet?"
'What size engine?'
"It's a 265 V8"
'Is that a 2 door or 4 door?'
"It's a 2 door"

At which point the guy comes out with a set of head gaskets. Incidentally the phone rang twice while you were standing there, and he spends 5 minutes on each call, grunting and nodding.

'Here ya go, pay at that counter on the other end of the store'
"Wait, wait a minute, this is the wrong part"
'Well, it must be that dang computer!'

Hi !

I have some questions, please answer to my, if you can...

- ON MY ADDRESS : ovidium@ulise.cs.pub.ro -

- Can I access internet using HAMRADIO ?
- I want know more about HamRadio, ('plug and play' info sure...)
Where can I found some info about ?

- Hey ... is a Romanian over here who can help me ;-)

Bye...
Ovidiu...

P.S. I guess this is a list for HAMRADIO ... ;-)

10. Personal Alarm Transmitter Frequencys?

Newsgroup: rec.radio.amateur.misc

From: kcsbvr@icns.nl
Message-ID: <E075LB.8Kx@icns.nl>
Source record: 213676

Hello,

I am trying to find out what frequencys are available / in use for
personal alarms (personal alarm = alarm transmitter worn by, for
example; an elderly or a patient).

What are the documentation numbers that describe the technical aspects
for those kind of short range transmitters?

Someone told me; AL 0417 but I could not get a confirmation on that
from official side (they never heard about it).
Also ETS 300.220 was mentioned and I have ordered that document (will
take some weeks though).

Can anybody comment on this?

I am interested in all papers on this subject that have validity in
Europe, the USA or Australia.

Bas

Morse is Macho (so what). Squiggie the Anti Code has spoken.

Packet is Boring, but if you want to do it, go right ahead. Public Service is ambulance chasing, but some people enjoy being Jr. G. Men and running around with HT's, so good for them, let them go do it.

When you get right down to it Squiggie, I guess ham radio is probably the biggest waste of electricity and stamps in the world. But people do it anyway, because they enjoy it. Life isn't much fun without a little enjoyment now and then.

>Why you people insist on some manual-dexterity "requirement" that's
>clearly irrelevant to one's knowledge of radio and electronics?

'We' don't insist on it, the FCC does. Why do you insist that every ham has to be an EE and a digital designer ? My friend the dentist is a ham. He can't solder, or make simple circuits that work. But he still enjoys other aspects of ham radio. So that's what he does.

>This is NOT a competitive sport where one's physical coordination =
>machismo = "better" ... it is a technical endeavour where one's
>intellectual prowess and knowledge and the bettering thereof are
>*supposed* to be the goals.

Squiggie, you have entirely the wrong idea of what ham radio is. Yes, I know what it says in the FCC documents. But in reality, ham radio isn't the Society of Electrical Engineers. Some hams are truck drivers, some are dentists, some are garbage collectors, some are musicians. For you to expect EVERYONE with a ham license to be an in-the-basement-with a-soldering-iron-techno-weenie-geek is rediculous.

>Why must some of you insist on trying to turn it into some sort of a
>physical coordination/agility/ability contest?

Ham radio IS very competative (the part you don't do, anyway).
Contests are self explanatory. DX'ing is very competative. Even the neighborhood boy's evening ragchew gets competitive, i.e., who's signal is better than who's. Competetion breeds technology, although I don't expect you to realize that. Contesting has produced a lot of accessories for hams that didn't use to be available. When I first got licensed, the closest thing to a voice keyer was a jury rigged tape recorder with an answering machine tape. Now digital voice keyers are common.
Computer software with voice/Morse keyer control, networking for multi op stations, packet spotting, antenna control, etc. is common.

Antenna modeling sofware, propagation software, etc. are all 'new'
to most ham stations in the last ten years. Look at the amateur
satellites. The first one I worked I had to run out in the yard to turn
the antennas. The last one I worked all I had to do was sit and watch
while the tracking computer turned the antennas/tuned the radios
and the other computer uploaded/download data.

I know it won't impress little old spread spectrum you, but if you
really think nothing has changed in ham radio except your digital dodad
stuff, you are uninformed.

Ham radio never was about physical dexterity. Anyone with a physical
coordination problem can get a doctor's certificate and a code waiver.
That program has been around for years.

>If you want to demonstrate physical abilities, go play sports with the
>rest of the jocks ... and leave us radio geeks alone ... <grin>

If you want to sit in the basement and invent digital dodads, go do it.
But don't expect everyone to join you, and don't expect everyone to
stop playing with the aspects of ham radio that they enjoy.

You keep repeating the 'jam it down your throat' aspect of CW. And
in the next sentence you expect everyone to sit and let you jam your
spread spectrum digital dodads down theirs.

Go look up COEXIST in the dictionary (if I spelled it right).

73, Jim KH2D

But you, MD and others endorse that requirement. OR, in a flash
of enlightened thinking, are you now saying you have no problem
with eliminating CW testing if the FCC did that?

> Why do you insist that every ham
>has to be an EE and a digital designer?

Who said that? I haven't seen anyone suggest that hams should
or must be EE or designers.

>My friend the dentist is a ham.
>He can't solder, or make simple circuits that work. But he still enjoys
>other aspects of ham radio. So that's what he does.

Your point? Who has even suggested that your dentist frien
should not become a ham... or for that matter a soccor mom,
high school student, car mechanic or whoever?

>>This is NOT a competitive sport where one's physical coordination =

Nothing in what Carl has written has suggested that he (or any of us
that wish to see code testing go away) wants to create a barrier that
would prevent those people from becoming hams.

>>Why must some of you insist on trying to turn it into some sort of a
>>physical coordination/agility/ability contest?

>Ham radio IS very competative (the part you don't do, anyway).

There is no competition in becomeing a ham... PERIOD

>Contests are self explanatory. DX'ing is very competative. Even the
>neighborhood boy's evening ragchew gets competitive, i.e., who's signal

Are you an officer or Webmaster of an Amaateur Radio Group anywhere in North America?

The Schaumburg (IL) Amateur Radio Club needs your help!

We are trying to compile a list of ALL US (and eventually Canada as well) groups that have;
A) A website, and/or
b) E-mail addresses (for the GROUP, not members of a group)

I'd really appreciate your help. Please send the URL or address to me at:

mailto:n9rjv@megsinet.net

Or, you can leave e-mail to the Webmaster from our Site at;

HTTP://www.ecnet.net/users/ugfeid/sarc.shtml

Thank You

Gerry N9RJV
n9rjv@megsinet.net

14. The ARRL Letter Electronic Update 11/1/9

The ARRL Letter
Electronic Update
November 1, 1996
----------------------------------

* Circulation/Address changes: Kathy Capodicasa, N1GZO
(kcapodicasa@arrl.org)
* Editorial: Rick Lindquist, KX4V (rlindquist@arrl.org)
* Visit the ARRLWeb page at http://www.arrl.org.
----------------------------------

IN THIS UPDATE . . .

* Vanity call signs "next week"
* ARRL Board meets--Highlights:
-->ARRL seeks delay in RF safety rules
-->Board okays agreement with NFCC
-->ARRL to seek primary status in 2300-2305 MHz
-->Dues to rise by $3 a year
* Little LEOs battle continues quietly
* League files to let Advanced class VEs give General exams
* Solar activity up
* APRS helps recover stolen car
* Ham radio rescue
* Atwater Kent time capsule opened
* In Brief: H-T user works Mir; Welcome aboard!;
Ham Radio & More is back; Youngest Extra?;
Grove Communications Expo; Yaesu warns about NiMH
batteries; Operation Grecian Firebolt '96
----------------------------------

FCC COMPUTER GLITCHES PUT GATE 2 ON HOLD

Once again, the word from Gettysburg is "next week." Maybe it was early
Halloween gremlins, but unexpected problems that have plagued the amateur
computer system at the FCC's Gettysburg office all week have all but
eliminated any chance that Gate 2 vanity call signs will be issued in time
for this weekend's ARRL November Sweepstakes CW contest. Hams antsy to learn
when they'll get one of their vanity requests have besieged the FCC with
phone calls this week. A spokesman at Gettysburg said Thursday, however,
that he doubts that the FCC will be ready to issue any vanity call signs
until sometime next week. "I'm 90% sure it's not going to make it this
week," he said.
```

Some optimism flared when October 30 grants appeared in some call sign databases, leading to speculation that the vanity call signs might soon follow. However, the FCC has announced that any grants dated after October 24, 1996, are invalid because many of them were erroneous.

The unspecified computer problems are not related to the vanity call sign program. FCC personnel in Gettysburg already have entered data from the more than 4500 first-day Gate 2 applications, and are poised to start granting licenses once the computer problems are resolved, the spokesman said. The FCC anticipates that event could happen "by the end of next week." It's not known how long it will take to process all of the first-day applications, since this will be the first time the FCC has run the program using "live" data. Before processing, however, the FCC wants to "be sure everything is going to work well," the spokesman said. In the meantime, hams are asked to be patient and to refrain from calling the FCC to inquire about the status of their vanity call sign applications.

ARRL SEEKS TO DELAY RF SAFETY REGULATIONS

Meeting in Windsor Locks, Connecticut, October 24 and 26, the ARRL Board of Directors agreed to ask the FCC to extend the compliance date of new RF safety regulations--released in ET Docket 93-62--from January 1, 1997, to January 1, 1998. The League says the additional time is needed to draft acceptable implementation guidelines. Among other things, the new guidelines require hams running more than 50 W PEP to conduct routine RF radiation evaluations to determine if RF fields are sufficient to cause human exposure to RF radiation levels in excess of those specified. The League already has asked the FCC to delay the effective dates to include new RF safety questions in Amateur Radio license examination question pools.

The Board also authorized ARRL President Rodney Stafford, KB6ZV, to sign a formal agreement with the National Frequency Coordinators' Council. The agreement puts into effect the so-called single-point-of-contact concept outlined in a memorandum of understanding that the ARRL Ad Hoc Repeater Committee negotiated with the NFCC board at the ARRL National Convention in September. The ARRL Board accepted the memorandum with minor changes and voted to have Stafford sign it after the NFCC Board agreed to accept the changes. The changes will allow consultations on other than an annual schedule and will establish the National Frequency Coordination Official (NFCO) as an ARRL administrative office that will act on behalf of the NFCC.

President Stafford characterized the agreement as "the beginning of a mutually beneficial relationship among the ARRL, the NFCC and all amateurs interested in improving the process of repeater coordination." The ARRL and the NFCC now will discuss how best to implement the new agreement.

In other Board actions:

* In view of the congressional mandate imposed on the FCC to auction the 2305-2320 MHz band for commercial purposes, ARRL will seek a change in the amateur service allocation status, from secondary to primary, in the 2300-2305 MHz segment.

* The ARRL will petition the FCC to relax the rules governing the Radio Amateur Civil Emergency Service (RACES) to permit stations operating under RACES to communicate with non-RACES amateur stations actively engaged in an emergency or drill. The League also will seek an increase in the time limit on RACES drills to five hours per week.

* The Board adopted revised legislative positions for the 105th Congress.

* The Board's WRC-99 planning committee will study an ARRL Industry Advisory Council recommendation to extend HF digital privileges to Novice and Technician Plus licensees and report back to the Board.

* Effective July 1, 1997, the Board voted to increase ARRL dues of full and associate members by $3 to $34 annually. The senior dues rate will be increased from $25 to $28. Present or new members may renew memberships or join the League before July 1, 1997, at the current rates. The move to raise dues is related to a discouraging financial report presented to the Board. During 1996, League expenses will outpace income by approximately $500,000. The dues increase is only part of a multifaceted effort to improve the League's financial picture in future years without affecting essential services.

* The Board declared the theme of the 1997 ARRL National Convention in Jacksonville, Florida, to be "Public Service." The Board also declared 1997 as the "ARRL Year of Public Service," in recognition of the critical importance of public service activities in the amateur community.

* The Board commended retiring West Gulf Division Director Tom Comstock, N5TC, for his long-time dedication and service to the ARRL.

Details on the October special Board of Directors meeting will appear in January QST.

LITTLE LEOs BATTLE CONTINUES QUIETLY BUT FIRMLY

Following the initial furor, the "Little LEOs" threat to 2 meters and 70 cm has slipped from the headlines, but efforts continue to thwart the inclusion of their commercial activities in our popular VHF and UHF bands.

Little LEO allocations for the mobile-satellite service below 1 GHz include uplink and downlink frequencies on both sides of 2 meters. Proponents of the technology claim these existing allocations are inadequate. At a May meeting of Informal Working Group 2A (IWG-2A)--where the needs of the low-earth-orbiting satellite industry were addressed in preparation for the 1997 World Radiocommunication Conference (WRC-97)--the Little LEOs sought, over League objections, to include 144-148 MHz and 420-450 MHz on their list of "candidate bands," proposing to share the spectrum with hams. That prompted a call to action by ARRL Executive Vice President David Sumner, K1ZZ, who urged a letter-writing campaign that yielded thousands of responses opposing the inclusion of 2 meters and 70 cm.

While the Little LEO proponents have not backed off, neither have they submitted any technical documentation to show that sharing with the wide variety of amateur uses could actually work. As a participant in IWG-2A, the

ARRL submitted a 42-page technical rationale in late September that details why the League believes sharing to be unworkable. So far, the Little LEO industry had not responded with a technical basis in favor of sharing, and with the IWG-2A final report due November 15, the clock is running out to include any sharing studies involving amateur bands. Unless an attempt were made to short-circuit the process--a possibility that cannot be completely ruled out in the present Washington climate--a US proposal for sharing could not be made in the absence of such a study. Also, under the procedures announced for WRC-97, any US proposal must first be subjected to an FCC notice and public comment process and must be accepted by the US Department of State and the National Telecommunications and Information Administration (NTIA).

If other countries are working on such sharing studies, these were expected to surface at a meeting of International Telecommunication Union ITU-R Working Party 8D October 29 to November 8 in Geneva, Switzerland. ARRL Technical Relations Manager Paul Rinaldo, W4RI, and ARRL International Affairs Vice President Larry Price, W4RA, are attending the session, Paul as a member of the US delegation and Larry representing the International Amateur Radio Union. The US provided no input to the 8D meeting to suggest possible sharing between Little LEOs and amateurs. The output of Working Party 8D goes to the Conference Preparatory Meeting (CPM) in May 1997, and the CPM report will provide the technical basis for WRC-97 decisions. Without a technical basis in the record, Sumner said, WRC-97 would be "hard-pressed" to agree to a shared allocation but added, "The Little LEOs still might look for a way to get their camel's nose into our tent."

LEAGUE FILES TO LET ADVANCED CLASS VEs ADMINISTER GENERAL EXAMS

The ARRL has asked the FCC to change its rules to permit Advanced class volunteer examiners (VEs) to administer the General class license examination. Under current rules, Advanced class VEs can administer Novice, Technician and Technician Plus examinations.

When implementing the original 1983 legislation creating the VE program, the FCC interpreted it to mean that an eligible VE must have passed the next higher telegraphy and written elements, if they exist, to administer tests for a particular license class. In 1985, the FCC denied a petition filed by Gordon Girton, W6NLG, requesting that Advanced Class hams be allowed to administer, among other thing, exam element 1(B), the 13-wpm code test. (A reconsideration petition reversed the ruling, but the FCC did not change the rules because the reconsideration petition did not address the rules change, only the statutory interpretation.) The League did not support Girton's proposal at the time because it was more concerned about the integrity (and perceived integrity) of the then-new VE program. It also appeared that there were enough Amateur Extra VEs to provide exam opportunities--something that's no longer the case in all geographical areas.

The League's filing says that allowing Advanced class VEs to administer General class examination elements will help to create "additional opportunities for operator license class upgrading" by current Technician and Technician Plus licensees and would "take additional pressure off" Extra

class VEs. The League estimates more than 15,500 additional elements could be administered each year if Advanced class VEs could administer exams up to the General class level.

The ARRL/VEC--the largest VEC--has nearly 24,000 accredited VEs--18, 500 Extra class and 4700 Advanced class operators.

SOLAR ACTIVITY RISES

Solar seer Tad Cook, KT7H, in Seattle, Washington, reports solar activity was up slightly last week, and geomagnetic disturbances were down. Solar flux remains right around 70, however, where it has been for a long time. Flux values are expected to dip slightly below 70 until November 14, and then go back up around 70 through the end of the month. Geomagnetic indices should remain stable except around November 15 and again around November 19.

G0CAS of the RSGB comments: "The emergence of a single sunspot on the solar disc on the 20th brought an end to a 36-day period with a spotless sun. The last spotless period of this length was observed back in 1944!" The DK4LI 30-meter propagation beacon is operating on 10.144 MHz, identifying as DK0WCY. A magnetometer built by DK4VW provides the K indices. The beacon is in the town of Kiel, near the Danish border.

Sunspot numbers for October 24 through 30 were 0, 13, 26, 11, 11, 0 and 0 respectively, with a mean of 8.7. The 10.7 cm-flux was 69.9, 69.9, 71, 72.1, 68.4, 70.4 and 70.7 respectively, with a mean of 70.3. Planetary A indices for the same period were 11, 8, 5, 4, 10, 11, and 10 respectively, with a mean of 8.4.

Conditions look good for the ARRL November Sweepstakes CW contest this weekend. Some path projections: From the east coast to the west coast looks good on 80 meters from 2330 to 1300 UTC; on 40 meters from 2100 to 0100 UTC and again around 0730 to 0930 UTC and also 1300 UTC. Check 20 meters from 1630 to 2030 UTC. From Dallas to Chicago, 80 meters looks good around the clock, with strongest signals from 2330 to 1230 UTC; 40 meters should be open from 1300 to 0030 UTC.

APRS HELPS RECOVER HAM'S STOLEN CAR

Scotty Liekette, W8KXX, of San Diego, California, made one of those mistakes that paid off big time! While calling the police to report his car had just been stolen, he remembered he had accidentally left his new project--an APRS car tracker--turned on inside the car. Using his home computer and the WB4APR Automatic Packet Reporting System (APRS) software, he located his car on the local San Diego map, still sending current GPS position beacons from a location on the other side of the city. Liekette told the police dispatcher he'd spotted his missing car, but the police had a hard time understanding how he could "see" the vehicle across town. When an officer showed up at his door, Liekette showed him the stolen car's symbol with its unique amateur call sign on an APRS city map and the officer relayed the location to police department units.

As Liekette later learned, the stolen car and a police unit stopped at the same red light at that time. The thieves were still in the car! Surprised at the officer's attention, the thieves made an illegal left turn at the light, and the chase was on. Unfortunately, the thieves abandoned the vehicle in the middle of a nearby street and got away. The recovered car had suffered only minor damage.--Tuck Miller, KC6ZEC

HAM RADIO EXPLORER SCOUTS AID RESCUE

A ham radio team from Explorer Post 80 of Alexandria, Virginia, helped to locate a missing 11-year-old who had gone off exploring on his own during a mid-October Boy Scout Camporee in the Blue Ridge Mountains at New Market, Virginia. The team coordinated a search effort involving six hams, who located the youngster about 20 minutes after he'd been reported missing. However, that wasn't the end of the tale. The boy was stranded on a ledge about 75 feet down the side of a cliff, some 100 feet above the bottom of a stone quarry. He couldn't climb back up, and he couldn't continue down. As sub-freezing temperatures approached, the Scouts called in the local rescue team, which successfully had the youngster out of the quarry and on his way to a local hospital in less than two hours. He was treated and released. The Explorer Post 80 net, presided over by Richard Harmon, KE4POK, continued to monitor the activity and report on its progress until the rescue was completed. For his role, Harmon got a big hug from the missing boy's mother.--Jim Wilson, K4BAV

ATWATER KENT TIME CAPSULE OPENED

Some vintage radio collectors in the Philadelphia, Pennsylvania, area got a treat last Friday (October 25) when A. Atwater Kent III, grandson of the famous radio manufacturer of the 1920s and 1930s, opened a time capsule that had been sealed and buried at the Atwater Kent factory in Philadelphia in 1929 by his father and grandfather. Using a huge soldering iron, Ralph Williams, Atwater Kent collector and historian and Kent family friend, undid the soldered seals from the copper box after it was removed from the granite cornerstone. Inside were newspapers of the era plus notes from the senior Kent's speech at the dedication.

But the real "prize" was an Atwater Kent Model 55 radio chassis and instruction manual, still in mint condition, in the bottom of the time capsule. (The Model 55--a weighty, top-of-the-line set--was installed in a number of different cabinet configurations in its day.) The Model 55 used 10 Cunningham "globe" tubes and a separate speaker (not included in the time capsule). The General Services Administration now owns the old factory, which is being razed to make way for a new building. The contents of the time capsule will initially be displayed in a new structure nearby, housing the Department of Veterans Affairs. Later, the artifacts are to be loaned to the Atwater Kent Museum.

Several members of the New Jersey Antique Radio Club attended the historical event. For more information and photographs of the occasion, check the NJARC Web at http://www.globalent.net/oldradio.--John Dilks, K2TQN

In Brief:

* H-T user works Mir: Tony Gosset, XE2JHS, in Chihuahua, Mexico, had been trying to work John Blaha, KC5TZQ, aboard the Mir space station (and earlier when KC5TCQ was aboard the shuttle Atlantis) without success until October 17. Tony finally snagged KC5TZQ on 145.55 MHz using just his Realistic HTX-202 hand-held running 5 W into a mobile antenna mounted over an air cooler about 18 feet above ground. Tony reports 59 reports on both ends of the brief contact.

* Welcome aboard! Jean Wolfgang, WB3IOS, is the latest addition in the ARRL Educational Activities Department, where she works part-time. She will handle material requests for EAD's volunteer instructors, recruiters, teachers and folks interested in SAREX contacts. Jean's husband, Larry Wolfgang, WR1B, and their son, Dan, also work at HQ.

* Ham Radio & More is back: The Ham Radio & More radio program--on the commercial bands for more than 5-1/2 years--is again live on shortwave via WWCR. Starting November 3, the show will air Sundays at 2300 UTC on 5.07 MHz. Host and producer Len Winkler, KB7LPW, thanks all the loyal listeners that contacted WWCR and requested the show again be aired live. The toll-free listener call-in line is always open during the show for comments and questions at 800-293-5366. Many local radio stations also air the show, which also is available via RealAudio on the Internet. WWCR rebroadcasts the show Mondays at 1000 UTC on 3.21 MHz.--Len Winkler, KB7LPW

* Youngest Extra?: Thomas Coffee, AC6XC ("alfa charlie six xtra class"), of Torrance, California, could be the youngest Extra Class operator in the US, according to his dad, Peter, AC6EN. Young Thomas, born in September 1985, passed his code and written tests "between piano camp and soccer camp" this summer to receive his Extra a few weeks before his eleventh birthday. His dad reports that, in addition to VHF contesting and family activity coordination, Thomas has used his license as a starting point for science fair projects on antenna gain and directivity at UHF wavelengths. Thomas' 6-year-old brother Daniel is already working on Ohm's Law problems so he can get his own license, while 4-year-old sibling Brian has been heard to ask, "Do you copy?" during playground games.--Peter Coffee, AC6EN

* Grove Communications Expo: The seventh annual Grove Communications Expo, October 18-20 in Atlanta, Georgia, emphasized satellite communication as well as more traditional terrestrial monitoring activities. Astronaut Ron Parise, WA4SIR, keynoted the banquet, which drew more than 170 people. Ron's slide show mentioned SAREX activity aboard the space shuttle, and he even brought along a tape recording containing SAREX communications that clearly demonstrated just how difficult it is to copy narrowband FM signals on the shuttle under "high-volume" conditions. For more information on the event, check the Grove Communications home page at http://www.grove.net.--SpaceNews/John A. Magliacane, KD2BD

* Yaesu warns about NiMH batteries: Yaesu is advising customers not to use nickel-metal hydride (NiMH) batteries in any of its Amateur Radio hand-held transceivers, and warns that such use could invalidate the warranty. Yaesu says the NiMH batteries--while they look the same as NiCd batteries on the

outside--are "completely different" internally. Yaesu says the NiMH batteries "cannot be charged by any Yaesu wall or desk chargers, since these chargers do not prevent overcharging, and nickel-metal hydride batteries become very unstable." Yaesu also says NiMH batteries do not perform well when they are repeatedly discharged at high current rates.

* Operation Grecian Firebolt '96: Members of the Military Affiliate Radio Systems of the Army, Air Force, and Navy-Marine Corps and "civilian" hams cooperated with the US Armed Forces and the Federal Emergency Management Agency this past summer during Operation Grecian Firebolt '96. The June test of global communication capability involved 23 active and US Army Reserve units in 11 states and three countries. The exercise was sponsored by the US Army Information Systems Command, Fort Huachuca, Arizona. During the exercise, civilian volunteers throughout the country helped to establish an emergency communication network by providing personal radio equipment. Ham radio volunteers operated on MARS frequencies, initiating or relaying emergency message traffic. Grecian Firebolt '96 was an effort to test and evaluate worldwide communication capability to support two regional military operations while also responding to a natural disaster.--Carnotes, the newsletter of the Office of the Chief, United States Army Reserve; submitted by Ross M. Boyer, N2ISU

Carl finally takes the plunge, and reveals his true sentiments: Only
those who repair and build radios, are "real" hams. What nonsense!

> >To me, Morse code is something that should be a requirement, and if

One can have an interst in radio, yet not have the time, equipment, work
area or inclination to do repairs to equipment or to build equipment.
Carl, everyone knows that except you, apparently.

Seems I heard that kind of expression was the attempt of a feeble
mind to express itself.
What you express regarding no-code tends to confirm that too.

Heard from the great halls of the FCC in an office high above the street:

Programmer_1: (language cleaned up to meet FCC broadcast standards)
"RESET! 10-9-8-7-6 ..... ahh ****! gosh darn it all ....! I
thought we had it this time! It's STILL not working right. Maybe next week."

Programmer_2: "Hey, who's got the backup database?"

P_1: "Better log on and get the backup from QRZ!"

P_2: "Not again! Do we have to use the TTY, or can we use the PC with the
fast 1200 baud modem?"

Public Relations Official: (whispering) "shut UP! there's that lurking ham
outside the hall, I think he's one of those extras camped out in the lobby"
The PRO pushes the hidden button under the desk top. An alarm rings in
security. Agent_1 puts down a powdered doughnut, checks the monitor, and
spots the ham running in the corridor. He pulls two levers, marked 'gate 3'
and 'gate 2' and two iron gates crash down, blocking escape.

Agent_1: "We've got him now!" as he slams a magazine into his Uzi 9mm
machine pistol.
Agent_2 already has her semi-auto Street-Sweeper 10ga. magnum shotgun in
hand, and pulls back the bolt and releases it to chamber the first round.
They charge out of the office into the hall, passing gate 1. It looks like
the ham's bacon is cooked, but he slips through an unlocked office door just
after the agents round the corner. The agents, stopped by gate 2, call for
backup, and for the gate to be raised. A servo motor engages, and the gate
rises. The agents run, then flatten against the wall, one on each side of the
door.

A_1: "You're surrounded, and can't escape! Put down your HT and come out!"
Moments pass, nothing heard, and Agent_2 motions that she's going to kick
down the door. She does, (breaking off the spike heel on her left foot) and
both charge in, just like the cop movies we all watch. Later she wonders why

she didn't try the knob first. She scans the room, and knocks a paper-clip cup onto the floor. The noise startles A_1, who whirls, levels the Uzi, and almost shoots the watercooler. He then spots the open window. Next to it is a huge AM rig, rack mounted. A Coax RG-213 cable leads out of the window, but down, not up. It's vibrating, but the connector holds as the ham rappels to the ground!

A_1: (shouting) "Quick! it's the old Boat Anchor Trick! He's getting away!"

A_1 & A_2 run to the window, and both shoot into the courtyard, A_2 first, then A_1 joins in:
BOOM! BOOM! Pop Pop Pop Pop Pop Pop BOOM! BOOM!

The agents miss the ham, who leaps through a window propped open by a stack of 807's. The ham escapes into the lobby, and blends into the crowd of extras while relaying the message "maybe next week". Some sigh, and mutter about some contest and weekend plans, while others vow to pound brass. The crowd disperses, to reconvene next week. Back in the office, high up above the crowd, a Teletype is punching paper tape as it downloads a complete backup database from QRZ. The PRO is writing a memo, advising the whole staff to keep the phone off the hook during working hours. Meanwhile, agents _1 & _2 are debriefing. Both are still angry about the Extra ham getting away.

A_2: "I was aiming for a real trophy, a Silent Key listing in QST! Maybe he was a life member, or even on the honor roll!"

A_1: "I would have been satisfied with giving him a call with more dashes than a Colorado Novice! Anyway, when you shoot low, you have to aim low. Be glad this week is over"

Back at the keyboard, wa2yte is wondering if his call is really that bad after all!

Cheers,
Larry

20. Re: Los Angeles - Active\Popular Repeaters

>which of them are the most heavily used.

Brian,

I would assume you must be asking about the 2-meter band, since
you didn't say. Scanning late at night and early in the morning
is a pretty decent way to find them. In fact, the daytime and
weekends are pretty quiet on many repeaters.

If you really want the heavily used ones, I would toss out a few:

147.270 + no pl Mt Disappointment -used by many new hams and a few nuts
145.300 - no pl Mt Disappointment -same as above
147.705 - 114.8 Oat Mtn -covers SF Valley well
147.120 + no pl Mt Thom -great coverage if they ever fix the rxvr.
145.320 - 114.8 TRW ARC
145.180 - 156.7 Telco Pasadena -covers SG Valley, good people on it.

These are not a complete list - just the ones that came to mind.

I'd recommend getting on a low level local repeater. The high level ones
that everybody can hit are plagued by idiots. The best folks are local.

As for the 440 band, it's pretty sad. About 95% of the space is locked
up by closed private autopatch machines. There is one open linked system
there named MARS (Metropolitan Amateur Repeater System) that covers the
LA Basin, especially the SF Valley. The repeaters in that system are:

446.650 - pl 67 Mt Lukens KJ6TQ
445.2875 - pl 123 Granada Hills KO6TD
446.4375 - pl 67 Oat Mountain KN6JE

There is also an antelope valley repeater which is not yet linked.

Hope to hear you out there soon, Brian!

-John, AC6VV

21. Announce: RF version 1.1 available (includes limited license facility for evaluation)

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-01 00:00:00 UTC
From: Jon Jenkins <academic@onthenet.com.au>
Message-ID: <55dk9h$n3c@fjholden.OntheNet.com.au>
Source record: 213687
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.space

```
If you are not a registered RF user or are not interested in
radio or micorwave circuit design then hit delete now.

This news item announces that a new version of RF (1.1) is available.

The upgrade is available either via ftp:

ftp.onthenet.com.au /pub/academic/

or via WWW ftp:
ftp://ftp.onthenet.com.au/pub/academic

or simply via the WWW
http://www.onthenet.com.au/~academic

The update is free to all existing RF users although you will
have to contact Academic for a new serial number. The encrypt
key to decode the ftp'able zip file pdisk1.zip is the same as
for V1.0.

Also available now to interested parties are time limited
licenses which allow you to use RF's full facilities for a
limited time. Please contact us if you would like to try
RF.

The update is an interim update to add some requested features
and fix some bugs. A major upgrade (1.2) containing many new
features will be available in about four months.

If you have any questions please contact academic@onthenet.com.au

Endorse the requirement is a bit of a misnomer. I support the
requirement because it currently exists. I am also willing to
support alternatives that make sense. Unfortunately I haven't
seen any that I agree with to any large extent.

>> Why do you insist that every ham
>>has to be an EE and a digital designer?
>
>Who said that? I haven't seen anyone suggest that hams should
>or must be EE or designers.

You must have missed the series of postings from Carl where he
insists that ham radio is a technical oriented hobby and people
with no technical competence are useless CBers.

>Your point? Who has even suggested that your dentist frien
>should not become a ham...

Carl has.

In a previous article, NDQS46A@prodigy.com (George Arsics jr) says:

> Few in the amateur community are yet aware that with the
>closing of all 15 FCC monitoring stations that the FCC has completely
>abdicated its congressionally mandated responsibility to monitor &
>regulate the spectrum.
> Discussions of "remote monitoring" schemes are just that, schemes
>to fool Congress and the public. There IS no more spectrum
>monitoring capability, Chairman Hundt's lies notwithstanding.
> Character & integrity left the FCC with the appointment of
>Reed Hundt to Chairman by his college buddy Clinton.
>

If you look at this objectively, I think you'll find this was the result of funding cuts imposed by a Republican congress, not a single person appointed to chairman.

ARLP045 Propagation de KT7H

ZCZC AP65
QST de W1AW
Propagation Forecast Bulletin 45 ARLP045
From Tad Cook, KT7H
Seattle, WA November 1, 1996
To all radio amateurs

SB PROP ARL ARLP045
ARLP045 Propagation de KT7H

Solar activity was up slightly last week, and geomagnetic disturbance was down. Solar flux is still right around 70 though, as it has been for a long time. Flux values are expected to dip slightly below 70 until November 14, and then back up around 70 through the end of the month. Geomagnetic indices should remain stable except around November 15 and again around November 19.

DL1VDL emailed a quote from G0CAS of RSGB: ''The emergence of a single sunspot on the solar disc on the 20th brought an end to a 36 day period with spotless sun. The last spotless period of this length was observed back in 1944.'' DK1VDL also wrote that DK4LI is running a 30 meter propagation beacon operating on 10.144 MHz identifying as DK0WCY. A home brew magnetometer built by DK4VW provides the K indices. It is in the town of Kiel near the Danish border.

Sunspot Numbers for October 24 through 30 were 0, 13, 26, 11, 11, 0 and 0, with a mean of 8.7. 10.7 cm flux was 69.9, 69.9, 71, 72.1, 68.4, 70.4 and 70.7, with a mean of 70.3. Planetary A indices for the same period were 11, 8, 5, 4, 10, 11, and 10, with a mean of 8.4.

Conditions look good for the ARRL Sweepstakes contest this weekend.

Some path projections for this contest weekend.

From the east coast to the west coast 80 meters looks good from 2330z to 1300z, 40 meters from 2100z to 0100z and again around 0730z to 0930z and also 1300z. Check 20 meters from 1630z to 2030z.

From Dallas to Chicago 80 looks good around the clock, with strongest signals from 2330z to 1230z. 40 should be open from 1300z to 0030z.

-
Here is a summary of news items covered on edition #188 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 8-Nov:
-
1. ARRL Board Votes to Increase Member Dues at Special Session
2. FCC Computer Sputters, Gate 2 Vanity Calls Delayed Another Week
3. Popular Commercial Ham Radio Program Returns to Live SW Air
4. Special Event Station Calendar
5. USAF Delays Launch of South African Satellite 'til Next Summer
6. End of an Era - "AR Education News" Ceases Publication
7. "The RAIN Dial-up" from Chicago
8. Two Seattle Broadcast TV Stations Pursue High-Def TV Licenses
9. NASA Select TV to Move to New Satellite Early Next Year
10. If 240 MHz Isn't Fast Enough, New 533 MHz Processor Unveiled
11. Weekly Propagation Forecast
12. "Ancient Amateur Archives" with Bill Continelli, AB2CA
13. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
14. French Solve Phone Number Shortage with Longer Phone Numbers
-
Funding for the program's transmission and production expense was
provided this week by a grant from Gene Wicklund, WA0ZOK, of Horace,
North Dakota, where "This Week in Amateur Radio" is heard on the
WA0ZOK repeater, serving Fargo, North Dakota; Morehead, Minnesota;
and the Red River Valley on 443.75 MHz.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard on the "W0KIE Satellite Network" each Saturday at 9:00 PM
(EST) on the Hughes Communications SBS-6 commercial communications
satellite, transponder 13B upper, located at 74 degrees west
longitude in equatorial geosynchronous orbit. The transponder
center frequency is 12.019 GHz; tune up in frequency to 12.031 GHz.
Program audio is on the 6.2 MHz analog subcarrier and carried on
VHF/UHF repeaters throughout North America and on 160 meters at 1860
kHz. Contact your local amateur radio club or repeater operator if
"This Week in Amateur Radio" is not being heard in your area.
-
```

Here in the Capital District, "This Week in Amateur Radio" is heard on our "flagship" repeater, WA2OQE/R in Troy, on 145.33 MHz, courtesy of the Niagara-Mohawk Amateur Radio Club. The program is repeated Mondays at 8:00 PM.

-

Production and transmission expenses are underwritten by donations from repeater operators, amateur radio clubs, and individuals. Further information is available from George Bowen, N2LQS, at 518/283-3665 (email kxkvi@delphi.com) or Stephan Anderman, WA3RKB, at 518/664-6809 (email sanderman@delphi.com). You may also reach them @ WA2UMX.FN32AW.ENY.NY.USA.NA via amateur packet.

No chips at all? Well that leaves out ICs, transistors, and junction
diodes then. Someone posted a circuit for a razor blade radio here
a few weeks back. And I suppose empty state devices would be allowed,
and someone posted the schematic for an AA5 here recently too.

Seems a pity you're disallowing any electronic device developed in
the last 40 years though. Sure does limit your options.

Where might that be? Realize that VITA has been running briefcase
pacsat stations off solar power in some of the most primitive areas
of the planet for a number of years now. There's even a version of
NOS for the HP95 palmtop. You don't need mains electricity to have
a computer.

And don't plead poverty either. If you look at the pictures in
QST, amateurs in some of the most out of the way spots still
seem to have late model Kenwood radios on their operating
desks. The fact is that the average person in the third
world, those making $200 a year, simply isn't an amateur.
They don't have the leisure time to spare from keeping body
and soul together. The hams in the third world are among
the elites, and they've got at least as much money as you
or I.

>And when I'm driving in my car
>I'm lots safer behind the wheel with one hand on a set of paddles or a J-37

Ever hear of text to speech algorithms? Even kids' toys like Speak'n'Spell
have voice output today. Why not for mobile data use? As to data entry,
look at the Winniebiko setup with a chording keyboard on the handlebars.
(A chording keyboard has 7 keys, and you generate text by directly pressing
the binary ASCII values. It's actually no slower than typing on a QWERTY
keyboard once you get used to it.) With it, you can keep both hands on
the wheel.

Right on for getting it to work! FYI, I did NOT have the cable
removed. I did however have it replaced to see if that was the
problem.. It was then sent to Kenwood, and is at their shop now. $200
for the part ALONE. New control board. I had a friend look at it. She
had done work for NASA doing PC Boards. And she said she wouldn't have
touched it. One bajillionth of an inch, and your radio goes bye-bye.
Is opening up the frequnecy REALLY worth the risk?? I know, there's
probably a lot of people who have sucessfully completed the mod, and
just as many who had their radio fried. I unfortunately am one of the
latter.

I have just written a Morse Code practice program for the Mac computer. You can enter in the speed (in wpm) and the length of the text (in minutes), and then it will play random letters, numbers, punctuation, and spaces through the Mac's internal or external speaker. The speed can be anywhere from 1 wpm to over 100 wpm. Also I have set the default pitch to 550 Hz, but that can be changed too, if desired.

This is version 1.0. I'm also working on version on 1.1, which will in addition write the text out to a file while the text is being "played" on the speaker simultaneously. Then what you copy can be verified for accuracy.

Please e-mail if you would like a copy. (It's freeware.)

Nope. Often as I screw up, I managed to say what I meant this time. But the 50 ohm SWR meter would also read 1.5:1 for any length of cable if the cable were 75 ohms. (Of course the SWR on the cable is 1:1 in this case, not 1.5:1 as it would be if the cable were 50 ohms.)

I don't recall seeing anyone demand that you learn to decode RTTY and packet signals in your head in order to have HF privs ... that's the same thing as demanding that others learn to copy CW ...

I KNOW how CW *works*, just as I know how AM/FM/SSB/RTTY/packet, etc work. I even know how to decode it by ear (just not as fast as you'd like) ... HOW MANY WPM CAN YOU COPY IN RTTY/packet, etc???????

Why is OOK Morse the ONLY one we force folks to decode by ear?????

Makes ZERO sense ...

When you agree to learn to decode RTTY and packet, etc in your head, then maybe I'll agree to roll over and submit to the Morse hazing ... otherwise, it's not fair ...

53. arrl survey 1996

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-02 00:00:00 UTC
From: bert@skypilot.demon.co.uk
Message-ID: <327b7036.15947495@news.demon.co.uk>
Source record: 213573
Cross-posted to: uk.radio.amateur,rec.radio.amateur.policy,rec.radio.amateur.misc

help - 1996 arrl survey
the arrl are carrying out a survey
if you wish you can send me your answers on here and i
will foward them to arrl hq or you can e-mail your
relies direct to them at k0to@arrl.org

We would like you to participate in a survey that will
have important ramifications for the future of Amateur
Radio.

The ARRL is developing positions on several issues
that will arise at the 1999 World Radiocommunication
Conference (WAC-99) of the International Telecom-
munication Union. The conference will review the in-
ternational radio regulations pertaining to Amateur
Radio. The international regulations provide the frame-
work for the FCC regulations that govern us.

Decisions at WRC-99 will be made by government rep-
representatives who will be dealing with many issues, in-
ternational Amateur regulations being only one item.
The United States position with respect to changing the
international Amateur regulations will be heavily influ-
enced by input from the ARRL. It is also important that
Amateur Radio develop a worldwide position through
the International Amateur Radio Union (lARU), so that
governments throughout the world will hear a consis-
tent message from their amateurs. The IARU position
will reflect the views of its member-societies, including
the ARRL.

To help in adopting positions on amateur issues to be
covered at WAC-99, the ARRL Board of Directors has
formed a WRC-99 Planning Committee. Determining
the opinions of ARRL members and potential members
on the most controversial issues is an important step in
the committee's work.

A survey questionnaire is being sent to a random sample
of ARRL members and other licensed radio amateurs.
Any member who wishes to do so is welcome to respond
to the same questionnaire, which is reproduced below.
The responses from the random sample and the responses
to this QST survey will be tabulated separately.

Please take a few moments to complete the questionnaire and return it to: ARRL WRC-99 Planning Committee, 225 Main St, Newington, CT 06111. This is your opportunity to influence the positions that the ARRL will advocate to the US government and beyond.

Thank you for your co-operation.

Tod Olson, K0TO
Chairman, ARRL WRC-99 Planning Committee
Director, ARRL Dakata Division

Part I.The international requirement for Morse code ability

At WAC-99, it is anticipated that at least one country will propose eliminating the existing Treaty requirement that governments test a person's Morse code ability before issuing an Amateur Radio license for operation on the HF bands (below 30 MHz).

Even if the Treaty requirement were eliminated, it would not automatically cause any changes in the requirements for any class of amateur license. It would be up to each government (in our case, the FCC) to decide whether to continue their existing Morse code requirements, or to reduce or eliminate them.

1. Which of the following two statements is closer to your own opinion with regard to a possible change in the international regulations?

O A. The Morse code requirement for Amateur Radio licensing is no longer relevant, or soon will not be relevant, in the international regulations.

O B. For the foreseeable future, it is important to retain the Morse code requirement in the international regulations. th

2. Please support the reasons for your position by indicating your agreement or disagreement with each of the following statements:

A. Each country should be able to make up its own mind whether to have a Morse code requirement, or not.

O Strongly agree O Agree O Not sure/no opinion
O Disagree O Strongly disagree

B. The Morse code is still important because it helps amateurs to communicate across language barriers.

O Strongly agree O Agree O Not sure/no opinion
O Disagree O Strongly disagree

C. The Morse code requirement helps ensure that radio amateurs are disciplined operators.

O Strongly agree O Agree O Not sure/no opinion
O Disagree O Strongly disagree

D. The Morse code is a good thing to know, but it should
it should not be a licensing requirement.

O Strongly agree O Agree O Not sure/no opinion
O Disagree O Strongly disagree

E. Knowing the Morse code just isn't important any more.

O Strongly agree O Agree O Not sure/no opinion
O Disagree O Strongly disagree

F. If the rules for Amateur Radio were being written for
the first time today, there would not be an international re-
quirement of Morse code ability for access to the HF bands.

O Strongly agree O Agree O Not sure/no opinion
O Disagree O Strongly disagree

Part II. Licensing requirements in the United States.

1. On February 14,1991, the FCC eliminated the Morse
code requirement for a Technician license for operation
above 30 MHz. What is your opinion of this change?

Poor Excellent
1 2 3 4 5

2. What is your opinion of the Volunteer Examiner pro
gram through which all Amateur Radio examinations
are now administered?
Poor Excellent
1 2 3 4 5

3. In your opinion, what should be the Morse code pro
ficiency requirement for full Amateur Radio privileges?
(Circle the answer that is closest to your preference)
none 5 wpm 10-13 wpm 20 wpm no opinion

4. There are now six classes of Amateur Radio license in
the United States. In your opinion, if the FCC were de
signing the licensing structure for the first time today,
how many different classes of Amateur Radio license
should there be?
1 2 3 4 5 6 7 or more no opinion

If your answer to question 4 was "4," please go to question 8.
If your answer to question 3 was anything but "1," please
continue with question 5.

5. In addition to the Technician license which has no
Morse code requirement, at the present time three levels
of Morse code proficiency are defined in the FCC's Ama
teur Radio rules: 5 words per minute (wpm), 13 wpm, and

20 wpm. In your opinion, how many levels of Morse code proficiency should there be?

none 1 2 3 more than 3 no opinion

6. In your opinion, should Morse code ability be a factor in earning privileges to use modes other than Morse code?
yes no no opinion

7. At the present time, Technician Plus and Novice lic ensees can use several modes in a part of the 10-meter band and only CW on part of the 80, 40, and 15-meter bands. Do you favor increased HF privileges for Techni cian Plus and Novice licensees?
yes no Technician Plus only no opinion

8. If Morse code requirements for HF privileges were to be reduced or eliminated, would you favor adding somc thing to the examinations to take their place?
(Check all that apply)

O No opinion
O Yes, more questions on how to be a good, considerate operator
O Yes, more technical questions
O Yes, more questions about regulations
O Yes, other questions (please specify)

1. What is your age?
O under 18
O 18-24
O 25-34
O 35-44
O 45-54
O 55-64
O 65 or older

2. How long ago did you receive your first license?
O 5 years or less
O 6-10 years
O 11-15 years
O 16-20 years
O more than 20 years

3. How long ago did you receive your Amateur Radio license?
O 5 years or less
O 6-10 years
O 11 - 15 years
O 16-20 years

What is your current radio license
O Extra
O Advanced
O General
O Technician Plus
OTechnician
O Novice
O Other/not licensed

5. What is your ARRL membership statu
O Present member (including life member)
O Former member
O Never member

6. How would you characterize your use of Morse code in Amateur Radio?
O Use it regularly
O Use it rarely
O Never use it

7. How would you describe your use of frequencies?
O Use HF (below 30 MHz) only
O Use VHF/UHF (above 30 MHz) only
O Use both HF and UHF/VHF
O Inactive

tx fingerprint software
Repeater Control

It's now possible to obtain a fingerprint
of a transmitter's signal with transmitter
ID technology. MoTron Electronics offers
a transmiticr fingerprinting system on a
card that fits inside any IBM PC or compat-
ible computer. As stated in their flyer,
"When keyed, every transmitter exhibits a
unique frequency-versus-time characteris-
tic before it stabilizes on its operating fre-
quency, making it possible to identify a
particular transmitter by means of captur-
ing and displaying the frequency-versus-
time history " Even like-model transmitters
coming off the same production line have
unique characteristics that allow each of
them to be identified individually.
A number of hams (and the FCC) have
used this technology to identify signals
from jamming stations. Once you have a
fingerprint of the jamming signal, you can
compare it to other signals over succeeding
days. Chances are, the operator will use the
same radio legally.

Some have taken this idea a step further.
Once the data is captured, can it be placed in
a database and used to control a repeater?
The Northern Virginia FM Association
(NVFMA) is researching the concept, and
the results could be fascinating. With this
technology it might be possible to identify
each signal received by the repeater and
compare it against a transmitter database. If
there isn't a match, a new record would au-
tomatically be added with the access control
field set to "on" so that the person could use
the repeater. Over time, the repeater would
build its own database of "known" users
jamming, the control operator could
identify and lock out the offender by chan g-
ing the access control field to "off." If the

signal appears again, it will be automatically ignored by the repeater system. The only way the person could regain access is by using a different radio. If he used the radio in violation of repeater rules, however, it would be locked out as well. Unless he is independently wealthy, he'll soon run out of radios to use for jamming!

As part of their research project, the NVFMA is looking for anyone who has knowledge of any transmitter or repeater being controlled in this fashion. If you have any information on the subject, please send a message to Brad Flippin, K6HPR, 13627 Clarendon Springs Ct, Centreville, VA 22020-3019; or e-mail him at 70214.3507@compuserve.com. For more information about MoTron's TransmitterlD system, see their Web page at http://motron.com/.

My only negative comments are:

1) No pricing information. Why not? When customers go to the trouble of finding a website, the pricing should already be there. Why not put it there???

2) Why not allow customers to purchase from the website? Many people are not as hung up on security as others. Besides, netscape 3.0 is secure enough for most people.

Lot's of postives. Nice products (the 'best' of course!)

57. Need advice on rotator R&R

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-02 00:00:00 UTC
From: Stan Huntting <stan@mutadv.com>
Message-ID: <01bbc8df$f7963860$046085cc@stan.csn.net>
Source record: 213577
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.dx,rec.radio.amateur.equipment,rec.radio.amateur.misc

I live near Boulder, Colorado, where the BIG winds blow.

Last week's big wind got my rotator - it behaves as
though a lot of teeth are missing from the final drive
gear. HyGain offers great support, but I think that
starts AFTER I get the rotator off the tower. Now, I
need help with the task of removing it for repair.

The rotator is a HyGain HDR-300 on a Rohn 55G tower.
It mounts to the bottom of a mounting plate, which is
about 6' below the thrust bearing. Assuming the hex set
screws for the clamp (above the mounting plate) will
release, dropping the rotator out should be as simple
as removing the four bolts which attach it to the
mounting plate. The 55G is big enough to get the
rotator in and out through the side of the tower.

My big concern is this: even though the weight of the
2-1/2" diam mast and antenna (combined weight of about
250 lb.., mostly ABOVE the thrust bearing) is born by
the thrust bearing, I think the rotator is essential
for lateral stability of the mast - I don't think the
thrust bearing can maintain the vertical alignment of
the mast by itself. Am I right? Is there a standard way
of stabilizing the lower end of the mast while the
rotator is removed and repaired (likely to be many
weeks)? I'd really rather not remove and reinstall the
antenna and mast.

Also, if the hex set screws that fix the mast clamp
to the rotator output shaft are really frozen, what are
the methods (in order of increasing desperation) for
dealing with them - liquid wrench, EZ-out?

Thanks for suggestions.

Stan

A few months ago I was looking at those two, myself. I went with the Icom &
have been happy with it. Each has unique advantages & disadvantages. As I
recall (could be wrong), the Yaesu is not a true dual bander (that is, you
cannot receive on both bands simultaneously) which ended up being the
deciding factor for me. I believe the Z1A has been discontinued - which
would mean they should be available for a good price.

>When you agree to learn to decode RTTY and packet, etc in your head,

Actually, I do know someone who can kind of do this, but only at the
beginning of a transmission to tell him who is connecting to him.

Me, I have no interest in packet or RTTY. I prefer to be the mechanism
of communication, not just have two computers connect to one another
and exchange signal reports.

At one point two years ago I was actually considering writing a
contesting artifical intelligence inference engine to work in conjunction
with a computer telephony system I have here, and hook the whole
thing up to my HF radio during a contest. I'd sit back and let the
thing operate (under my supervision, of course) making contest
contacts the entire weekend. The entire exercise was merely to show
the stupidity and simplicity of contesting, but like everything else,
I have better things to work on with my time.

Message-ID: <327bcd74.31372857@news.concentric.net>
Source record: 213591

I'm interested in obtaining a base for a Bunnell key. I'm not sure what the base should be since when it was given to me it was mounted on a piece of plywood. It's a J-37 style key.

I also need a ball bearing to be used in a Radio Shack bug. This is the black key with a clear top on it. I have got to making me a new pivot rod yet, but it someone has one with the original pieces, I'd be interested in them.

I am interested in obtaining a Navy key with the skirt around the knob. I have an 8-Meg 72 pin SIMM (nonparity) to trade or a new FTS-17A tone Squelch board.

Will consider key trades for the SIMM and FTS-17A board.

Eric,

There is a circuit described in the Nov. 1991 issue of 73 magazine that could easily be adapted for this purpose. It uses the same voice recording chip used in many telephone answering machines. You can also find ads to buy such a thing in almost any of the magazines, if your soldering iron is a bit rusty.

>>
>
>Carl finally takes the plunge, and reveals his true sentiments: Only
>those who repair and build radios, are "real" hams. What nonsense!

Not exactly, Jim ... the writer said he didn't "care how tubes or transistors work, nor give a hoot ..." in other words, he doesn't give a damn about RADIO ... just "yacking" ... it is the Amateur RADIO Service, as Jim and others rush to point out ...

Hams are supposed to be technical types who tinker and build and experiment ... that's what ham radio is FOR ... according to 97.1 ...

Yes, I would maintain that the "gamers" and "yackers" have taken over to some extent and are trying to pervert ham RADIO into ham GAMES and ham YACKING, without reagard the the REAL (radio, electronics, technical) purpose of ham radio ...

So don't try to make "Carl's sentiments" sounde evil or sinister ... "Carl's sentiments" are in keeping with part 97.1 AND the spirit of early ham radio before the gamers and yackers took over ...

>One can have an interst in radio, yet not have the time, equipment, work
>area or inclination to do repairs to equipment or to build equipment.
>Carl, everyone knows that except you, apparently.

Again, Jim, the writer admitted to having no interest in the radio or technical part ... he didn't say "I'd like to fiddle with the technical stuff more, but I don't have time." He said "I don't give a hoot" ... that's a BIG difference ... so again, don't make my "ham radio is *supposed* to be technical" sentiment out to be evil or sinister ...

>An electrical 1/2 of coax is a tried and true method of mesuring
>the SWR at the antenna feed point remotely for exactly that reason.
>Its totally invisible to the remote test gear. If you doubt it try it!

You probably mean "measuring the impedance at the antenna feed point". If used for that purpose, even a small amount of coax loss can make a suprising amount of difference in the measurement. It's particularly bad if the impedance to be measured is very different from the Z0 of the half wavelength cable. Loss will cause the value looking into the line to be skewed toward the Z0 of the cable.

As for SWR measurement, consider an antenna which has exactly a 50 ohm feedpoint resistance and no reactance. Connect it to your rig with a half wavelength of 75 ohm cable, and put an SWR meter at the rig end. A 50 ohm SWR meter will read 1:1. The SWR on the cable is 1.5:1. A 75 ohm SWR meter, if you can find one, will read 1.5:1. (Actually, the meter will read a little less due to inevitable cable loss.)

How about an antenna which has a 75 ohm feedpoint resistance and no reactance, connected to the rig with a 50 ohm cable? A 50 ohm SWR meter at the rig will measure 1.5:1, regardless of the length of the coax. (Again, the actual reading will be a little less due to loss, and will decrease as the coax gets longer because then the loss gets greater.)

Actually I read your arguments and disagree with most and do not
appreciate the underlying attitude that 'you' know what is best for
'me'. The FCC is acting according to the will of the people (Congress)
and have provided compliance criteria where none has existed before.
From a safety professional's viewpoint, that should be a large
improvement, not "trouble" (in a practical sense, the very existence
of these new criteria is where the hams' 'trouble' will be, not the
fact that the criteria are not as *severe* as you would like them to
be). In my opinion, the FCC got this one just about right. Please, I
do not need your help in making my 100W station illegal. How many
microwatts would you think I can safety transmit out of ny G5RV?
Your message is alarmist. I must ask, where are all the bodies?

DIVISIONAL NEWS
AFFILIATED CLUBS CONFERFENCE 9-10 NOVEMBER1996

The NSW Division Conference of Clubs is to take place in Parramatta next weekend, the 9th and 10th of November.

Mr Bill Vlies the acting Manager SMA Sydney will be our guest speaker on the Saturday evening at the Conference.

ORANA REGION AMATEUR RADIO CLUB BI-MONTHLY MEETING
The Orana Region Amateur Radio Club bi-monthly meeting will be held on Thursday 28th November at 8 pm in the Scout Hall Talbragar Street Dubbo.

You have noticed the planting of Kilometres of glass out this way and wondered what telecom is doing this for. Well if you come to the meeting you will hear from one of telecoms employees how fibre optics work and ask questions on what you have been wanting to know for a long time on this communication medium..

--NSW Affiliated Clubs Officer, Ken Westerman VK2AGW Dunedoo.

The 1997 Call Book is now available from the Office. The price is $14.95. Discounted price to members is $13.00. If you want it posted to you, please add a further $2.50 for postage and packing.

WICEN NEWS
Either nothing is happening, or we are not being told of any new exercises, so this week's bulletin will be somewhat brief.

Apparently the only event this month is a meeting of Central Coast WICEN next Friday, the 8th November, at the Central Coast Rescue Squad shed in Rose St, Wyong.

Similarly, the only event next month would appear to be the Lion Island Speedboat Classic, on Sunday 15th December; the organiser for this event is not yet known.

Next year sees the Bridge to Bridge Speedboat Classic on 4th May; the Hawkesbury Emergency Expo, run by Alan VK2YYJ, is over 16th-18th May; the Hawkesbury Classic Paddle is organised as usual by Kevin VK2CKD over 18th-19th October (unfortunately the same weekend as JOTA, but this is not WICEN's fault); and the annual Bungonia Cave Rescue will tentatively be on the weekend following, over 25th-26th October.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Northern Rivers each Tuesday at 8pm around 3610 kHz on odd Tuesdays and the Lismore repeater 6800 on even Tuesdays, Hunter each Wednesday at 7.30pm on the Newcastle repeater 6900, and Central Coast each Thursday at 8.30pm on the Wyong repeater 7125. If there are any other regular nets then we'd like to hear about them.

WICEN (NSW) has an interactive Web page, and the Uniform Resource Locator is: "http://www.nsw.wicen.org.au/". It contains pointers to many emergency-related pages likely to be of interest.

-- Dave Horsfall VK2KFU, WICEN (NSW) Inc. Publicity Officer

The following article appeared recently in the Sun-Herald, and was faxed to us by Stephen Pall VK2PS and Tim VK2ZTM. Listeners might care to contact the ABC, the Sun-Herald and Young County Council, explaining to them the differences between an Amateur Radio aerial and a mobile phone tower...

"ROY GOES ON THE RAMPAGE

"John Doyle, better known as Triple J radio commentator and ABC TV's Club Buggery co-host Roy Slaven, has gone in to bat for his in-laws to try to block construction of a ham radio mast and aerial.

"Doyle told members of Young Council, in south-western NSW, that besides being unsightly, he had health concerns about the aerial.

"Councillor John Jasprizza described Doyle as "a blow-in" and said the council should approve the application. He later apologised.

"Mr Doyle was representing his wife's parents, Tom and Bonnie Skaines, who had lodged an official objection to construction of the aerial near their home at Young.

"The council deferred making a decision until its November meeting."

-- DENIS GREGORY in the Sun-Herald on 27th October

JOTA THANKS

We received a brief note this week which goes to evryone who took part in the recent Jamboree on the Air; it reads:

"Would you be kind enough to relay on the "Sunday Broadcast" the following "Thank You" from all the members of the Scout Association who participated in the "Jamboree On The Air" 1996.

"Thanking You,

"Ted Brien VK2BTB."

CLUB NEWS

WESTERN SYDNEY AMATEUR ASTRONOMICAL GROUP

The next general meeting of the WSAAG will be held on Wednesday the 20th of November at the Nepean Astronomy Centre Observatory, University of Western Sydney,Great Western Highway, Werrington at 7.30 pm.Talks are held on various aspects of astronomy.Visitors are welcome to join in.Meetings at this location are held every 3rd wednesday of the month at 7.30pm.

Our next observing nights will be held as usual at Linden Observatory, Linden Blue Mountains on Saturdays the 2nd and 9th of November, weather permitting.

Follow the Great Western Highway,turn off in Tollgate Drive and follow Linden Avenue to the end.Turn up before sunset.
Visitors are welcome to look through our various telescopes or clear a few ideas they had about our night sky or our Universe.If you ever wondered what astronomers get excited about ,this is your chance to find out.Tee,coffee and microwave facilities available on premises,bring your dinner.

For more information contact Paul VK2THN on (047)363261 ,AX.25 packet: VK2THN@VK2CZR or Internet Email: VK2THN@AMSAT.ORG
And this item was submitted by Paul VK2THN, WSAAG radio astronomy technical officer.

THE ANNUNAL AUCTION OF THE ILLAWARRA AMATEUR RADIO SOCIETY. WILL TAKE PLACE AT S.E.S BUILDING MONTAGUE STREET NORTH WOLLONGONG NOVEMBER 12TH. ALL ITEMS FOR AUCTION MUST BE BOOKED IN BEFORE 1915HRS. THE BUILDING WILL BE OPEN FROM 1830HRS. THERE WILL BE A LUCKY DOOR PRIZE OF A VHF TRANSCEIVER TO BE WON ON THE NIGHT.
SO TURN YOUR TRASH INTO CASH AT THIS AUCTION. THERE IS STILL TIME TO OBTAIN YOUR TICKET IN THE FT7B, F T (SEVEN) B, FOR ONLY $5 EACH. SO BRING ALONG YOUR CASH AND UNWANTED GODDIES TO THIS AUCTION. THERE WILL BE EXTRA COMMISSION CHARGED FOR LATE BOOKED IN ITEMS. SO BE EARLY. HOPE TO SEE YOU ALL THERE. IF YOU REQUIRE ANY

INFORMATION RE THE CLUB RING BRIAN ON 042 672296 AFTER
HOURS.

--BRIAN VK2UBF PUBLICITY OFFICER.

THE HORNSBY AND DISTRICTS AMATEUR RADIO CLUB
Our next meeting will be the informal get together on the 12-11-1996.
The Club is running c!asses again in 1997, for the Amateur Radio
Operators Certificate of Proficiency, with the classes commencing early
Febuary, if you are interested in becoming an Amateur Radio Operator,
give Tony VK2BTL a phone call on 9487-3383.

Or if you want any infomation about the Club write to
HADARC.Inc.
P.O. Box 362
Hornsby 2077.

You may prefer to phone the Publicity Officer John VK2WRT on 9807-2490.

--Submitted by John VK2WRT, Publicity Officer.

The next meeting of the Liverpool & Distict Amateur Radio Club will be held
at the Scout Camp on Cambridge Road Glenfield on Wednesday week the
13th of November at 7.30 P.M. for a prompt 8.00 P.M. start.

The last meeting where we had a workshop in setting up and tuning
transceivers and also calibrating members test gear was very successful
and we hope to repeat this activity at one of our meetings in the new year.
The lecture this month will be on amateur TV and will be delivered by Dave
VK2GIO who will also display some amateur TV gear.

Visitors are welcome, and directions for those who have not been to one of
our functions:

Cambridge Road runs off the Southern end of Moorebank Road (the road
through Holsworthy Army Camp). A LADARC sign will be placed near the
road side in front of the entrance gate to the Scout Camp.

--Garry VK2TSR for the Liverpool & District Amateur Radio Club

GLADESVILLE NEWS
The November monthly meeting of the Gladesville Amateur Radio Club will
be held on Monday week at Number 1a Birdwood Avenue, Lane Cove.
Details will be in the Newsletter, due for posting early this week.

Viewers of TELEVISION GLADESVILLE who watch via VK2RTV on
Channel 35 will be aware that there has been a drop in signal level during
the past couple of weeks. During this time the main transmitter has been
out of service for an overhaul and the lower powered standby unit has been
utilized.

Contact with the Gladesville club may be made in writing to P.O. Box 46.
Gladesville, 2111 or by telephone to (02) 9427-0530.

--Keith VK2ZZO President / T V Co-ordinator.

THE VHF DX GROUP IS AN INFORMAL GROUPING OF ACTIVE VHF AND UHF OPERATORS. THE GROUP WAS FORMED TO PROMOTE NON-REPEATER VHF ACTIVITY AND TO ASSIST NEWCOMERS TO THE BANDS

VHF DX GROUP MEETINGS ARE HELD EVERY SECOND MONTH AND CONSIST OF TECHNICAL LECTURES, EQUIPMENT DEMONSTRATIONS AND WORKSHOPS.

THE NEXT MEETING OF THE GROUP WILL BE ON TUESDAY 19 NOVEMBER AT AMATEUR RADIO HOUSE, WIGRAM STREET, PARRAMATTA

THE MEETING WILL BE DEVOTED TO A PRESENTATION ON HOW AN AVERAGE OR BETTER TWO METRE STATION CAN LISTEN FOR AND EVEN WORK STATIONS OFF THE MOON DURING THE ARRL EME CONTEST LATER IN NOVEMBER. TIMES, FREQUENCIES, OPERATING TIPS AND DEMO TAPES WILL BE AVAILABLE AT THEM MEETING

DON'T FORGET THE TUESDAY ACTIVITY NIGHTS ON 144 MHZ AND THE GROUP'S SUNDAY MORNING NET ON 146.550 MHZ FM STARTING AT 11.00 AM.

If you would like to submit a news item for inclusion in the weekly broadcast, please send it to us by one of the following means:

by post to the Divisional Office, PO Box 1066, Parramatta NSW 2124;
by fax to (02) 9633-1525;
by packet radio to BCAST@VK2WI.NSW.AUS.OC, or
by Internet e-mail to wiansw@sydney.dialix.oz.au

Please note that the deadline for news items is 2pm on the Friday
preceding the broadcast; if submitting news items by packet or internet,
please allow for forwarding delays in the network.

If submitting printed copy, please:

submit your news item on A4-size paper;
double space your text;
write on one side of the paper only, and
use a plain font such as "Arial" or "Helvetica", 12-point or larger. This is

especially important if sending your news item by fax.

Please avoid using abbreviations and shorthand, check your spelling,
grammar, and punctuation, and use the exact words you wish the
announcer to say on-air. Remember, the more care you take in preparing
your news item, the better the announcer will read it.

Hope this works - first time using a newsgroup. Also, just started
studying for Novice - don't mind learning Code - might even find it
relaxing who knows. From what I've observed there seems to be a lot of

controversy about code and overcrowding. Two thoughts come to mind - supposedly, within a couple of years, the Internet will be overcrowded - maybe radio won't need to be concerned; perhaps elimination of the answers to the tests may prove to be a better way to weed out those who aren't serious. Whose bright idea was it to provide test answers - the government's?

The APS put out a very similar report some months ago. (Bob Park was in
charge or at least his name appeared on the report.) To the best of my
knowledge, the APS isn't beholden to the DOE, Edison Institute, EPRI or
"the rest of the electrical industry".

Or has the APS no credibility in your book, either?

Hi !

I just learned from the friend i am going to visit and who's postal adress
i entered in FCC form 610A, that my reciprocal permit has been granted to
operate in the US (South florida) during my vacations from Dec 10th 96 till
January 9th 97.
Since i am going to bring my HT (ICOM Z1E with detachable front plate),
as far as i know that s the european equivalent to 'your' Z1A HT for 2m/70cm,
i d like to have some information about 2m/70cm repeaters in:

- Ft. Lauderdale/Miami
- Orlando
- Florida Keys

I am interested in:

- Frequencies
- Repeater shifts
- CTCSS subtones used.

My licence allows me to operate HF on all ham bands as well but i am not going
to bring any HF gear, it s just too bulky to carry on my vacation trip.
Anyway i am interested in Ham shops too, especially in Ft. Lauderdale, that s
the place i am going to stay during my vacations.

mni tx fer assistance ahead es looking fwd to talking to you...!

I have an AEA PK-232MBX multimode tnc for sale, asking $165

I also have a set of tnc's for the amateur 1200 baud PSK satellites.
These will only be sold as a set.
They are both Pac-Comm machines, a Tiny-2 and a PSK-1.
I have manuals and cables for all these tnc's.
Asking $155 for the Pac-Comm tnc's.

If interested E mail me at kf7jz@tiger.avana.net or
kf7jz@postoffice.worldnet.att.net

>Everything well stated. . After all, the contests like the premier CQ
>WW DX are 100% about DX, and if you do not care about DX, what
>business does a person have on HF, whose only advantage is skywave
>propagation?

I disagree.

I believe that there is more to making an HF contact, especially a DX
contact, than

"You're 5-9. What's your call? QRZ Contest."

I enjoy getting on HF and ragchewing with DX stations. I've spent many
an hour talking to European stations when I worked for an International
company that had sites in Europe.

Now, this is not to say that contesting should be banned. I don't
believe that. Contesting is one aspect of the hobby that some people
enjoy (not really for me).

The only objection I have to contests is they expand to occupy all
available band space. If propagation is excellent on 20 meters on a
contest weekend, I can just about forget about using my radio. >THAT<
I object to. Contesters and non-contesters should be able to co-exist.

I like to draw a parallel of contesting to Little League baseball.
Some people get too wrapped up in Little League. They loose sight of
the fact that the kids are there to have fun and play, especially the
ones that might not be all that good. Instead, these "parents" begin to
think about winning. That's all they can think about. Winning. So,
little Johnny who can't hit sits on the bench for the whole game
because the Coach doesn't want to risk putting him in the line-up.

Many ham contesters fit into the same mentality as these parents.
Its no longer about getting on HF and having a good time. Its about
scores. How many points can we rack up. Maybe we'll win. We have to
make our score better than last year. And so on.

Don,

I've been using DX4Win as my primary logging program. I was using DX-Base, but really wanted a Windows-based logging program. It has many features including contest mode, packet interface, cw keyboard, awards tracking and submission, etc.

I fully functional demo (will not save log, but will import you old one and let you play with the various features) can be downloaded at:

http://home.erols.com/pvander/

Best of luck in your hunt...

>transmit conversation to the scanner, the end result is not as clear as
>it could be.

Careful with them; you probably don't have a license to transmit there,
and you need a Tech or higher license for the Ramsey crap.

If the Xandi one is like the Ramsey FM-6, be very careful. It has *NO*
output filtering, and puts out spurs all over the place (every 12 MHz up
and down from the carrier and its harmonics) - assembled according to
their instructions, it is ILLEGAL to use, even with the appropriate
license.

(Note. I haven't seen the Xandi other than in their ads. When I called
and asked whether they made them on frequencies that hams are allowed to
transmit on, they trotted out the old "anyone can transmit anywhere under
100 mW" story that Nick Goss used to use. That was the old rule for the
FM broadcast band; it's now based in field strength at a certain distance
from the antenna.)

If you do have a ham license, and a *valid* use for the transmitter (no,
bugging a room won't do), look at Agrelo Engineering's transmitters. They
are great for telemetry, APRS, foxes, etc. All they need is a battery and
an ID'er (he sells voice IDers for foxes also), and they are well made,
and meet the FCC's emissions specs.

This info is completely incorrect and will ruin your radio:

Joesph Fenn <jfenn@spartacus.hula.net> wrote:
Okay heres the modification to Xmit on all fqcys for the IC751 (not
the
IC751A).
Remove bottom cover of IC750/751. Locate J3/P29 on logic board (to rear
of transceiver). Remove black wire from P-29, use a needle or pin to push
connector out of plug. Then cover pin with small piece of heat shrink
tubing. Verify that the black wire is connected to R52 as per schematic,
Replace bottom cover and away you go. Xmit from 200Khz down to 30Mhc or
thereabouts.....

This will cause grave overheating and result in a very expensive repair.

Another mod on same rig to increase power output to 100 watts on 28Mhz.
Remove bottom cover of IC750. Locate R21 on logic board. Either remove
it entirely or simply cut this resistor out of the sicruit.
Replace bottom cover.

This too will cause a great deal of damage. Shame on your Fenn for
attempting to post such a bad practical joke.

KH6JF (aka kilroy)

KH2PZ

I am delighted to say you are absolutely wrong Jeff. If you protect
your output stages in your rig with a line tuner so the RF cannot
backup into your rig NO PROBLEMO!!!!!!!!!!!!
I say you are unequivocably wrong!.
I have been using my IC751 on fqcys such as 4448khz/3353khz et al and
no problem whatsoever nor do I expect any. Of course if your tuner
(external) cant satisfy the proper XC and XR loading components then
thats a whole different ball game.

UHF-FM is probably your best bet. The new Family Radio Service (FRS) was created specifically for your situation. It is limited to low power, short range handhelds but it should be adequate for your stated needs. If you'd like to expand your family's communications possibilities without everyone taking a ham test, then GMRS may be for you. The General Mobile Radio Service allows higher powers, supports repeater range extension, can be mobile, handheld, or base installed, and can be tone-squelched (so you don't hear others on your freq).

Email me for more info.

112. Icom IC-2GXAT for trade

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-03 00:00:00 UTC
From: Dave Miller <aa4df@rose.net>
Message-ID: <327D3E5A.5D1F@rose.net>
Source record: 213628

I have an Icom IC-2GXAT in perfect condition which I don't need. I bought it new six months ago at the LIRC Hamfest in New York because my wife and I were preparing to do extensive traveling and I wanted it in the car for emergencies, and no emergencies occurred, so it has been used only twice (to test it). It has everything that comes in the original box including the original box itself, plus the optional DC power cord for use with an external supply, the optional "cigarette-lighter" power cord/regulator for automobile use, an extra charger (third-party), the operator's manual, and it has the BP-174 battery pack for 7 watt transmitter power level.

Thing is, I'm mic-shy. I've always been pretty much exclusively a CW and RTTY operator, and not too interested in FM (or AM or SSB, for that matter!) I'd like to trade the HT for HF radio equipment. Age doesn't matter, and electrical condition really only matters to the extent that the trade value assumed is realistic for the condition involved. The physical condition should be at least fair, and units MUST be "complete".

Any offers?

From: Mike <mikes@fishnet.net>
Message-ID: <327DA191.6D4@fishnet.net>
Source record: 213630

I was wondering if anyone has found a mod for the 6 meter,1.25 meter modules for the Yaesu FT-736R. I did the diode d27 mod on the board. Was a simple 30 fix, including removing the main tx board. I was looking at the service manual and noting that each module has the same set up as far as the main 10 pin connector goes. It seems that the book calls for the same type diode and has a letter reference, but I can not find what the letter is referenced to. Has anyone tried to install a diode in the same way as on the main tx board? Would experimenting with the diode cause damage to the modules?
Thanks, Mike

116. Looking for early Italian callbooks

Source record: 213632

My father, Walter G. Horn - i4MK, an OM pioneer of the radio in Italy and author of technical papers in QST and QEX, is writing a book about the beginnings of radioamateur transmissions in Italy.
Unfortunately, both ARI (italian branch of IARU) and ARRL are not able to provide any callbook of italian radioamateurs operating from 1935 to 1940 in Italy.
Such callbooks were destroyed during the II World War.
He would be happy to have OMs' assistance in looking for them.
He firmly believes such a callbook could be traced, perhaps as a part of international radioamateur callbooks of that period, in USA, so the aim to complete his laborious compilation could be attained.
Thanks in advance. 73 & 51.

117. Re: Los Angeles - Active\Popular Repeaters

John, you don't mean 147.435? :) (probably THE most heavily used in L.A.)

Brian,
I'd add another nice one with good coverage of the L.A. area; the Palos
Verdes machine, 145.38- no PL ...
Not especially busy, but nice people and QSO's encouraged.

Hope this helps es 73

Ohio/Penn DX Bulletin No. 277

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 277
BID: $OPDX.277
November 4, 1996
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, WD5N, KH6BZF, W6RGG, KF7AY, K8YSE, KA8MVJ, W9UI, WA0RJY, EY8MM, G3SXW, G4BUE & DX News Sheet, LU1BR, ON6TT, PS7AB and SM7PPK for the following DX information.

5X, UGANDA. Paul, 5X4F, is planning an all band (160 through 10) Multi-Single entry in the CQWWDX CW Contest from Arua in northwest Uganda. Operators are Dave/KE4EW, Dale/N3BNA and Paul/5X4F. Before the contest, Dave will be operating with the call 5X4DLI. QSL to KE4EW. The QSL Manager for 5X4F is now K3SW. Dave is helping Paul install a 60' tower. The Battle Creek Trapper will be hung off of the tower for 160 to 40 meters. An Explorer 14 will be installed on the tower. A SGC Solid state AMP will also be in operation on the lower bands. All power for the operation will be from a solar charged battery system.

5V, TONGO (UPDATE). Rodger, G3SXW, (Note the callsign change that was orginally announced 5V5A.) reports the 5V7A project for CQ World-Wide CW Contest is just about ready to roll. There are ten operators, six stations and 17 antennas in the multi-multi category: AA7NO, G3SXW, G4FAM, GM3YTS, K5VT, K7GE, KC7V, N7BG, W6RGG, WB7SRW. This is the same team that did TY5A (1995) and 9G5AA (1994). First departures are on November 13th, and the team will travel by road through Ivory Coast and Ghana to reach Togo. There will be some activity before the contest, while the team is testing antennas on various bands using their personal callsigns: AA7NO/5V7MB, G3SXW/5V7A, G4FAM/5V7FA, GM3YTS/5V7RF, K5VT/5V7VT, K7GE/5V7JL, KC7V/5V7MF, N7BG/5V7BG, and WB7SRW/5V7PN. They hope to be active on all bands including the WARC bands between November 20-24th. On 160 meters look for them low in the band. All activity will cease at the end of the contest as they will leave for home the next morning. News updates are posted frequently to the WWW Home Page:
http://www.getnet.com/~kf7ay/5v5a.html
QSLs for all the above call-signs go via home-call except for 5V7A which is via GM4AGL.

9M2, WEST MALAYSIA. The DXNS report Don, G3OZF, will be active November 7-10th as 9M2/G3OZF from Pangkor Island (IOTA AS-072). Activity will be on CW/SSB and 80-10 meters. QSL to CBA.

9U, BURUNDI. 9U5DX has been active over the past weekend on 15 meters (21285, 21291 and 21298 kHz) at various times (1230, 1300 and 1630z). QSL via F2VX.

C21, NAURU (Where will Martti, OH2BH, go next?). The well known DXer will be heading to C21-land for his birthday and will be active as C21BH. It is interesting that Nauru is the exact spelling of a Finnish word which, according to old popular Finnish wisdom, "it extends life in the spirit of a good life". The Finnish dictionary describes the word Nauru as a fit of laugher and an island republic in the Central Pacific.
So it was no surprise that Martti Laine, OH2BH, has invited his friends to share his 50th birthday in Nauru, in the spirit of Nauru. November 20th will mark the departure of his very special flight out of Manilla, the Phillipines, heading to Nauru Republic.
The festivities will begin 6 P.M. on November 20th at the Nauru Republic Government House, hosted by the Minister of Finance, H.E. Ruben James Kun, C21RK, and some signals may be expected out of Nauru on that same night.
Four stations, all signing C21BH, will hit the airwaves for a week.
They will be working the CQ WW DX Contest in the Multi/Multi setting, using three different sites with beam antennas. While Yaesu has provided the FT-1000MP transceivers and Cuschraft all the antennas, the amplifiers will be light weight briefcase ones succesfully used on many recent DXpeditions.
While SSB/CW will be mostly used on the frequencies that will be announced shortly, full RTTY capabilities will be on hand. All the activities will begin November 20th and end the 27th. These dates will include activity in the CQWW CW Contest. Operators will included: DU3YL, DU9RG, KJ4VH, K8YSE (a member of NODXA), JA1BK, JP1NWZ, OH1RY, OH2BC, OH2BE, OH2BH and SM7PKK. More detailed information will be released at a later day on SM7PKK Web-site:
http://home1.swipnet.se/~w-17565/dxis.html
ADDED NOTE: OPDX InterNet Subscribers will receive an additional bulletin of an unedited press release text copy from SM7PKK WEB page. Also, OPDX would like to wish Martti a happy and healthly 50th birthday.

DX USENET GROUP. Many still do not know about the DXer's UseNet group available via InterNet. Try: rec.radio.amateur.dx

HS0, THAILAND. Jack, WA0RJY, will be here from November 16th through December 1st. He plans to be in the CQWW CW Contest as a Single-Op all band entry with the callsign of HS0/WA0RJY or possibly as part of a Multi-Op team, but one way or another HS will be available during the contest. He states that he will definitely be active before and after the contest as HS0/WA0RJY. QSLs to Jack Fleming, POB 581, Seattle, WA 98111.

J6, ST. LUCIA. Bob, W9UI, reports members of SouthWest Ohio DX Association (SWODXA) will be active as J6DX for the CQWW DX CW Contest as a Multi/Single entry. The group will be active bewteen November 19th and December 1st.

Members will use their individual callsigns outside of the contest: (Names/callsigns/QSL routes) Bob/J68AE/WB8ENR/CBA; Steve/J68AG/WD8IXE/CBA; Dean/J68AH/AC0S/CBA; Kirk/J68AK/W8QID/CBA; Jack/J68AR/K9BQL/new address - Jack Ekstrom, 203 Juniper Drive, North Aurora, IL 60542; Scott/J68AS/N9AG/ CBA; Bob/J68ER/W9UI/CBA; and Traudel/J68TE (J6 call is uncertain and a call will be issued when she arrives in St Lucia.)/WD6CTL/CBA. The group plans to be active on 160-6 meters including the WARC bands with operations on CW, SSB, RTTY and the Satellites (HF). QSL routing for J6DX is via Scott Lehman, PO Box 803, Greenville, OH 45331 (this is the same for all the operations of J6DX over the past years) with an SASE or via the bureau.

KH6BZF'S PROPAGATION REPORT
THE GOOD NEWS: Possible 6 meter activity centered around 15-19th November. On November 5th and 12th, watch for Taurids Meteor Showers. On 17th November, watch for Leonids Meteor Shower and on 13th December, Geminids Meteor Shower, and Ursids Meteor Shower on the 22nd December 1996. Some good DX days may be expected on: 24-30 November; 1-2, 08-11 and 14-15 December, 1996. Watch and check for Long Path openings during this period. Expect 20-30-40-75/80 and 160 meters openings especially on the evening/darkness path.

SOME BAD NEWS: Expect some Coronal Hole Activity and accompanying Solar Winds between 15-19 November and centered around 06-07, 11-13 December, 1996. HAPPY HOLIDAYS AND GOOD DX HUNTING....LEE de KH6BZF

L75, ARGENTINA. Look for L75AA during the CQWW DX CW Contest. LU1BR and LU2AH are operating this special prefix celebrating the "Argentine Radio Club 75th Anniversary". QSL via LU4AA.

NEW OFFICERS DIRECTORS FOR "The Northern California DX Foundation" (NCDXF): President - Len Geraldi, K6ANP; Vice President - Bob Vallio, W6RGG; Secretary - Tom McShane, NW6P; Treasurer- Bruce Butler, W6OSP; Directors: Eric Edberg, W6DU; Jack Troster, W6ISQ; Dick Dievendorff, AA6MC; Rusty Epps, W6OAT; Dave Leeson, W6QHS; Steve Thomas, N6ST; and Lou Beaudet, K6TMB. The Board of Directors is assisted in many of the Foundation's projects by a group of Advisors. They are: Jim Maxwell, W6CF; Merle Parten, K6DC; Bob Fabry, N6EK; Ron Steiner, K6KEO; Bob Ferrero, W6RJ; Al Lotze, W6RQ; Bud Bane, W6WB; and Howard Brainen, WZ6Z. A newsletter published twice a year is edited by Steve Thomas, N6ST, and is mailed to all Foundation members. For further information on the Foundation, please check out their Web-site at: http://www.ncdxf.org

OPDX INTERNET SUBSCRIBERS will receive the following additional information: C21 Press Release and VK0 Heard Island Update.

PACIFIC DXPEDITION. According to the "DX News Sheet", Ed, K8VIR, plans to be active from FW, VK9, YJ, ZK2 and ZL7 during the next few months if band conditions are favorable. Dates and times were not reported and hopefully they will be forwarded to OPDX before Ed begins his trip. Stay tuned!

PY1, PAQUETA ISLAND, BRAZIL (DIB-026 - NOT IOTA Island !!!). Look for PY1AF/p and PY1ADU/p between November 15-17th. Activity will be on all

bands and CW/SSB. Also, look for them on the Brazilian DX Net, Sat/Sun,
14222 kHz at 1900-2100z. QSL via PY1AF (Bureau).

QSL NEWS AND INFORMATION.....
All QSLs for EY1ZA, EY50V, EY2Q, EY8CQ/R3Q, EY8AB, UJ8JCQ, RJ8JAB
must be sent via EY8CQ. The direct address is Alex Rubtsov, box 32,
Moscow, 117449, Russia or via Tajik Amateur Radio League Bureau.

VP5, TURKS AND CAICOS ISLANDS. Dave, WD5N, will be active in the CQWW DX
CW Contest (November 23-24th) as VP5EA. He will be active a few days
before and after as VP5/WD5N. QSL via WD5N, to 1997 CBA ONLY:
103 Osage Dr., Leander, TX 78641 (or via W5 bureau).

XU, KAMPUCHEA (CAMBODIA). Following his activities from XX9-land with
(OH2BH and crew) Pekka, OH2BVF, flew on Tuesday morning, October 29th,
directly to Cambodia for a one-week stay. In Phnom Penh he was active as
XU6WV and operated mainly on CW. Reports state that all of the low-band
antennas used at XX9X were transported to Phnom Penh. He will probably
be QRT by the time you read this. QSLs to: Pekka Holstila, OH2BVF,
Linnaistent 7, SF-01640 Vantaa, FINLAND

I'm interested in learning more about "corruption scandles in the 70's at the FCC" I often wondered how someone who had the call W7CAF could have gotten a new one by two K7 call which perfectly matched his two initials. Guess I wasn't paying attention to the rumors. Can anyone post further information on this?

Interesting. To paraphrase George Santayana, "Those who are ignorant of history are doomed to repeat its mistakes." Nine days post-completion of data entry involving 4,500 records with 25 sortable fields. No results. Is it reasonable to be suspicious that the FCC could be "cooking" the callsigns again?

Everything well stated. . After all, the contests like the premier CQ WW DX are 100% about DX, and if you do not care about DX, what business does a person have on HF, whose only advantage is skywave propagation?

What is this world coming to, with HF hams badmouthing contests?

Are they one and the same as the anti-CW extremists? Probably so.

A ham who is not interested in CQ WW DX is like:

1) A baseball player who dislikes the world series.

2) An experimental aircraft enthusiast who dislikes the Oshkosh air show.

3) A PC manufacturer who dislikes comdex.

...and many, many more examples can be stated.

Many "Hams" who dislike contests are probably died in the wool anti-code GIGA-SQUIRTS (c) who know nothing about HF and spend much of their time ordering pizzas on the autopatch or otherwise avoiding the costs of a cellular phone. Other "Hams" who dislike contests are often found on the WARC bands complaining about whatever contest is occurring, on any given weekend, occupying valuable spectrum space that serious hams need to communicate truly technical information. (Thanks for the term, Jim).

Our bands are being threatened, antenna, and RF-power, restrictions are
being considered. If you have something to say that will further ham radio
interests, you can quickly and easily e-mail your representatives on these
issues. at

http://www.sarrio

I offer a complete list of Senatorial and Congressional e-mail links to
all members of Congress that receive e-mail

I would suggest,however,that if you e-mail Congress, that you limit your
e-mails to only your own district representative or state senator. Include
your name and address, this will inform your representative that you are
one of his/her constituent and he/she will be far more likely to seriously
consider your letter. Also try to be civil and informative in your
message, remember we need their support.

Hi Kenneth,

I got my novice ticket in '62, and my general in '63. To answer your question, yes there is a straight key night, still! And yes, the anti-coders are still hammering away, also! The reason for the animosity, is that they are so frustrated at not getting their way after all these years they have been at it!

Who are the most important manufacturers of PIN diodes ?

Can you give me examples for a TR switch in the 100 W range at 150 MHz ?

Can a slow rectifier be a low cost replacement for a PIN diode ?

Many thanks.

John Ackermann AG9V

jra@lawdept.daytonOH.ncr.com -or- jra@ag9v.ampr.org

My primary interests are in packet radio network building
(particularly higher speed stuff) and TCP/IP. I've got quite a lot of
info on using the Kantronics D4-10 19.2kB radios, as that's the
hardware we've been struggling with here.

TAPR (Tucson Amateur Packet Radio) has formed a special interest group
to discuss issues of regional packet networking (Net-SIG). As a
result, the TAPR net-sig mailing list was born, and is now ready for
operation.

This list is <not> intended to replace any of the existing
packet-related mailing lists. Its purpose is provide a medium for
communications among those interested in packet radio networking, both
dealing with technical issues and political/regulatory ones. We'll
discuss things like how the potential 219MHz band will fit into the
networking picture, how to link areas using different networking
schemes, how to set network parameters, etc. The list's charter will
be posted there regularly.

The address of the list is net-sig@tapr.org and you can subscribe by
sending mail to listserv@tapr.org with the text "join netsig".

Apart from subscribing to the list, you can contact me for further
details about the Net-SIG (including upcoming conferences).

Joint ampr.org IP Coordinator for Ohio subnet (44.070.xxx.xxx)

Please direct all correspondence regarding the assignment of ampr.org IP numbers in Ohio to:

ipaddr@ag9v.ampr.org

which is a mailing list read by a team of coordinators.

[Editor's note: All ampr.org coordinators are listed in the document at:

ftp://ftp.ucsd.edu/hamradio/amprnets

]

Chuck Adams K5FO

adams@sgi.com

Maintainer of Standardized Info Sheets on QRP Rigs

They are available from the QRP-L WWW Pages at:

* http://qrp.cc.nd.edu/QRP-L/index.html
* http://www.lehigh.edu/lists/Archives/qrp-l/ (on or after June 1, 1995)

Owner of QRP-L Mailing List

The QRP mailing list is open for discussion of any subjects relating to low-power amateur radio operation. Example topics: portable operation, equipment design and construction, solar and battery power, QRPp, contesting, kit building, etc.

This list was started by me with an announcement on the rec.radio.amateur.misc USENET group in early 1993. Bruce Walker, WT1M, maintained the mailing lists and FTP area from then through August 1994 on a system at Thinking Machines Inc., think.com. Then it was moved to qrp-l@netcom.com until May 14th, 1995. Thanks to Mike Ardai, N1IST, for all his hard work during the time that QRP-L was on netcom.com.

I am still the keeper of the non-electronic archives, including copies of some schematics, etc. Contact me directly or watch this list for more info.

To subscribe, send E-mail to:

listserv@lehigh.edu

and in the body of the message, write:

SUBSCRIBE QRP-L your_name your_call

where "your_name" is your real name, and "your_call" is your callsign,
if any. For example:

SUBSCRIBE QRP-L John Doe K5FJZ

A welcome message with more detailed help will follow shortly.

To unsubscribe, type:

UNSUBSCRIBE QRP-L

Edward Addy KE0EG

eaddy@nacec.org

Executive Director, North American Center for Emergency Communications

After a large disaster strikes your community and your family, I am
sure you will agree that its a little late to start building a massive
rapid response, emergency communications system supported by thousands
of people within companies, organizations and serving as volunteers to
provide essential support services.

We are the North American Center For Emergency Communications Inc.
(NACEC), a federally-registered non-profit organization serving North
America since 1992. We have been developing a system that merges many
different technologies to create a unique, high-capacity,
rapidly-deployable solution to the problem of communications outages
and shortages that occur following a large disaster. Our volunteer
network in using the Internet as its communications backbone, is
itself using one of the many technologies employed in NACEC's overall
solution.

To help ensure the greatest possible effectiveness in as many
communities as possible throughout North America, we are developing a
very large volunteer network of community volunteers (Community

Ambassadors) who work with our staff and their local communities. If you are community active and are interested in helping, we need your help, NOW. Please, don't wait until disaster strikes, help us to be prepared and be ready to assist your community.

The more communities that are represented by our volunteer network, the more effective we can be in disaster preparedness, emergency operations and in the area of emergency and military family message handling and delivery.

As a NACEC volunteer (Community Ambassador) you will assist with the movement of information that is vital to the continued success and growth of this organization and the survivability of your family and your community following a large disaster.

This project is growing rapidly, as we locate and add new dedicated volunteers from as many communities as possible from across North America. I hope you will join us in making this organization a success.

To find out more about how you can get involved in this project and use your Internet skills to help your community, please review the information that is in our WWW Homepage area which can be found at:

http://www.nacec.org/

An electronic volunteer application form can also be found there as well. Should you have any questions, please address them to my E-mail address above.

To join any or all of the above:

Send a message to:

majordomo@netcom.com

In the body of the message, type:

subscribe list_you_want

Since there appears to be no hope that Netcom will ever improve its mailing list services, w1aw-list has been moved to a server down at ARRL headquarters. See Jeff Bauer's entry for more information if you wish to continue to receive W1AW bulletins.

There is no need to unsubscribe from the Netcom list. I'll take care of that myself.

Thanks again for your support and patience with my w1aw-list over the years. Note that this change will not affect any of the other ham-radio related lists at Netcom.

Author of the following MS-DOS ham programs:

* AutoExam - Examination simulator and study aid
* AutoCW - Morse Code practice program
* DOSGATE - allows users to run programs on your PC remotely (AutoExam compatible)
* AutoCall - Allows use of the Buckmaster HAMCALL CDROM online callbook with DOSGATE
* AutoFax - Allows reception of weather fax using Kantronics TNC's
* SeeSats - Real time satellite tracking (text only), DOSGATE compatible

Most of these programs are available via anonymous FTP from:

* ftp://oak.oakland.edu/SimTel/msdos/hamradio/
* ftp://wuarchive.wustl.edu/systems/msdos/msdos/hamradio/

or write me at:

7 Redfield Circle
Derry, NH 03038

and enclose:

* A FORMATTED high density diskette (either 1.44 MB or 1.2 MB; 3.5" or 5.25").
* A Self Addressed STAMPED return diskette mailer.
* A note explaining that you want a copy of AutoExam and/or AutoCW (or one of the other programs).

I am always receptive to individuals interested in maintenance, enhancements, and non-commercial distribution for these shareware programs.

Devon Bowen KA2NRC

bowen@olsen.ch

Maintainer of the rec.radio.amateur.* Supplemental Archives available from:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/

[Editor's Note: Fixes have recently been made to the FTP software at this site so that the above URL will now work with most Web browsers.]

Maintainer of the Internet Ham Radio Callbook Server at:

telnet://callsign.cs.buffalo.edu:2000/

For further information about the Callbook Server, please consult the server's help facility, the rec.radio.amateur.misc FAQ, or additional server documentation at:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/faq_callsign

Well, I've been talking about it for years. Those of you that have talked with me via E-mail know that. But this time I've actually started on my rewrite of the callsign server at Buffalo. And I've finally got a design that I'm happy with. The new searching capabilities are going to be *much* improved over the current system. I'll be getting rid of the bugs in the current telnet system and making it available to more people. Also coming is a WWW front-end for web surfers. Time to step into the 90s.

Part of the rewrite is an entire reorganization of the database look-up system. The old system was very specific to the FCC database format because that's all that was available when it was written (yes, the server is very, very old). But now there are a number of databases floating around the net for different countries and I am rewriting the system to be more flexible and to accommodate a variety of formats and search types.

In doing so, I'll have the ability to add data for many more countries. That is, of course, if I have the data. In order to do this I need help. I need to get in touch with all people that have access to databases from countries other than the US. The more up-to-date these databases are, the better. If you have access to a database and would be willing to donate a copy to the callsign server for everyone to use, please contact me. A lot of people would genuinely appreciate it.

The callsign server has become remarkably popular on the net and this has happened because the community has contributed so much to it over

the many years it's been running. I have heard stories of reunions with old classmates, stories of silent-keys that have been remembered, and stories from blind hams doing simple look-ups of other hams, all possible because of the server. Congratulations to the community for making this system so useful.

Work on this project has been delayed such that its completion time is somewhere in the indefinite future. In the meantime you can access the current server.

Please direct all other feedback, submissions and administrivia regarding these services to my E-mail address above.

My electronics expertise is mostly analog, but I have some insights into DSP applications that can do better in what used to be the analog dominions. I can be of the most help with low-frequency analog stuff, particularly measurements and low-level/low-noise/low-distortion applications. I breadboard with IC's, discretes, and surface mounts (which I prefer to use now, as surface mounting requires less drilling of PCB boards once they are etched). My electrical engineering education (Ph.D.) emphasized control systems. I also have a clear understanding of transmission line measurements and behavior (a personal research interest for the last 25 years or so).

Rusty Carruth N7IKQ

Rusty Carruth aka N7IKQ aka rusty@indirect.com (NIC: RC541)

The Phoenix Linux User's group has formed! Details: me.
Join the Usenet Un-Net: 1700-1900Z Saturdays, 28.410 or 28.390 MHz

I'm willing to act as a reference for anyone wanting info on getting tapes (especially Callsign tapes) from the Department of Commerce National Technical Information Service (NTIS) or wanting other info on callsign-project related stuff.

One of these days I'll actually be around for the un-net! I promise, really!

My job is currently System Administrator for a large Unix site so I know a little bit about day-to-day Unix operations and Unix installation :-) I also have much experience with constructing E-mail paths that will work rather than bounce.

I also have a fair amount of experience in hardware/software interfacing and machine control.

UNSUBSCRIBE tenten-l

(10-X International is an amateur radio organization devoted to encouraging the use of the 10 Meter, or 28 MHz, amateur band. They are primarily known for their "10-X" numbers which members exchange during communications on that band.)

I serve as an Educational Advisor to ARRL and hence fall within the loose bounds of their field organization. I know something of the fundamentals in electronics, having written the current Chapter 6 of the 1995 ARRL Handbook, and something of antennas, with a series appearing in Communications Quarterly. I serve on the Board of Directors of 10-X International and maintain memberships in most of the QRP organizations, as well as the Quarter Century Wireless Association (QCWA). As to what I do not know, there are no limits.

I also know something of the craft of technical writing and editing, being director of Techwright, an occasional consulting operation in this field with my wife, Jean, N4TZP, who has been a technical editor and writer since 1980.

(Exams for Del Norte County every other month)

I've been a ham since 1933. I taught electronics, AC, DC, and radar principles/theory at the U.S. Army Signal Corps School at Fort Monmouth, NJ during World War II. I was chief engineer at KDB in Santa Barbara, CA from 1946 to 1951. I was engineer and technical director at NBC TV studios in Hollywood and Burbank from 1951 to 1982. I have one student now going for his General and prefer to teach the overall picture. I have done little or no benchwork on new equipment in the last 15 years. I'm still learning digital theory and techniques, but boards filled with chips do not evoke a sense of familiarity or recognition. I'm also still learning about the Internet.

GRAPES 56 kBaud Packet Radio Modems

I'm not an official representative of the Georgia Radio Amateur Packet Enthusiasts Society (GRAPES), but I am in contact with them, and have experience using their 56 kBaud radio modems. At the very least, I can forward requests I can't handle to the proper people.

The Proceedings of the 6th Computer Networking Conference has a paper by WA4DSY explaining the theory and practice of the 56 kBaud radio modem. (I think it's the 6th, I don't have my copy handy.)

GRAPES furnishes instructions for modifying a TNC2 to drive the modem, but there are better solutions. The Ottawa PI card and the Gracilis PacketTwin card are two good solutions. Of course they are PC bus cards. If you need standalone capability, the Kantronics Data Engine can handle it, as can the incredible Gracilis PacketTen. PacComm claims their new Sprint TNC can, too (PacComm now also manufactures the Gracilis cards under license and you can get them either from them or from Gracilis direct).

WA4DSY has interfaced raw telco codecs to the modems and done "digital voice" while mobile. It works quite well.

If you want information on the RF modem (full document sets are $20 US, creditable towards a later order) write to GRAPES at

GRAPES, Inc
PO Box 636
Griffin, GA 30224-0636

GRAPES is a volunteer networking organization. There's no phone number, and turnaround on info requests may be slower than when dealing with commercial outfits. Please cut the volunteers a little slack.

(The GRAPES WWW Home Page is moving to its own dedicated machine at a new ISP. This will give GRAPES direct T1 access to the Internet. It will provide comprehensive GRAPES information, support, and online ordering facilities. I'm told this will all be up and running in a few weeks. Bruce Nebergeld and Dennis Barrow, both former GRAPES presidents and net wizards, are spearheading this effort.)

Derrick C. Cole KC4WEJ

dcc@ssds.com

I'm a Network/Systems Analyst with a national systems integration firm. My professional fortes are UNIX-based system administration, sendmail, TCP/IP-based ethernet network engineering, network systems security (including firewalls), and programming (primarily Perl and C).

I've had notable success dealing with issues surrounding PC's, DOS, Windows and various applications/protocol stacks, including PC-NFS and

LAN Workplace.

I'm still clueless in the electrical/circuit department.

William (Bill) Coyle N3OGH

wcoyle@iss.dccc.edu

AX.25: N3OGH@AA3CH.EPA.USA.NA

My primary experience is with HF communications, particularly with the Kenwood TS-830S and TS-940/AT. My preferred mode is CW, although I also use SSB. I have had experience with light service on both rigs (including the internal antenna tuner on the 940 and the tube finals on the 830). I have the service manual for the 940.

I am particularly interested in helping new hams design and set up HF stations with multi-band wire antenna arrays.

Other than HF, I am also involved in VHF and UHF, particularly 2 meters, and have recently gotten involved in packet radio (having gained some experience on the hardware end of setting up such a station).

Michael Crick

mica@crick.com

Bellevue, WA

http://crick.com/mica/

I design and write software. I have written a top of the line Ham Radio training program for Windows called "Ham University". You can download a free demo copy from my web site.

I also helped write Microsoft Windows. I am not a ham operator but more of a web nut (I was part of the group at BBN that developed the ARPANET back in 1967). However, in designing Ham University, I got a lot of expert advice. I think it will meet many people's training needs.

132. An Internet Ham Radio Quiz

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-04 00:00:00 UTC
From: pacrimgolf@kuentos.guam.net
Message-ID: <55ksj3$psb@lehi.kuentos.guam.net>
Source record: 213462
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

Be happy, don't worry, it's multiple choice, just like the ham tests.....
Study Guides are available in the archives at Deja Vu.

QUESTION NUMBER ONE:

Who is SQUIGGY ?

A) The newsgroup poster from hell.

B) An abused child, who's extra class father regularly pounded
his buttocks with a piece of brass and tied him up in the closet
with a 40 meter dipole.

C) A reincarnation of Samuel Morse with a Woodie.

D) Dick Bash's step son.

E) Carl The Anti Code. Freedom Fighter and Savior of The Codeless EE's.

Answer will appear on specially marked packages of Code Tapes,
which may be available at your local ham club meeting or from various
VE teams around the world. Japanese tapes available from the
VE team in Tokyo.

QUESTION NUMBER TWO

SQUIGNORANCE is:

A) The inability to copy Morse Code.

B) The inablitiy to hear Morse Code signals on HF, even when they exist.

C) The tendency to call someone a 'bigoted asshole' and then accuse him
of calling you one.

D) The tendency to loose factual information, especially when asked to
produce it.

E) All of the above.

If you picked one of the first four answers, you are close. Keep trying.
If you picked E, you don't need code tapes. If you pick your nose, email
The Squiggie and Lenny Tap Dance Show - they are always looking for
new dancers.

Have a nice week.

Hello everyone. I'm a Tech Plus and have been licenced for about four months. Does anyone know of a web site that has a ver complete list (similar to a book) that is either ARRL certified or TASMA certified?

If so please post here or better yet e-mail me!

Thanks,
Scott, KF6FCN

135. Re: Pro Code and No Code Debate

> PS Flame killer turned on!--))
>

Well, if you get any it won't be from me...:) What you're describing is what
I thought we had. But maybe i'm confusing your proposal. With 5 wpm there
are hf sections open which are in large part for "practice" to increase
speed. I do sympathize as there are some people who, for a variety of reasons,
have great trouble getting started with learning cw. Forget about the "debate"
for now. If things change, they change. But for the time being you may
want to try again, using a combination of methods:

PC programs-critical for me. Morse Academy or Supermorse

Tapes-used appropriately (a variety to defeat any memorization). I like the ARRL
and Jerry Zilniak (sp) versions.

Farnsworth Method-keep the character speed up. In fact, you may want to learn at 22-25 wpm
to start with, but 2 characters a day...name for that method also, but it escapes me.

If you drive to work, listen on your way to work, especially tape 2, side b, of Zilniaks
tapes.
Its good for drill and helps to make it auto reflex.

If you do this DAILY, perhaps 2x per day, unless you have some other type of problem, you
should
be able to paste the 5wpm (and maybe even the 13wpm) fairly quickly: say a month.

If i can be of any help, please let me know...73.

> PS Flame killer turned on!--))
>

Well, if you get any it won't be from me...:) What you're describing is what
I thought we had. But maybe i'm confusing your proposal. With 5 wpm there
are hf sections open which are in large part for "practice" to increase
speed. I do sympathize as there are some people who, for a variety of reasons,
have great trouble getting started with learning cw. Forget about the "debate"
for now. If things change, they change. But for the time being you may
want to try again, using a combination of methods:

PC programs-critical for me. Morse Academy or Supermorse

Tapes-used appropriately (a variety to defeat any memorization). I like the ARRL
and Jerry Zilniak (sp) versions.

Farnsworth Method-keep the character speed up. In fact, you may want to learn at 22-25 wpm
to start with, but 2 characters a day...name for that method also, but it escapes me.

If you drive to work, listen on your way to work, especially tape 2, side b, of Zilniaks
tapes.
Its good for drill and helps to make it auto reflex.

If you do this DAILY, perhaps 2x per day, unless you have some other type of problem, you
should
be able to paste the 5wpm (and maybe even the 13wpm) fairly quickly: say a month.

If i can be of any help, please let me know...73.

Hi Ken,

Which answer do you want?

The 'something for nothing' or the 'it's an outmoded....blah, blah' ???

I believe straight key night will still be here with the old diehards.

Author of the QRZ! Ham Radio CDROM

I am interested in receiving amateur-radio-related public-domain and/or shareware programs, data bfiles, frequency lists, etc., that would make a useful edition to the QRZ! CDROM. Can help arrange volume discounts for clubs and groups, and will donate copies of QRZ! to qualifying non-profit organizations. Send E-mail or call +1 602 483-2036.

We now have the QRZ! FTP archive and QRZ! WWW server online, 24 hours a day. Our connection is via a T1 line so you should get pretty decent file transfer times.

We've got about 7,000 files online, including radio mods, software, most everything imaginable. We are also accepting uploads of all ham radio related material.

Feel free to stop by and have a look:

* ftp://ftp.qrz.com/
* http://www.qrz.com/ (WWW interface to the FTP archive as well as a Callsign database server)

Authors of ham radio shareware programs, data files, mods, etc., are invited to contribute their materials to the QRZ! anonymous ftp server above.

I would also like to thank those who have volunteered in helping port the QRZ! source code to a wide variety of platforms. In the next edition, we'll have support for DOS, Windows, OS/2, Windows NT, Sun, NeXT, SGI, Linux, AIX, and HP/UX executables, directly on the disk.

Notably not mentioned is Macintosh, which so far has been a bit troublesome to put together. If anyone who can program in 'C' on a Macintosh would care to volunteer, please let me know. Although there is an experimental Mac interface at this time, I'd like to make it an officially-supported platform.

The QRZ! Callsign/E-mail Registry now contains over 4100 callsign-to-E-mail-address listings and is growing daily.

We have a WWW page where you can input your E-mail address directly into the QRZ! Callsign Database, where it will be published on both CDROM and on the Internet. When you use this page, your E-mail address is made instantly available to the online database.

Everyone is encouraged to check in and add their E-mail address to the server. There are no charges or listing fees, and it's free to all radio amateurs. The procedure takes only a second, and you are only asked to supply your callsign and E-mail address.

Register your E-mail address today!

We're pleased to announce that the online FCC database at qrz.com is now updated nightly from the FCC with fresh information.

According to FCC rules, if you've just passed your first test, you can begin operating as soon as your callsign shows up in the online database.

Please pass on any ideas, suggestions, comments, etc., to my E-mail address above.

Luther M. Lord N4DA

n4da@mindspring.com

If you need a good place to get your amateur radio repaired, I can help. Visit the Radio Doctor's home page at:

http://www.mindspring.com/~n4da/top.html

I will answer all technical questions received via E-Mail at my address above. This service is offered presently at no charge.

Dean R. Madsen KE0WO

Dean R Madsen, KE0WO Computer Science Major
Internet: dmadsen@iastate.edu Iowa State University
ke0wo@iastate.edu Ames, Iowa
AX25: KE0WO @ KE0WO.#NWIA.IA.USA.NA
Secretary for the Tristate Amateur Packet Association
Treasurer for the Cyclone Amateur Radio Club

A few members of our ham radio club were interested in helping out. Since our turnover is usually 4 years or so (graduation is a horrible thing), I thought it may be difficult for us to keep the list up to date. I thought that by creating a local mailing list called elmers@iastate.edu we could add or remove people as need be. There would always be at least one person receiving mail on that list, usually more! Even after I graduate, this list will be maintained

allowing ISU hams to easily help others.

Currently we have people with packet experience, some HF experience, much repeater experience, in addition to a considerable background in theory, as many here are electrical engineering or computer engineering students. If a question can not be answered by the readers of the list, there are many other local hams that could be prodded for the info.

Our local ham radio club has been especially interested in helping local disabled hams (or hams to be) get on the air. But anyone local who needed help would find a group at their door ready to work.

Fred O. Maia W5YI

3511297@mcimail.com

The W5YI Group, Inc.
P.O. Box 565101
Dallas, Texas 75356
Tel. +1 817 461-6443

This firm consists of two separate divisions:

EDUCATION DIVISION:

Develops and distributes amateur radio self-training materials, including the Gordon West/WB6NOA line of audio, video, computer software and printed study materials. Credit card orders and information from (toll free): +1 800 669-W5YI (9594). All materials are guaranteed current and shipped within 24 hours with 2-day priority delivery. They offer a special discount for instructors conducting training classes.

W5YI Amateur Radio written license exam and Morse code training products are also available from every Radio Shack nationwide. Color photograghs of the major training products are available at their Express Order or Radio Shack Unlimited desk.

THE W5YI-VEC:

Coordinates the activities of more than one thousand volunteer examining teams world-wide. The locations of test sites near you can be determined by calling +1 817 461-4663 anytime, including evenings and weekends. Any General, Advanced or Extra Class amateur may form their own VE team by calling +1 817 860-3800 during normal business hours.

All examination results are electronically filed with the FCC. Amateur radio licenses and call signs are normally issued within 48 hours of VEC receipt of the examination paperwork. New amateurs may determine their call signs by calling the FCC's toll free consumer assistance line: +1 800 322-1117.

Co-Host - Ham Radio and More

Ham Radio and More is available for free to any AM station that is
willing to run it with national ads intact. If you want there to be a
nationwide amateur radio talk show, call your local station and ask
them to get the program. They don't have to be part of the Talk
America network. They can call KFNN in Phoenix (+1 602 241-1510) or
Talk America at +1 508 460-0588.

Effective 4/7/96: WWCR shortwave will air the show LIVE each Sunday at 6:00pm ET, (2200 UTC) on 7.435 MHz AND 12.160 MHz. Also, tape delayed at 5:00am ET (0900 UTC) Mondays on 3.315 MHz and Saturdays at noon ET (1600 UTC) on 12.160 MHz.

Call in and be part of the show. The toll free number is +1 800 293-5366 and outside the country at +1 602 230-2755. Fax at +1 602 241-1540.

See the entry for Cheyenne Greatorex for the Ham Radio and More World-Wide Web Page.

Lyndon Nerenberg VE7TCP, VE6BBM

lyndon@ve7tcp.ampr.org

I'm heavily involved in Internet Protocol (IP) networking over packet,
as well as system administration of UNIX and UNIX-like operating

systems (with an emphasis on networking, E-mail, etc.). My current concentration is on writing UNIX based tools (e.g. software for logging, antenna design, propagation analysis) that can be shared throughout the ham community.

I also maintain the ve7tcp.ampr.org server. This system hosts a variety of ham-radio related mailing lists as well as a comprehensive World-Wide Web site and FTP archive, and was one of the first Internet servers dedicated to ham radio. The system is also a hub site for the ampr.* newsgroups.

Information on the mailing lists offered can be had by sending an e-mail message to:

listserv@ve7tcp.ampr.org

containing (only) the word:

INFO

in the message body. The WWW server is located at the URL:

http://ve7tcp.ampr.org/

and the FTP server resides at:

ftp://ve7tcp.ampr.org/

Direct login access to the system is available to anyone holding a currently valid amateur radio license. The server provides a number of useful tools for the radio amateur, including satellite tracking software, CAD design software, SPICE, and other tools not generally available to people running on Microsoft Windows or Apple based PC's. (It runs 4.4BSD UNIX.) To obtain a login on the server, send a photocopy of your current amateur license, along with a SAE and IRC to:

Lyndon Nerenberg
1804 Juniper Street
Prince George, British Columbia
Canada V2L 1N7

Your login and password information will be mailed to the address listed on your license.

Maintainer of the Internet DX Mailing List

To subscribe, send an E-mail request to:

dx-REQUEST@ve7tcp.ampr.org

with the following line in the message body:

David Newkirk W9VES

webmaster@arrl.org

American Radio Relay League (ARRL) Webmaster

The American Radio Relay League is pleased to announce the startup of ARRLWeb, your League's new HQ-based World-Wide Web site, at the URL

http://www.arrl.org/

ARRLWeb will serve as an essential Internet resource for active hams, carrying ARRL news, details on upcoming hamfests, conventions and Amateur Radio examinations, the ARRL Publications catalog, information of ARRL membership benefits and services, and more.

In inaugurating this new service, the League thanks Scott Ehrlich, WY1Z, and the other Boston Amateur Radio Club volunteers who've worked since December 1994 to keep ARRL up and coming on the Web via the ARRL home page they installed and maintained at oak.oakland.edu. Their volunteerism helped show us that upgrading our Internet connection to a level that allowed on-campus Web service would be essential to ARRL's mission of serving Amateur Radio.

Your comments, criticism and suggestions on how to make ARRLWeb bigger and better are *essential* to its ongoing success, so please drop by and say hello!

Bob Nielsen W6SWE

Bob Nielsen, W6SWE Internet: w6swe@tapr.org
Tucson, AZ AMPRnet: w6swe@w6swe.ampr.org
[44.124.12.16] AX.25: W6SWE@WB7TLS.AZ.USA.NA

Tucson Amateur Packet Radio (TAPR)

I am no longer a TAPR officer, but try to help out with the TAPR file server and am the "official" contact person on the Internet and CompuServe (71540,2364).

To access the TAPR file server, send E-mail to:

file-request@tapr.org

To get the help file and a list of available files, send the following commands in the body of the message:

help
dir
quit

All mail sent to that address is not read by a human. Conversely, mail sent to tapr@tapr.org is read by a human who will be glad to take your orders or process membership applications, but cannot send you file server files.

Avid SW/MW DX'er for the last 30+ years

My main area of expertise is low-power (under 1 kW) Latin American Broadcasters, but I keep up-to-date on the current trends and events affecting broadcasters world-wide (i.e., I was recently asked about a station engineer who was working at ELBC in Monrovia, Liberia and was able to pass on information that the engineer was currently working in Gabon.) My other keen interest is Clandestine Broadcasters (not pirates).

Though intentional signal jamming isn't as much of a problem as it was during the "cold war," I co-authored a report titled "THE WOODPECKER PROJECT" which was presented at an ITU convention. I still use those skills now and then to DF CB'ers running illegal power, and your odd "bad-ham."

I have a collection of service information and literature dating back
to the 1920's. I will be happy to assist those needing copies of
out-of-copyright information for specific makes and models of
receivers, transmitters, test equipment, etc..

The collection spans commercial, amateur, and military surplus gear of
all types. Unfortunately I have not yet taken the time to catalog all
this information (soon), but it is logically filed by make, model,
etc.

If you need service information for a specific piece of equipment,
(and I have the information in my collection) I will research and copy
it for you. Cost will vary depending on the time required to find the
information and the amount of pages to be copied. I estimate 10 pages
or less at $1.00 US/page including US postage. I will quote on larger
manuals. Note that I am not in the business of selling the manuals
themselves.

This is NOT my career or a business. Any requests must be prepaid or I
will ship COD at additional postage costs.

Other areas of expertise:

* ARES/RACES
* Novice/Tech Instruction
* RFI
* Volunteer Examiner Programs

Bruce Perens AB6YM

perens@hams.com

Maintainer of Linux for Hams CDROM

What Is Linux for Hams?

Linux for Hams is a full-featured Linux system with special additions for Amateur Radio. The system includes all of the sophisticated software that one would expect on one of today's engineering workstations, along with software for packet radio communication, electronic design, printed-circuit manufacture, a database of FCC rules and license exams, a code-practice program, and other Amateur Radio applications.

The general-purpose software includes software for connecting to the Internet, compilers for the C and C++ languages, a full-featured typesetting system, a symbolic mathematics program, CDROM authoring tools, and many other programs. Unlike other Amateur Radio software collections, Linux for Hams is an integrated system. The programs are already compiled and configured to work together with the rest of the system.

Linux for Hams is being built by Bruce Perens AB6YM, with the help of several volunteers. Of course, it builds on the work of the thousands of volunteers who helped create Linux and the other programs it contains.

The system will be available for free if you download it using FTP. A low-cost CD will be available, for about $30 US.

Free CDROM Subscription for Volunteers

Most of the software in Linux for Hams is free software, contributed by its author for anyone to use. I would like to compensate those authors for their work. If you are the author of a significant piece of software included in Linux for Hams, please E-mail to Perens@Rahul.net. You may be be able to get a free CDROM subscription

to Linux for Hams.

Bruce Perens AB6YM reserves the right to decide who gets free subscriptions, what is included in a free subscription, and for how long those subscriptions last.

For more information about Linux for Hams, check out the WWW page:

http://www.hams.com/perens/LinuxForHams

or send E-mail with the word "help" to:

info@hams.com

[Editor's Note: This project seems to be delayed as the result of schedule slippages with the Debian version of Linux. For more information about the status of the Debian Linux System, please contact David Engel at david@ods.com.]

atvq@aol.com

Amateur Television Quarterly (ATVQ) Magazine

The magazine's E-mail address and mine are the same: ATVQ. There is also a ham radio section for "manufacturers and dealers" on America On-Line in which we list Amateur Television Quarterly, as expert and manufacturer. That is where most of the Frequently-Asked Questions (FAQ's) come from.

Most FAQ's are answered in one of two books we published. ATV Secrets for Aspiring ATV'ers is a non technical book, and Volume II is a 300-page technical manual with theory and projects for all equipment necessary to operate an ATV station. Prices in US funds are $9.95 and $24.95 plus postage ($3.10). Most of your inquires can be answered by either of these two books.

I am also compiling a set of W6ORG Notes, a regular column in ATVQ, which answers many of the technical FAQ's on various equipment and operations. This will be available for $9.95 also.

I can try to answer questions on here, and frequently do, but time is expensive and limited!

MAB NY6Z (ny6z@sprynet.com) wrote:
: Sounds like you have a real problem in California. In other parts of the
: country disaster relief by Hams is still absolutely essential. I don't
: know what we would do without Skywarn reports and help during hurricane
: season. Anyone else with such experiences of needed Ham emergency relief?
: MAB

I can't speak directly about the Northridge quake(I was asleep
400 miles North of there..) I also suspect this guy didn't know
where to listen too.

During the Loma Prietta quake in '89 amateurs proved their worth
a number of ways. First, cellular wasn't functional in some areas,
and near major disaster points like the Cypress structure was impossible
to use due to cell-site overload. Second, there are some aspects
of amateur radio as a "broadcast" system, i.e. where everyone hears
everyone else, that were unique and beneficial in the first hours
of the quake.

To illustrate the second point, all of the major hospitals in the
South Bay area had no way of contacting other medical facilities.
Amateurs have long planned to staff the hospitals as part of our
initial response. The hospitals were trying to make phone
calls to adjacent facilities, and not getting thru because of the
instant phone system jam. When amateurs showed up within the first
half hour of the incident at all of the major facilities, they were
able to clear up what resources were available where within short
order because all facilities could hear each others' status.

See, that is the other part of the story that they didn't mention.
The phone system was operable...but how useful was it? Was it
instantly overloaded...probably.

Certainly, as time progresses, and more communications capability
gets out among the general populous as a day-to-day item, amateur
radio's role during disaster situations(" defined as when all
the normal stuff is overloaded or ain't working..) will have to
change and evolve. The other thing we bring to the party that
is often overlooked by the nay-sayers is the ability to improvise
on a technology problem. We're usually pretty good at that...
see any Field Day operation as an existance proof ;-)

We also come equipped with substantial RF resources in both equipment
and frequencies that help off-load the emergency channels. Maybe
everything we will do doesn't involve life-and-death...but as long

as we're useful!

Gentelman: You Hams to. Ask yourself is Ham Radio what you want it to be, or is it what it should be? My answer is no, and I'd think most other people will think Ham Radio isn't firing on all eight either. If you were a community emergency coordinator, would you rely totaly on Ham Radio, I don't think so. Maybe as a back up option or what ever it could be used for. Just listen to the local 2 meter repeater, know it alls, and tight ass'ed people. Sure Ham Radio will be used for emergency use, well call in all those closed and private repeaters, that are out there to keep the typical Ham Radio types out.

The 11 meter band or CB band, and espically the freeband is a place for none technical communications, granted they have more than they fair share of bozo's. But why is the CB and freeband so popular? Could it be a bunch of none technical guys just want to have a little fun communicating over radio's, without the dogmatic Morse Code and technical stuff. I'll bet if the freeband CB SSB crowd was not active, your Ham Radio Trancivers would cost a lot more.

You Ham Radio guys with your EME, CW, Packet, Know it all attitudes, and just unfriendly ways can have it all. God Bless the guys with the closed and private systems to keep their own out.

jherman@Hawaii.Edu (Jeffrey Herman) shared these priceless pearls of wisdom:

->Well that's incorrect. My 50's editions of The Handbook use mmF but make
->no mention of "condensers."

Three things:

1. I'm a '43 model, which means I didn't start this game until the late '50s, and have made my living in it ever since. When I started, they were called condensers in the TV shop, in the classroom, and in the ham shack.

2. If you are referring to the _ARRL_ "handbook", most of us consider it along with the Encyclopedia Britannica as two of mankind's greatest monuments to prejudice ever written.

3. I'd be a little slower to tell someone they are "just incorrect" without doing my homework properly. I'd also learn the judicious use of commas in the opening sentence.

Carl, you can do the same thing with SSB. Just pre-record what you want to say on a tape recorder, then play it back on the air at double the speed. The guy at the other end records at the high speed, then reproduces your voice at low speed. Just reverse the process to get his side of the conversation. As you develop tape recorders with higher and higher speeds, you can waste less and less HF spectrum. Good idea, there.

I can help people with HF stuff, cheap antennas, and am willing to
help troubleshoot problems with rigs.

I believe that one of the pillars of ham radio - construction/
understanding at the burn-your-hand-with-a-soldering-iron level - is
drifting out of ham radio. With Japanese radios which cost so much,
fewer and fewer hams are willing to risk their warranty to service
their own equipment. I would like to see a turn-around here...

Internet Services (Finding FAQ's, using Usenet, FTP, telnet, Archie, FTP mail-servers, mailing lists, etc., etc.)

Club Activities, Examinations, and other events in the Omaha/ Lincoln/Council Bluffs (Eastern Nebraska/Western Iowa) area.

Also willing to provide newsreader kill/select file help to anyone interested in customizing their presentation of the rec.radio.* newsgroups

I would be particularly interested in mentoring/training new FAQ/Info maintainers for the rec.radio.* newsgroups (see also Jack Hill and John Seney for FAQ maintenance opportunities and the rec.radio.amateur.* Working Group mailing list). To paraphrase Zack Lau, I can't post it all myself!

I have taken over maintenance of the Perl-based auto-faq FAQ management and posting package from Ian Kluft and would be happy to guide new FAQ authors in its use. The latest version, 3.2pl2, is available via anonymous FTP from:

ftp://ftp.novia.net/customers/pschleck/auto-faq/

The auto-faq-users mailing list has also been re-sited at Novia. To subscribe, send E-mail to auto-faq-users-request@novia.net

with:

subscribe auto-faq-users

in the message body. An acknowledgement message will follow shortly. To unsubscribe, replace the above command with:

unsubscribe auto-faq-users

Recently I undertook some academic research into packet radio using KA9Q's Multiple-Access/Collision Avoidance (MACA) link-layer protocol. I attempted a literature survey as well as some software simulations of the protocol (with varying degrees of success). I would welcome any opportunities to improve on my work, find out about any actual MACA implementations, share information, and build on my bibliography

(available on request). More information about MACA may be obtained
from:

For hams that are interested and live in my area, they are welcome to
login to IBBS. IBBS is a full-time Unix-based computer that is
dedicated to ham radio. I carry a full rec.radio.* news feed and
E-mail. There will never be a fee for anything.

Over the past 10 years I have operated from 160 M - 23 CM and would be
willing to answer any question a new person to the hobby has. If I

don't know the answer, well, NASA is only two blocks away. :-) I live and work here at Edwards Air Force Base, CA. I am also very active in SAREX.

Dave Stine WA2JTA/6

dstine@cisco.com

My areas of expertise are:

* vacuum tube amps, receivers, exciters
* CW operating tips
* wire antenna tips, hints & kinks

David Stockton GM4ZNX

dstock@hpsqf.sqf.hp.com

* SWL since 1960
* Licensed since 1984 (UK full class A)
* Degrees in electronics&comms and digital techniques etc.
* Currently senior design engineer doing RF design
* Fairly broad interest in amateur radio (but not contests!)
* Antennas, Transmission lines,filters from fundamental theory to practice
* Receiver structures and circuits from simple to state of the art.
* Transmitters, ATUs
* Test equipment
* Wide experience of troubleshooting/repairing equipment.
* Professional experience of EMC/RFI
* QRP
* UK Operation and Licensing
* My morse is flaky, but I keep working on it
* No interest in contests
* No interest in packet radio or in fixing computers

Just wrote the new oscillator and synthesiser chapter for the 1995 ARRL Handbook. Also co-developed (with G3ROO) a robust phase-locked summing loop circuit to replace the common mixer-filter LO frequency adder. A technical article describing the project was recently published in RADCOM.

ARRL Technical Information Service Coordinator (tis@arrl.org)

ARRL E-Mail Information Server SysOp (info@arrl.org)

The ARRL Technical Information Service (TIS) is a valuable membership
benefit that helps hams find answers to difficult technical questions.

The answer to a ham's most common technical questions can be found in
one of the many books about Amateur Radio. Folks who call or write to
ARRL TIS staff are often referred to one of these books or to a past
magazine article.

However, most hams find that the fastest way to get the answer is to do their own research. Publication catalogs often talk about what kinds of information are available in different books. A few good books will answer the vast majority of questions as well as enhance a ham's knowledge and enjoyment of this fascinating hobby.

Magazines are also a superb technical reference. An annual index of articles appears in the December issue of QST and other magazines. These indexes will usually have an article or two (or six) about a particular topic. If an older QST or QEX article is not available locally, the ARRL Technical Department Secretary can provide a copy for a small fee. Back issues are also available from the QST Circulation Department.

The ARRL Technical Information Service is a valuable source of information and research for questions that cannot be answered by other means. ARRL TIS has information packages and bibliographies that are available on request to answer most technical questions.

For those who want to know if something has been previously published on a particular subject, TIS can also assist with research to locate this information. TIS also helps locate companies that sell hard to find parts or supplies used in our hobby.

Many amateur radio informational documents are also available from the ARRL E-Mail Information Server (or Info-Server for short). To find out how to use the Info-Server, send E-mail to info@arrl.org with any subject (it is ignored) and the following text in the body of the message:

HELP

Dr. Len Traubman (DDS) W6HJK

ltraubman@igc.apc.org

http://www.igc.org/traubman/

Russian Phrases for Amateur Radio:

http://www.igc.org/traubman/russian.htm

This 20-page syllabus was compiled during the Cold War by W6HJK to help amateurs better communicate with their Soviet colleagues. A 90-minute audio cassette has been added to help with pronunciation. You need not be an expert in Russian, only interested in "trying."

The booklet provides (1) English words and phrases for QSOs, accompanied by (2) the Russian translation and (3) the English

transliteration, to assist you in pronouncing the Russian.

The syllabus follows the natural sequence of a QSO. There are additional sections on the Russian alphabet, phonetics, CW characters, numerals, and given women's and men's names. Suggestions are made for addressing mail to the former Soviet Union.

The author undertook this project out of a personal interest in improving the quality of his QSOs with Soviet hams and to enhance USA-USSR relations. A nominal cost of $6 US ($8 US international) for the booklet, and $6 US ($8 US international) for the audio cassette, are payable to the Foundation for Global Community (formerly Beyond War), the original original sponsor of this educational endeavor to build global dialogue and cooperation.

Requests should be sent to:

[Editor's Note: It is my intention to keep the Elmers List as comprehensive and useful as possible, representing a broad spectrum of amateur radio activities. To that end, I have tried to make only very minimal content judgements, if at all. Though this organization seems to serve larger political and propaganda goals that I personally may not agree with, I think the amateur-radio-related content, and the useful product being offered, is redeeming enough to include here. As always, criticisms regarding any Elmer's entry may be directed to the Elmer him/herself.]

(Spinal Tap)
- ---

Having recently discovered the joys of Perl and CGI on the WWW, I decided to get into the swing of it by coding a WWW page where one can take practice Amateur Radio Exams. The page is now complete and has all five examinations along with figures (including Extra).

The results are displayed question-by-question and then broken down by subelement so that you can see which areas need extra study.

I am also saving the results from each examination taken so that one can get some idea of the relative success rate for each Exam and subelement. This may provide some interesting information as time goes by.

The page can be found at:

http://www.biochem.mcw.edu/Postdocs/Simon/radio/exam.html

I _think_ it should all work as expected but I welcome any reports of bugs and/or suggestions!

I hope this is of use to people interested in upgrading.

PS: If the page is slow, or not to your liking, try Ham Exam at:

http://w5ac.tamu.edu/ham-exam.html

This message does not constitute any official or unofficial statement or
policy of American Turnkey or any other organization, corporation or
institution.

I just upgraded to Advanced, and am now working on Extra. Was first
licensed about ten months ago.

What I've learned:

1. How to operate HF from your apartment without being evicted
2. How to pass tests, both written and code
3. How to make a virtue out of the necessity of your limited
equipment, and enjoy the process while doing it

I operate CW HF exclusively. The only time I get to operate is when
the baby is asleep, so the XYL demands silent running. Besides, with
my wimpy wire, there is little point in trying to run voice.

Jim Walsh W7LVN

jwalsh@efn.org

Quarter Century Wireless Association, Inc. (QCWA), headquartered in Eugene, OR, is pleased to announce the QCWA World-Wide Web Home Page, available by either text or graphics browser at:

http://www.efn.org/~qcwa/

Membership in QCWA, a not-for-profit 501(c)(3) corporation, is open to any radio amateur licensed today AND also licensed 25 years or more ago (there is NO REQUIREMENT for continuous licensing over this time period -- if you received your first ham license on or before January 1, 1970, you're now eligible). Included on the Web page are:

* Photos, biographies, addresses and phone numbers of QCWA 1995-1996 Officers and Directors
* Database of local Chapters (nearly 200, worldwide), including name, address, and callsign of Chapter Secretary
* Listing of on-the-air Chapter meetings
* Details of upcoming National Convention -- with photos, as soon as we receive them
* A few words about the quarterly QCWA Journal (we hope soon to have excerpts from Editor Barry Wiseman's new, improved Journal available to you on the Web)
* Rules and schedule for QCWA Phone and CW QSO Parties
* QCWA Memorial Scholarship Program
* Criteria for and recent winners of QCWA Awards
* A Photo Tour of QCWA Headquarters and W2MM/7 memorial station (soon to display a spiffy new IC-738 . . . THANK YOU, ICOM!)
* Links to other interesting ham-related Web sites

Please visit QCWA on the Web . . . and take a moment to E-mail me with your comments, corrections, and suggestions at my E-mail address above. If you administer a ham-related Web site, QCWA would appreciate a Link from your page. We're 12,000-strong -- worldwide -- and growing! Come join us!

AMSAT-NA (the Radio Amateur Satellite Corporation in North America) operates the Internet host AMSAT.ORG to provide for efficient communications between people interested in the amateur satellite program. At this time two services are provided: a message remailing service and a mailing list service.

In addition, the AMSAT World-Wide Web home page provides interactive access to a variety of information related to the amateur radio satellite program. Use your Web browser program (e.g., Mosaic) to access the URL:

http://www.amsat.org/

Anonymous FTP is available from:

ftp://ftp.amsat.org/amsat/

This archive contains much of the same information as the WWW server. In addition, various files and programs are available for anonymous FTP. This is a relatively new archive, so the older FTP site:

ftp://ftp.ucsd.edu/hamradio/

still has lots of files not available there.

The message remailing service permits users to send each other mail on the Internet without keeping track of each other's Internet address. The remailing service allows each user to receive mail sent to the address callsign@amsat.org, where callsign is that user's amateur radio callsign, or other unique identifier. Mail sent to that address will be routed first to the AMSAT.ORG host at UCSD in San Diego, then remailed from AMSAT.ORG to the network address specified by the user. In most cases, this process delays the message by only a very few minutes. The mailing list service groups subscribers into mailing lists to receive certain types of messages. There are public mailing lists available to anyone, and private mailing lists available only to certain people (for example, AMSAT Board of Directors members or PACSAT command stations). Currently the following public mailing lists exist:

ANS - AMSAT News Service

This mailing list carries official news releases from the AMSAT News Service. These messages are posted in a form suitable for direct posting to a packet radio BBS system. Each message contains a Bulletin Identifier (BID), which permits the message to be introduced into the packet network at many places without resulting in duplicate bulletins at any BBS. The primary purpose of this mailing list is to distribute ANS bulletins for redistribution (via the packet net or on AMSAT voice nets), but individuals may also subscribe for their own use. If your local packet BBS doesn't seem to get the ANS bulletins reliably, you are encouraged to post the ANS bulletins yourself.

Only authorized AMSAT News Service personnel should send messages to the ANS mailing list.

AMSAT-BB - AMSAT bulletin board

This mailing list carries general AMSAT information. This information may NOT be suitable in content for transmission via amateur radio, so automatic reposting of AMSAT-BB messages to packet radio BBS's is discouraged. The purpose of this mailing list is to provide a forum for general discussion of any satellite-related topic.

Anyone may send messages to the AMSAT-BB mailing list. Simply address your message to amsat-bb@amsat.org, and it will be automatically forwarded to all subscribers to the AMSAT-BB mailing list.

Editors of publications should ask permission of the sender before publishing anything seen in AMSAT-BB elsewhere, unless the posting was obviously a public press release. However, posters should realize that anything posted to AMSAT-BB is essentially public.

KEPS - Keplerian Elements mailing list

This mailing list carries official postings of Keplerian element sets for satellites of interest to radio amateurs. Like the ANS bulletins, these messages are posted in a form suitable for direct posting to a packet radio BBS.

Only authorized AMSAT News Service personnel should send messages to the KEPS mailing list.

NASAINFO - NASA related information mailing list

This mailing list contains information about current and planned NASA space missions. Be forewarned: at times this mailing list delivers many large messages.

SAREX - Shuttle Amateur Radio Experiment mailing list

This mailing list contains information and press releases pertaining to SAREX missions.

To obtain any of these services, just send a message to the address

listserv@amsat.org

This address may be reached from CompuServe MAIL as:

>INTERNET:listserv@amsat.org

For the moment, the maintenance of the AMSAT.ORG mailing lists and remailing aliases is done manually. Later, this service will probably be automated and you will have to follow a strict message format. For now, you may send requests in free format. They will usually be processed within a few days. In general, you will not receive an explicit reply to your request. Be sure you specify:

1. Which mailing list(s) you want to receive
2. Your callsign, if any
3. The Internet address to be used, if different from the one in your From: header.

You should not send messages about your subscriptions to any of the mailing lists. Send them to listserv@amsat.org instead. This includes questions, requests for changes, requests for information about mailing services, and complaints.

The list of amateurs who may be reached via the message remailing service may be obtained by requesting the "address book". Note that the address book as distributed contains only the callsigns of the available addressees, not their actual Internet addresses. The address book is updated occasionally, and does not necessarily contain the very latest information.

You may request to be added to the list, to be deleted from the list, or to have your Internet address changed on the list. Please include your callsign if you have one. If you don't have a callsign, that's OK, but please say so. If you have more than one Internet address you want to have available on the AMSAT.ORG remailer, you may so specify. For instance, if you have a regular Internet address and a CompuServe account, you may appear in the address book as both w1xyz and w1xyz-cis. Mail sent to w1xyz would go to your Internet address, and mail sent to w1xyz-cis would go to CompuServe. MCImail accounts have the form w1xyz-mci, and so on.

You may also subscribe or unsubscribe to any of the public mailing lists described above. Send a message to listserv@amsat.org, specifying clearly which mailing list(s) you want to add or drop, and giving your callsign if you have one. When you subscribe to a mailing list, you will automatically be added to the remailing service as well, because the mailing lists are maintained by callsign. If you have more than one address listed in the remailing service, please indicate which one(s) you want the mailing list messages sent to.

Additional mailing lists, public or private, can be set up as needed. Send mail to listserv@amsat.org for details.

Questions about any service offered by AMSAT.ORG may be directed to listserv@amsat.org as well.

Please note that the AMSAT business office is separate from mailing list maintenance. You may address membership requests to martha@amsat.org, or send them by mail, phone, or fax to AMSAT headquarters:

Conway Yee N2JWQ

yee@mipg.upenn.edu
2144 East 21 Street
Brooklyn, New York 11229

Maintainer of the Universal and Free Listing of Repeaters for Radio Amateurs

This listing with all the data is available for anonymous FTP from:

ftp://mipgsun.mipg.upenn.edu/pub/yee/rptr010.Z

An experimental search and submission front-end is available at:

http://www.acs.ncsu.edu/scripts/HamRadio/repeaterdb.perl

As far as I am aware, all the data is freely redistributable and my
intent is to make sure it stays that way. For this reason, I have
applied the GNU General Public License.

The repeater project will now include repeaters from ALL bands and is
not limited to the US. This reflects the intent to make this directory
universal.

Contributions of data may be made by anonymous ftp to:

ftp://mipgsun.mipg.upenn.edu/pub/yee/uploads/

or via E-mail to yee@mipg.upenn.edu

The data format has not been changed from the old format so
contributions that you were planning to make (prior to my recent
troubles) are still current and most welcome. This repeater listing
will be of use if people take an active part in making it accurate and
useful.

Jim, Must have missed something in our out of context here.
Is this advice for a commercial design? And what is the app?
A Glideslope receiver only needs signal strength differences, right?

Why not a discrete front end, through the first mixer, then
go off-the-shelf?

All that intermod-shielding stuff might be important for voice comms
but marker beacons??

See why I am confused? The topic went all over the place.

As for posting an AA-5 schematic, I MUST assume there is another AA5
than the one that follows a 160 horsepower Lycoming around the skies.

151. Need Tape of *Arizona* Hour of Ham Radio & More

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-04 00:00:00 UTC
From: pschleck@oasis.novia.net
Message-ID: <55lfgk$rr@oasis.novia.net>
Source record: 213481

In July, I appeared on Len Winkler's excellent syndicated radio program to talk about amateur radio resources on the Internet. I have a tape of the national hour of the show (thanks Len!) and know about the RealAudio site (http://www.tapr.org/hrm/). What I am looking for is the local hour. It's not available on the RealAudio site. I asked Len, but he had a recent natural disaster (flooded basement), and the recording was apparently lost. I didn't record it myself as WWCR reception was weak, and I was much too focused on doing the show to also record it :-).

The national hour wasn't too bad, but we really got rolling on the local segment, and I'd like to save a copy for posterity. By necessity, the national hour needed to be more "entertaining," so we really didn't hit on a lot of really "meaty" issues regarding infotainment, evolution of technical knowledge, addictive personalities on the net, "Future Shock" in amateur radio, etc., until the second hour.

Any assistance in recovering a recording of the second half of my show would be appreciated. I'd be willing to pay any reasonable duplication and mailing costs.

Before relegating Arthur Varanelli to the realm of psycho ceramics, why don't you ask him who he his and why he has chosen to publicise this issue.

There is a lot of very good discussion here. The FCC's standards for exposure have many flaws, and though I don't care much for the style in which Art has chosen to fight this issue, he has some extremely valid points.

The most telling is that the FCC specifications are actually not based on hard science. It is based on "risk-risk" reduction; or in other words, reducing the risk of risk. This is not a valid standard for public policy. It takes non-thermal effects and treats them as if they are proven facts (few, if any, studies show conclusively that non-thermal effects of RF are dangerous).

Further the FCC expects that RF exposure suits and handheld readers are useful items. In reality they can't measure anything with accuracy that a true safety engineer can use.

This isn't just my opinion, these are the opinions of many who wrote to the FCC in the latest report and order of 93-62 (96-326). Yes, I have read it. So has Arthur Virannelli. I have to figure out how this poorly advised, sloppy, and scientifically unsound document can be legally adhered to in spirit and in practice. The devil is in the details, folks. This are Washington DC policy wonks at their very worst. If you don't believe me, read the Joint Seperate Statement by Chairs Chong and Quello. Read it carefully, and then ask yourselves why they'd say a thing like that...

KC8FAQ... What's your point? No one has said CB isn't
an abomination. The points added by myself and cracked@primenet.com
are that there is much more than just a CW test that separates
CB from ham radio.

Ironically too, CB today is much better than it was in the 80's.
I own an antique sports car and travel with other owners to
distant car shows, etc. and we use CB all the time. We just pick
an idle channel (and there's always several) and the CBs work fine
for inter automobile chat and keeping tabs on the cars in
our convoy of antiques. That probably says much about the
loss of mystique about getting on any type of radio
communications today... be it CB, amateur, GMRS
or whatever.

cRiTTa66> sucks... if you have any spaces and pics, please
cRiTTa66> mail!!!!!!!

cRiTTa66> 1) Manufacturer: DIAMOND Item : SRH-805 Description :
cRiTTa66> 2M/440/1.2 TRI-BAND HT ANT 1.75" Type Codes : Price :
cRiTTa66> $29.95

cRiTTa66> or the

cRiTTa66> SMA-501 2M/440/900 Mini w/SMA $29.95 Manufacturer: NCG
cRiTTa66> Item : SMA-501 Description : MINI HT ANT W/ SMA
cRiTTa66> CONNECTOR Type Codes : Price : $29.95

I own the short NCG/Comet SMA-501 stubby and use it on my FT-50 as my high attenuation Fox hunting antenna. I can hear the local repeaters but can not talk to them with the stubby. I consider it a receive-only antenna, and a poor receiver at that.

I also own the longer NCG/Comet SMA-3, which you did not mention. It is the best SMA duck I have thus far encountered. It far outperforms the Yaesu FT-50R's stock rubber duck, both on transmit and on receive. I highly recommend it.

The SMA-501 measures about 4 S-meter units lower than the SMA-3 on my FT-50R when listening to the same repeater. If an FT-50R's S-meter uses the standard 6 dB per S-unit (and I have no idea whether it does or not), then the SMA-501 is approximately 24 dB worse than the SMA-3 on receive in the VHF band. I have not compared the two on UHF.

While we are asking about antennas for my beloved little Yaesu FT-50R, I would love to learn of a SMA based extendible VHF 1/2 wave or dual band I could put onto my FT-50R to get better signal output. I have experimented with putting a standard BNC based extendible antenna on the end of the Yaesu SMA to BNC converter. Such a combination puts a frightening lever arm on to the little SMA connector. I fear I would tear the SMA free of the radio if I were to bump the converter plus BNC based antenna against something. So I am searching for a real SMA extendible 1/2 wave. Any pointers to manufacturers or web sites?

While we are on the subject of FT-50R antennas, has anyone tried the Antennas West idea of sticking a 19.25 inch piece of wire dangling

from the ground connection of the SMA connector to act as a ground
plane for the stick duck to work against? Did it help?

Answers have been available for many years... see more below.

>That is one of the things that most disturbs me about the current testing
>procedure. I think that providing the questions and answers turns what is
>supposed to be a "technical" test, based upon understanding technology,
>into a memorization drill.

The answers to the majority of questions have been available for
over 30+ years. Not necessarily as a fixed set of pool
questions, but through such testing aides as the AMECO
study guides and others. Those guides had actual FCC
test questions. The concept is anything but new. I have
suggested one way to improve the testings... to wit:

A few subtle changes in how questions appear in the question
pools can improve things quite a bit. Most easily addressed would
be questions that involve calculations and use of formulas.
I've stated before that such questions should be generic
and be able to have any variables appear on actual tests
(as opposed to only the specific examples that are in the pool
of questions now). In that way, no one could memorize
the answers and would be forced to calculate the
actual answer.

> Especially as the code requirement is de-emphasized, there is a need for
>an "honest" test of technical knowledge, especially for the higher class
>licenses.

Well, if passing the Advanced test is so easy, why are there still so
many generals? There's no code test for advanced if you
are already a general so one has to wonder why those generals
haven't upgraded if the theory is so easy already. Frankly,
while I'm sure some people with photographic memories do
advance through the use of rote memory alone, I really doubt
that it is a significant percentage and, for those that
can so advance, it simply is something the testing process

must accept. There really isn't any workable alternative.
Add to that the fact that probably 1/2 of the questions involve
memorization anyway (eg. rules and regulations, frequency bands, etc.)
and there's no way that some degree of straight memorization isn't
involved.

> However, providing the answers was a response to two problems, one real
>and one perceived.
> In the early 1980s, there was a publisher of ham exam training material

>people to tell them the questions they remembered from the test. So the
>FCC felt that, increasing the question pool and publishing them openly,
>they could circumvent Dick Bash. (And they did... where is Dick Bash now?)

While not done by Mr. Bash, that process went back to the 50's. Even
the General questions were available via mail because the Technician
test was the same theory as the General and could be administered by
mail.

> Also, with the advent of volunteer examineers they felt that chance of
>the question pool "leaking" out was substantially increased, so an open
>question pool keep things fair for everyone.
> Still, I think publishing the questions is a bad idea.

However, such standardized testing is common in government licensing,
so I don't expect any change. Reality dictates that
testing must result in a grading process that isn't subject to
interpretation or appeal.

Finally - the Delaware QSO PARTY!!

Sponsored by the First State Amateur Radio Club, Inc.

WHO: All radio amateurs in and out of Delaware

WHEN: First full weekend in February (1997: Feb 1 & 2)
Saturday: 1700Z (1200 EST) until 0500Z Sunday (2400 EST Saturday)
Sunday: 1300Z (0800 EST) until 0100Z (2000 EST Sunday)

WHERE: Suggested frequencies are:

Phone CW
1.860 1.825
3.960 3.550
7.260 7.050
14.260 14.050
21.360 21.050
28.360 28.050

Novice & technician frequencies: 25 kHz above the subband edge

HOW: Work stations once per band and mode.
Exchange signal report and QTH (county for DE stations;
state/province/DXCC country for others).

SCORING: There is ONE CLASS for all stations.
Count 1 POINT per PHONE QSO.
Count 2 POINT per CW/RTTY/digital QSO.
Multipliers: NONE

AWARDS: Certificates will be awarded in the following categories:

Within Delaware: First, second and third highest score
Within each Delaware county: Highest score
Others: First, second and third highest scores

In addition, prizes will be furnished by Ham Radio Outlet
of Delaware.

Further prizes and certificates will be awarded, depending
upon participation.

Mail entries within 30 days to: Contest Chairman
FSARC, Inc
PO Box 1050
Newark, DE 19715

Include SASE for results.

E-mail inquiries to radio@udel.edu.

Thank you and LET"S GO DELAWARE!!

Dear Micky:

I bought a demo one of those, got it home, and found it had no xmit audio. I was on the phone with Alinco for AN HOUR--on my tab; still couldn't get it to work. Took it back. It was a ham store's packet demo. Gee; I wonder why they were selling it. They graciously took it back, though, and I exchanged it for something else. Seem that when Alincos go, they really go.

William,

Is the real reason you don't want to go to a Kenwood Dealer the fact that you are not a licensed Amateur Radio Operator, and are looking to operate that Radio? You see William, we have an online listing of who is, and who isn't a licensed amateur. And you made the who isn't list. Nice try.

Jim

By the way, nothing is really (urgent) here.

>controversy still rages! My neanderthal question is this: Is there
>still a Straight Key Night? I'm mostly code, when I do get on. And
>strictly straight key. Bet that will raise some hackles!!
>
>By the way, why all the animosity out there?
>
I think SKN still exists, but I don't remember. Either it or the novice
roundup had it's last go last winter (I think). If I get everything up
and working on HF before the next one, I may get on SKN this year (if
it's still around). New Year's Eve if I remenber correctly.

Regarding the animosity, it's probably like "dress codes." I've never
seen anything raise as much controversy in schools or in business as much
as a dress code.

Jeff whoever you are at UH, you are unequivacably wrong. The mod I posted here on how to modify an IC751 rig for out of band operation assumed that your using an external device such as an Antenna tuner, or line tuner to suck the RF out of your rig where it will do no harm to your equipment when your way off your normal Ant fqcy range. I thot any fool would comprehend that. I use fqcys 4448khz and 3353khz with no heating at all and no danger to my rig. Are you trying to scare people because "haloween" just passed????

Excuse me, 'wide open space' on 222 MHz? Then why did the last 220 SMA meeting feature a hearing due to a denial of freq. coordination to a repeater on Blue Ridge, and why were there 2 freq. coordinators on 222 MHz in So. Cal. for a while? The 222 MHz band may not be used as much as 2 meters, but it's stuffed full of repeaters. There is some room on 6m, but it's awfully noisy.

I'm not sure we can blame Mike for the mess on 446.65. He is only a pawn of SCRRBA, which apparently decided that the frequency shall not have an 'open' repeater on it. The 'warning' transmitter cites references to SCRRBA coordination, but makes no mention of possible coordination of KJ6TQ by other freq. coordination entities, so it is not accurate to say that any other repeater on the freq. is uncoordinated.

Hello all and thanks for reading this. I was just wondering if
anyone has any mods for the Standard C5900DA tri-band radio?
If so, I would be interested in hearing about them. Thanks and 73
to all, Darryl KE6IHA

> LA6UT / Stein

That IC-720A radio has a ICOM specific parallel interface for setting
frequencies. In order to control the radio a parallel to RS-232 or CI-V
serial converter would have to be designed. In addition, the radio has no
squelch circuit so it wouldn't know when to stop scanning. The squelch
indication would need to be added and brought out to the rear connector.

I've got an IC-720A, so let me know if you design this interface. It's more
trouble than it's worth in my opinion when it comes "free" with the newer
vintage radios.

Message received here... you might want to delete a lot of the "quoted"
information next time. Unless it is needed to clarify your comments,
including a lot of "quoted" info (lines from previous messages) just makes
your message harder to read and slows things down for a lot of the
potential readers.

>studying for Novice - don't mind learning Code - might even find it
>relaxing who knows. From what I've observed there seems to be a lot of
>controversy about code and overcrowding. Two thoughts come to mind -
>supposedly, within a couple of years, the Internet will be overcrowded

I doubt that Internet will be overcrowded, although to the old-timers, it
became overcrowded as soon as it became open to those outside the academic
and research arena. :-)

>- maybe radio won't need to be concerned; perhaps elimination of the
>answers to the tests may prove to be a better way to weed out those who
>aren't serious. Whose bright idea was it to provide test answers - the
>government's?

That is one of the things that most disturbs me about the current testing
procedure. I think that providing the questions and answers turns what is
supposed to be a "technical" test, based upon understanding technology,
into a memorization drill.
Especially as the code requirement is de-emphasized, there is a need for
an "honest" test of technical knowledge, especially for the higher class
licenses.

However, providing the answers was a response to two problems, one real
and one perceived.
In the early 1980s, there was a publisher of ham exam training material
named Dick Bash. Reportedly, Bash would have his people outside ham exams
(except for Novice tests, they were all conducted by the FCC) and pay
people to tell them the questions they remembered from the test. So the
FCC felt that, increasing the question pool and publishing them openly,
they could circumvent Dick Bash. (And they did... where is Dick Bash now?)

Also, with the advent of volunteer examineers they felt that chance of
the question pool "leaking" out was substantially increased, so an open
question pool keep things fair for everyone.
Still, I think publishing the questions is a bad idea.

I thought I heard that this technology has already been compromised, by the same group that used it to receive one manufacturer's trunked transmissions.

I don't know if controlling a repeater in such a way is good. The signal-to-noise
ratio of this technology makes it less than foolproof, and I for one sure would not want
to accues some innocent party of jamming or whatever based on such imperfect information.

Why not just petition the FCC to require ESNs on ham equipment, just like cellular?
No valid ESN, no repeater access. And make it a crime to tamper with the ESN.

Just kidding.

...Peter

>which of them are the most heavily used.

While you're programming, don't forget Southern California's Emergency
and Calling Repeater - W6FNO.

146.820 - no pl Johnstone Peak (San Dimas) and Onyx Peak.

Not a direct line to authorities, but has been monitored for two decades
by experienced Amateurs for highway emergencies.

-Open repeater - for short contacts and emergencies only.
-30 second timer - you must listen for the tone to reset.
-Suggested maximum QSO time for non-emergencies = 2 minutes.
-All are welcome to the Tuesday night Nets at 7:00pm.

Bill, we agree. But someone is spreading the myth that the new
requirements are based on something *other* than cell/tissue heating.

They most definately are not.

The MPE's (and for some Services, the actual SAR test itself), is
based only on the effects of cell/tissue heating.

Think of it this way. SAR = "specific absorption rate". SAR tests are
a direct measurement of the heat energy being applied to a mass of
actual tissue.

The whole standard is based on SAR and the base limits are expressed
in terms of "SAR". MPE measurements, where permitted, (usually the
case for hams unless the rules for HT's are ever tightened up),
provide, maximum permissible exposure of E fields, H fields, and/or
power densities, which should result in acceptable "SAR's" upon tissue
mass subjected to less-than the values given in the tables.

The absorption rate is expressed in "watts per kilogram". As you know, "watts" is a "rate" ("joules per second"). The limits are based on the THERMAL effects when a sample of tissue of so many kilograms mass is subjected to RF, which causes the mass to absorb "X" amount of joules (heat energy) per second.

Hams should be aware of what these requirements are based on. This is *not* the pseudo science of "athermal" (other than thermal) effects that you are refering to in your post.

The limits are not too conservative either, but, they do provide a reasonable safety margin in the opinion of the experts on the IEEE commitee, which is heavily represented by *industry* (not just universities and government).

So, we agree that fake science should not be used. But we should not trivialize this one because of some myth that it is pseudo science. It is in fact based on the thermal cell/tissue heating that everyone (so far) agrees is valid.

On the other hand, the original poster with the web site goes too far off the deep end, on the other extreme, saying that the ruling is not strict enough. He is wrong. There is a very large safety margin built in.

Amateur Radio: Elmers List Subject Quick-Search Index

(Note: This index is not necessarily all-inclusive and some Elmers are listed more than once.)

10-X INTERNATIONAL

* Cebik (Mailing List and WWW Page)

AMATEUR RADIO EMERGENCY SERVICE (ARES)/RADIO AMATEUR CIVIL EMERGENCY SERVICE (RACES)/SKYWARN

* Adams, I (ARES and SKYWARN)
* Ammar
* Ayers (RACES and SKYWARN)
* Boccardi (ARES/RACES/SKYWARN)
* Boudda (Morocco)
* Butler
* Chilton (EMA Radio Officer)
* Choate
* Glago (Sonoma Valley, CA ARES and RACES Director)
* Gray (Arkansas Section)
* Humphries (ex-Asst. EC)
* Ihry (ARES/RACES/SKYWARN)
* Johansen (ARES)
* Knauer (ARES and SKYWARN, including National SKYWARN WWW Page)
* Kruml (Northeast King County, WA ARES EC, EComm Pacific Northwest ARES Internet Mailing List)
* Lao (Philippines)
* Miller (Ventura County, CA ARES Area 6 Packet Radio Training Group and WWW Page)
* Mills (SKYWARN)
* Moell, A (Hospital Disaster Support Communications System and WWW Page)
* Morgan (ARES and SKYWARN)
* Morris (ARES)
* Neeson

* Neff
* Paperman
* Richardson (ARES/RACES)
* Schwartz (NYC EC for Operations)
* Shelton, P
* Smith (ARES and SKYWARN)
* Sohl, R (ARES/RACES)
* Stader (EMAS SEC)

AMATEUR SATELLITE CORPORATION (AMSAT)

* Bauer, F (VP for Manned Space Activites, Chief Member of SAREX Working Group, NASA/SAREX WWW Page)
* Boudda (Morocco)
* Galazka
* Johnson, C
* Lee (Korea)
* Marchant
* Roth (Portland, OR Area Coordinator)
* Sohl, R
* Williamson, P (WWW Page, Anonymous FTP Archive, and Mailing Lists)

AMATEUR TELEPRINTER OVER RADIO (AMTOR)/PACKET TELEPRINTER OVER RADIO (PACTOR)/RADIO TELETYPE (RTTY)

* Bernstein
* Butler
* Leavey (73 Magazine RTTY Loop Column and WWW Page)
* Neeson
* Reynolds (FSK, PSK, MSK, Various Types of ARQ and FEC Systems)
* Sayer (also decoding CHU's ASCII time code)
* Sohl, R (AMTOR)
* Sussman (Publisher of PACTOR News WWW Page, Speaker and Host of PACTOR Forum at Dayton Hamvention)

AMERICA ON-LINE

* Ruh (ATV Quarterly Representative, Ham Radio Manufacturers and Dealers Section)
* Stader (Host and Manager, Ham Radio Club Forum)

AMERICAN RADIO RELAY LEAGUE (ARRL)

* Bauer, J (W1AW Manager and Chief Operator, ARRL Bulletin Mailing List)
* Bloom (QEX Editor, ARRL CNC Contact)
* Cebik (Educational Advisor)
* Cira (Los Angeles, CA ACC)
* Ehrlich (EMAS Internetworking ASM)
* Elmore (CO TC)
* Goldstein (Volunteer Counsel - Florida Only)
* Halle (Phoenix, AZ Area Official Observer Coordinator)
* Hare (Laboratory Manager)

* Hill (TN TS)
* Jahnke (VEC Manager)
* Kruml (Northeast King County, WA EC)
* Lau (Technical Consultant)
* Newkirk (Webmaster, HQ WWW Page)
* Redding, T (Educational Advisor)
* Sefranek (EMAS TA)
* Sohl, B (NJ Local Govt. Liason)
* Sohl, R (TX TS)
* Stader (EMAS ASM and DEC)
* Tracy (InfoServer Sysop, TIS Coordinator)
* Turner (Volunteer Counsel)

AMIGA PERSONAL COMPUTER

* Leadmon (Amiga NOS FTP Archive)
* Morris
* Salnick
* Whatton (Manager, Amiga Amateur Radio User Group and WWW Page)

ANTENNAS

* Anthony
* Ayers
* Brewer (wire HF)
* Brooks (HF to Microwave)
* Brubaker (HF)
* Butler
* Cebik
* Chahine
* Cieslak, C
* Coyle (multi-band wire HF)
* DePolo (Design/Theory)
* Elmore
* Galazka
* Graham (wire HF for apartments)
* Gray
* Halbert (simple designs)
* Hall, M
* Hill (Mobile, including HF)
* Humphries (VHF and multi-band wire arrays)
* Ihry
* Morris
* Mouw
* Muenzler
* Myers (and transmission lines)
* Naumann
* Neeson
* Orcutt
* Preston
* Redding, J (including VHF/UHF)

* Reynolds (including HF)
* Rymell
* Salnick
* Salyzyn
* Sarrio
* Sefranek (and Transmission Lines)
* Shelton, J
* Shelton, P
* Silva
* Smith (including Homebrew)
* Sohl, R
* Standerfer
* Stine (wire HF)
* Stockton
* Taylor
* Thomson (wire HF)
* van de Kerk (HF Low-Profile)
* Zurn (wire HF)

ANTIQUE AND OLDER EQUIPMENT

* Anthony
* Avery (including AWA)
* Ayers
* Bellville
* Brewer (40's-70's and WWW Page)
* Butler
* Dean
* Drechsel (Collins Radio Virtual Museum WWW Page)
* Eisenberg
* Hill (Mailing List)
* Keys (including HF and CW)
* McEwen (Telegraph Key Collectors and Historians WWW Page)
* Morris
* Muncey (Terry Muncey dba Radio Era Schematics and Documentation Archives)
* Orcutt
* Paperman (Manuals, Service Information, and Literature)
* Richardson
* Sohl, R
* Standerfer
* Turner (including Kenwood and Ten-Tec)

ANTIQUE WIRELESS ASSOCIATION (AWA)

* Avery

APPLE MACINTOSH COMPUTER

* Avery
* Been
* Bellville

* Boccardi
* Buydens
* Greatorex (including Amateur Radio Software FTP Archive)
* Marchant
* Mills
* Morris
* Seney (Macnet, including Anonymous FTP Archive and WWW Page, List of Amateur Radio Software WWW Page)
* Sohl, B

BATTERIES

* Ammar
* Ayers
* Browne
* Cieslak, C
* Eisenberg
* Hammill (Sealed Lead-Acid)
* Ihry
* Morris
* Muenzler
* Myers
* Preston
* Redding, J
* Sefranek (including Solar Operation)
* Sohl, B
* Sohl, R

BRITISH AMATEUR TELEVISION CLUB (BATC)

* Pawson (WWW Page)

BULLETIN-BOARD SYSTEMS (BBS'S)

* Bertolino (Trance - Italy)
* Butler
* Cira (HAM*INFO*LINK*SOURCE*BBS)
* Gathergood (CQ Centre - United Kingdom)
* Johnson, C
* Meredith (F6FBB Packet BBS Support)
* Reeves
* Stillinger (IBBS)
* Watters

CALLSIGN DATA/NATIONAL TECHNICAL INFORMATION SERVICE (NTIS)

* Carruth
* Lloyd (QRZ! Ham Radio CDROM and Callsign/E-mail Registry)

CIVIL AIR PATROL (CAP)

* Moore
* Sohl, R (Ground/Air Search and Rescue)

* Standerfer

COLLEGE CLUBS

* Bernstein (President, Georgia Tech ARC)
* DePolo (Technical Director, Univ. of Pennsylvania ARC)
* Edwards (Univ. of Maryland ARA)
* French, et al (Ham-Univ Mailing List)
* Killebrew (Trustee, University of Houston Amateur Radio Club)
* Luszcz (WWW Page)
* Madsen, et al (Iowa State Elmers)
* Mills (Auburn University)
* Schleck

COMMERCIAL EQUIPMENT

* Bellville
* Cieslak, C
* DePolo
* Dodell (Mailing List)
* Eisenberg
* Garcia
* Gray
* Ihry
* Sohl, R
* Veres (Commercial Radio through 12 GHz, UHF and 2.5 GHz ITFS TV)
* Wier (ICOM Mailing List)

CW (MORSE CODE)

* Avery
* Been
* Bono (AutoCW)
* Butler
* Caserta
* Chahine
* Cieslak, C
* Elmers
* Elmore
* Galazka
* Hill (learning hints)
* Ihry
* Johnson, C
* Keys (including CWIST HF CW Net)
* McEwen (Telegraph Key Collectors and Historians WWW Page)
* Morris
* Muenzler
* Naumann
* Neeson
* Preston
* Salyzyn
* Sarrio

* Shelton, P
* Silva
* Stine
* Stockton
* van de Kerk
* Watters
* Zurn (including European abbreviations)

DIGITAL SIGNAL PROCESSING (DSP)

* Ayers
* Bloom
* Bruhns
* Butler
* Chahine
* Edwards
* Gilliver
* Goerg (Webb Laboratories RF/Microwave CAE WWW Page)
* Hall, D (including WWW Page)
* Ihry
* Lee
* van Vliet (Filters, including Integrated, Distributed, Lumped, and Active)

DIRECTION FINDING (DF)

* Douglas (including Doppler and DF Systems WWW Page)
* Moell, J (Homing In Column WWW Page)
* Orcutt

DUTCH NATIONAL RADIO SOCIETY (VERON)

* Bruinsma (National Public Relations Committee, National WWW Page, Woerden Chapter Board Member, and Woerden Chapter WWW Page)

EARTH-MOON-EARTH (EME) COMMUNICATIONS

* Bernstein
* Cook (including WWW Page)
* Galazka
* Lee (Korea)
* Smit (WWW Page)

EQUIPMENT TESTING/TROUBLESHOOTING

* Ayers (Tube and Solid-State)
* Boccardi (Electrical Safety and Grounding)
* Brewer (Tube Gear)
* Bridges (Tech Bench Elmers Amateur Radio Society WWW Page)
* Bruhns (Low-Level/Low-Frequency Analog and Transmission Line Measurements)
* Butler
* Coyle (Kenwood TS-830S and TS-940/AT Service)

* DePolo
* Drechsel (Collins Radio Virtual Museum WWW Page)
* Dworkin
* Eisenberg
* Elmore (Troubleshooting)
* Galazka
* Goldman (Tech Bench Elmers Amateur Radio Society)
* Hare (ARRL Laboratory Manager)
* Ihry (General Electronics)
* Kile (Kenwood WWW Page and Anonymous FTP Archive, including Service Bulletins and Technical Notes)
* Lord (including Radio Doctor's WWW Page)
* Morris
* Muncey (Terry Muncey dba Radio Era Schematics and Documentation Archives)
* Myers
* Ornitz (Instrumentation)
* Paperman (Manuals, Service Information, and Literature)
* Preston (Electronic Surveillance)
* Rooke (Embedded Systems Engineer)
* Rymell (Electronics and Computer Service Work)
* Salnick
* Salyzyn
* Sefranek (including Power Supplies and Amplifiers)
* Seney (Digital Storage Scope FAQ)
* Sohl, R
* Standerfer (Test Equipment and Measurements)
* Stockton
* Taylor
* Veres (Commercial Radio through 12 GHz, UHF and 2.5 GHz ITFS TV)
* Wendt (Founder, Tech Bench Elmers Amateur Radio Society)
* Witte (Instrumentation, Test Equipment, and Measurements)

FINNISH AMATEUR RADIO LEAGUE (SRAL)

* Toijala (HQ Contact and WWW Page)

FREQUENTLY ASKED QUESTIONS (FAQ's)

* Adams, C (QRP Rig Standardized Info Sheets)
* Bowen (Supplemental FTP Archives, Internet Callbook Server)
* Cebik (QRP Periodicals, Electronics Books, and Antenna Books Lists)
* Cheeseman (Australia)
* Dawson (Linux HAM and AX.25 HOWTO's)
* Dodell (rec.radio.info Newsgroup)
* Goldstein (Packet Radio WWW Server, including Packet FAQ)
* Hill (Antennas)
* Jahnke (VE Exams Scheduled)
* Lloyd (QRZ! Callsign/E-mail Registry)
* Moell, J (Radio Direction Finding)

* Ruh (Amateur Television)
* Salyzyn (Hams on Usenet)
* Seney (General Amateur Radio, Digital Storage Scopes, and Macintosh Amateur Radio Software List WWW Pages)
* Turvey (United Kingdom)
* Twigger (Amateur Radio Exam Practice WWW Page)
* Williams (Amateur Radio WWW Server)
* Woods (Mail-Order Electronics)
* Yee (Online Repeater Directory)

GEORGIA RADIO AMATEUR PACKET ENTHUSIASTS SOCIETY (GRAPES)

* Bernstein
* Coffman (E-mail Contact)

HANDICAPPED OPERATING

* Gilliver (Blind Issues)
* Madsen, et al
* Tice (Manager, Courage HANDI-HAM System)

HIGH FREQUENCY (HF)/CONTESTING/DX

* Ayers
* Bernstein
* Bertolino (425 DX News and IOTA WWW Page)
* Boudda (Morocco)
* Brooks
* Brubaker
* Butler
* Caserta
* Chilton
* Cieslak, C
* Coyle (including Station Setup for New Hams)
* DePolo
* Dworkin
* Elmore (DX'ing, Contesting, and Propagation)
* Galazka
* Gilbert
* Gray
* Hall, M
* Hill (Mobile)
* Ihry
* Job (Maritime Mobile Service Net)
* Johnson, C
* Kumagai (CQWW Committee Member, JIDX Committee Chairman, Japanese DX Contest Mailserver and Mailing List)
* Madsen, et al
* Martz (Bay Area, California, DX'ers WWW Page)
* Mills
* Muenzler
* Naumann

* Neader (Contesters and DX'ers WWW Page)
* Neff
* Nerenberg (DX Mailing List and WWW Page)
* Orcutt (SWL'ing, including Clandestines)
* Preston
* Salnick
* Sarrio (CW)
* Silva
* Simpson (Best of 75 Net)
* Sohl, R
* Stiegler (Manager, Maritime Mobile Service Net)
* Thomson (Mostly CW)
* Tidd (DXCC Databases)
* Traubman (Russian Phrases for Amateur Radio)
* van de Kerk (CW, Low Profile)
* Veres
* Witkowski (DX QSL Info WWW Page)
* Zurn

HOMEBREWING/DO-IT-YOURSELF

* Andrews, M
* Ayers (Tube and Solid-State)
* Bernstein
* Bridges (Tech Bench Elmers Amateur Radio Society WWW Page)
* Bruhns (including Low-Level/Low-Frequency Analog, DSP, Surface Mounting, and Transmission Lines)
* Butler
* Carruth (Digital Design, Software)
* Chilton
* Cieslak, C
* Dean
* DePolo
* Edwards (including DSP)
* Eisenberg
* Elmore (Construction Practices)
* Galazka
* Gilliver (DSP, Blind Issues)
* Goldman (Tech Bench Elmers Amateur Radio Society)
* Gray
* Gunton (Microwave Components/Techlock Distributing WWW Page)
* Halbert (QRP)
* Hall, D (including DSP WWW Page)
* Hill ("Glowbugs" Tube Homebrewing Mailing List)
* Hosking (Perth, Australia Radio Experimenters Group and WWW Page)
* Ihry (General Electronics, Computers, and Computer Programming)
* Johnson, R
* Keys (Junk Box Projects, National Electrical Code for Hams)
* Kohnen (Tubes)
* Lau (Transverters, VHF/UHF, Filters, Repeatable Projects)
* Muenzler

* Myers (Transmission Lines, Analog and Digital Design)
* Naumann
* Neeson
* Ornitz (Chemical and Toxic Material Use and Handling)
* Rooke (Embedded Systems Engineer)
* Rymell (Electronics and Computers, Low-Cost Projects)
* Salyzyn
* Sayer (Class-C Bipolar Amplifiers and Phased-Lock-Loop Circuits)
* Sefranek (Amplifiers, Battery/Solar Operation, Power Supplies, and Repeaters)
* Silva (Analog, Digital, Tubes, Semiconductors, RF, Finding Parts)
* Sohl, R
* Stine (Tube Amplifiers, Receivers, and Exciters)
* Stockton (including QRP)
* Taylor (Tubes and Amplifiers)
* van Vliet (including Power Amplifiers, Low-Noise Amplifiers, and Mixers for Microwave)
* Wendt (Founder, Tech Bench Elmers Amateur Radio Society)
* Woods (Mail-Order Electronics)

IBM PERSONAL COMPUTER (PC) AND CLONES

* Ammar
* Andrews, M
* Angus
* Ayers
* Bellville
* Bernstein
* Bono (AutoExam, et al)
* Budd
* Butler
* Buydens
* Caserta
* Cieslak, C
* Cole
* Crick (Windows, Ham University)

MAILING LISTS

* Ackermann (TAPR Net-SIG BBS)
* Adams, C (QRP-L)
* Ardai (Many, see full entry)
* Bauer, J (ARRL Bulletins)
* Caserta (425 DX News Mailing List)
* Cebik (10-X International)
* Colwell (Advanced Computer Controls and Link Communications Repeater Controllers)
* deVolpi (AmSoft and World of Ham Radio Product Announcements)
* Dodell (Land-Mobile Radio, MARS Members)
* French, et al (Ham-Univ College and University Clubs)
* Garcia (Florida APRS)
* Hill (Antique and Older Tube Equipment, rec.radio.amateur.* Working Group, "Glowbugs" Tube Homebrewing)
* Kruml (EComm Pacific Northwest ARES)
* Leadmon (MD/DC Activities)
* Madsen, et al (Iowa State Elmers)
* Meredith (F6FBB Packet BBS)
* Nerenberg (DX)
* Wier (Motorola HC11/HC16 and ICOM)
* Williamson, P (Many, AMSAT-related)

MEDIA (PUBLICATION/WRITING/BROADCASTING)

* Affens (CQ Magazine)
* Bertolino (SWL Page of Radio Rivista, Italy)
* Bloom (QEX)
* Budd (Audio Engineer, Multi-Media, TV Technical Director/Program Director/Producer, Radio Production Engineer)
* Buelow (TAPR BBSSIG User Education Working Group)
* Cebik (Technical Writing, FAQ's)
* Coletti, et al (Newsline)
* DeWolf (Media Relations for Clubs, Syndicated Columnist on Internet Matters)
* Lau (QST/QEX)
* Leavey (73 Magazine RTTY Loop Column)
* Leynes (Editor-in-Chief, Youthnet News)
* Lloyd (QRZ! Ham Radio CDROM)
* Moell, J (Homing In Column and WWW Page)
* Moore (Co-Host, Ham Radio and More)
* Moseson (CQ Magazine Online Coordinator)
* Perens (Linux for Hams CDROM)
* Ruh (ATV Quarterly)
* Schleck (FAQ's and auto-faq)
* Seney (Macnet)
* Sussman (PACTOR News)
* Witte (Ham Magazines, Electrical Engineering Publications, and a few books)

MEDIUM FREQUENCY (MF, 160 METERS)

* Ayers
* Bernstein
* Butler
* Gray
* Sohl, R
* Stillinger
* Thomson (LF/MF Radiobeacon DX'ing)
* Zurn

MICROWAVE

* Bernstein
* Brooks
* Garcia (above 10 GHz)
* Goerg (Webb Laboratories RF/Microwave CAE WWW Page)
* Gunton (Microwave Components/Techlock Distributing WWW Page)
* Hammill
* Lau (Transverters up to 24 Ghz)
* Lee
* Reynolds (SHF)
* Sohl, R
* Stillinger
* van Vliet (including Power Amplifiers, Low-Noise Amplifiers, and Mixers)

* Veres (Commercial Radio through 12 GHz, 2.5 GHz ITFS TV)

MILITARY AFFILIATE RADIO SYSTEM (MARS)

* Alexander (Navy)
* Ayers
* Browne (Navy)
* Cartier (Army, CT Director for Emergency Operations)
* Dodell (Air Force, Mailing List)
* Gutstadt (Navy/Marine Corps.)
* Ingerson (Navy/Marine Corps., ME Area of Region ONE)
* Smith (Air Force)
* Sohl, R
* Taylor (Air Force)

MOBILE/PORTABLE/FIELD DAY

* Adams, I (Mobile and Portable)
* Ammar (Portable and Field Day)
* Andrews, M (Portable)
* Ayers (Mobile and Portable)
* Bernstein (Field Day)
* Boccardi (Field Day)
* Brooks (Mobile)
* Butler (Field Day)
* Carruth (FM and HT's)
* Caserta (Portable)
* Chahine
* Cieslak, B (Field Day, Category 2A)
* Cieslak, C
* Dean
* Eisenberg (Mobile)
* Estes (Bicycle HF)
* Gray
* Hare (RFI issues)
* Hill (including MF, HF)
* Humphries
* Ihry
* Job (Maritime Mobile Service Net)
* Keller (HF)
* Morris (Portable)
* Redding, J (Portable)
* Salyzyn (HF CW)
* Shelton, J (Field Day)
* Smith (Mobile and Portable)
* Sohl, R (Mobile/Portable/Field Day)
* Stiegler (Manager, Maritime Mobile Service Net)

NATIONAL TRAFFIC SYSTEM (NTS)

* Boccardi
* Butler

* Elmore
* Goldstein (NCS FL Net, Packet)
* Neeson (Eastern Canada, Digital Modes)
* Salyzyn (Canada)
* Zurn (Europe)

NEW ZEALAND ASSOCIATION OF RADIO TRANSMITTERS (NZART)

* Andrews, D (Frequency Management and Technical Advisory Group Chair)
* Davis (WWW Page)

NORTH AMERICAN CENTER FOR EMERGENCY COMMUNICATIONS (NACEC)

* Addy (Executive Director and WWW Page)

NOVICE/TECH INSTRUCTION

* Adams, I
* Anthony
* Ayers
* Been
* Bellville (K-12 Educator and Consultant)
* Bono (AutoExam/AutoCW)
* Budd
* Chilton
* Choate (AC/DC Theory, "Big Picture")
* Cieslak, C
* Dean (York - Ontario, Canada - Region Amateur Radio Club Instructor)
* Deutschmann
* DeWolf (Ottowa Valley, Canada Instructor)
* Dworkin
* Galazka
* Glago (Public Service for Beginning Amateurs)
* Gray
* Hill (CW Learning Hints)
* Ihry
* Larson
* Madsen, et al
* Maia (W5YI Group Education Division)
* Mills
* Morris
* Muenzler
* Myers (including Basic Electronics and Communications Theory)
* Neff
* Paperman
* Redding, J
* Redding, T
* Reeves
* Smith
* Sohl, R

* Stader
* Twigger (Amateur Radio Exam Practice WWW Page)

PACKET AND DIGITAL NETWORKING

* Ackermann (including TCP/IP, TAPR, Net-SIG, and Kantronics D4-10 19.2kBaud Radio Modems, Joint IP Coordinator for Ohio Subnet)
* Andrews, M
* Angus (TCP/IP, NOS, UUPC, Tnet, and SNEWS, SCO Xenix, Windows 95, IP Coordinator for CA - LA County Subnet)
* Bellville (including Rose)
* Bloom (ARRL CNC Contact)
* Boccardi (including APRS)
* Buelow (TAPR BBSSIG User Education Working Group)
* Butler
* Caserta
* Cieslak, C
* Coffman (GRAPES 56 kBaud Radio Modems)
* Cole (TCP/IP and NOS)
* Coyle
* Dawson (Linux HAM and AX.25 HOWTO's, IP Coordinator for Sydney, Australia, Internet Gateways)
* Dean

Amateur Radio: Elmers List Info and Administrivia

This administrivia file and the companion Amateur Radio Elmers Resource Directory are intended for non-commercial distribution via the Internet. Any other uses, please E-mail for permission.

[Special Note: Greater Omaha Public Access Unix has been acquired by Novia Internetworking as of September 1, 1996. Novia will assume ownership of the gonix.com domain and intends to keep it active (aliased to novia.net) for the foreseeable future. This means that you may use either the new novia.net addresses, listed below, or the old gonix.com addresses for the Amateur Radio Elmers Resource Directory. I'd like to thank the administrators of Gonix for their outstanding support of this resource over the years, and look forward to a fruitful relationship with Novia Internetworking for some time to come.]

In order to standardize the Internet resource notation used in this Directory, I've decided to adopt Uniform Resource Locator (URL) format throughout. In addition to being a straightforward, human-readable, format for specifying File Transfer Protocol (FTP) archives, Gopher and World-Wide Web (WWW) servers, and Usenet newsgroups, it is also amenable to formatting as hypertext links in Hypertext Markup Language (HTML). For example, users viewing this document at designated World-Wide Web Servers (see "How may I obtain the latest copy of the Elmers List?" below) will see all URL's converted to hypertext links on their WWW client. Rather than fumbling with the various conventions of FTP, Gopher, WWW, and Usenet News software, the document or directory referenced by a hypertext link is but one mouse-click (or key-click) away.

While I'm happy to incorporate the latest and most popular information-formatting standards into the documents that I maintain, I really can't allow myself to be dragged into the role of a WWW help-desk for all of the Internet. Please understand this when I politely refer you to other Elmers, easily-obtainable on-line

documentation, or even local expertise such as resident gurus, consultants, or help-desks at your school, company, or information service provider.

The URL format is easily mapped into human FTP, Telnet, Gopher, and Usenet News reader commands. For example:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/README

Anonymous FTP to ftp.cs.buffalo.edu and get the file README under the /pub/ham-radio directory.

gopher://oes1.oes.ca.gov:5555/

Access the Gopher root page at oes1.oes.ca.gov via non-standard port 5555 (if the standard Gopher port of 70 was used, the ":5555" part would be replaced by ":70" or most likely not appear at all).

telnet://callsign.cs.buffalo.edu:2000/

Initiate a Telnet (remote terminal) session with callsign.cs.buffalo.edu via non-standard port 2000 (if the standard Telnet port of 23 was used, the ":2000" part would be replaced by ":23" or most likely not appear at all).

news:rec.radio.info

Access the rec.radio.info newsgroup on your Usenet newsreader from your local news server.

URL's that start with:

http:

Are only accessible via WWW client software or "browsers".

For more information about URL formats, see:

ftp://nis.nsf.net/documents/rfc/rfc1630.txt
http://www.w3.org/hypertext/WWW/Addressing/Addressing.html

Disclaimer: While I have personally confirmed the accuracy of all URL's through the Lynx WWW client, any referenced documents external to this document are subject to future changes beyond my control. In addition, with networks and their administration being what it is, many services with up-to-date URL's may be temporarily unreachable. Please consult with your local gurus, consulting staff, or help-desk to confirm that it's a non-local problem, then ask the Elmer him or herself (me in the case of URL's which appear outside of individual entries). The currency and accuracy of URL's should be at least no worse than that of the Elmers entries themselves (which are each individually confirmed by me every 2 years, and updated within 1 month on request of the Elmer).

A Brief Historical Overview:

If there is any one constant in the changing state of the communications art, it is that "Hams" (Amateur Radio Operators) have always been on the forefront of it. Rumors abound where the term "Ham" came from. Some of the more amusing are described in the list of Frequently Asked Questions for this newsgroup.

Regardless of origin of the name, a "Ham" is universally recognizable as one who experiments in radio and communications.

Whether it be constructing a low-power CW radio with vacuum tubes, or designing TCP/IP packet networks, such experimentation has historically spilled over into the mainstream such as was the case with Howard Armstrong, who developed the regenerative oscillator and FM radio, or General Curtis LeMay (W6EZV) who was instrumental in making Single-Sideband the communications standard for the Strategic Air Command (1946-1992, now reorganized into a joint command called USSTRATCOM) and eventually the U.S. Air Force. Although packet-switching techniques originated from DARPA (Defense Advanced Research Projects Agency) and the ARPANet, no one can deny the tremendous influence that amateurs have had in demonstrating the viability of TCP/IP and AX.25 communications via radio links. The efforts of AMSAT (the Amateur Satellite Corporation), including the development of many ham satellites and the low-orbiting Microsats (communications satellites no bigger than a breadbox that use store-and-forward packet techniques), have certainly advanced the state-of-the-art in communications, one of the defined purposes of the Amateur Radio Service, as recognized by international treaty.

Since in many cases hams are writing "the book", there is often no "book" or other established reference for a beginner to refer to. Traditionally, information has been passed on from ham to ham via word-of-mouth. Like many of the traditional crafts, a variation of the Master-Apprentice system has emerged, the Elmer-Novice relationship. Called "Elmers" because they are usually older and wiser, having the benefit of many years in the hobby, including several failed projects, and an electric shock or two, they have traditionally been the mainstay of amateur radio, and the source of many new hams, particularly those interested in working on emerging technologies.

Even more importantly, Elmers provided an outlet for the impatient newcomer who wanted "to know everything, and right away." Faced with such a request, a good Elmer will smile and proceed to lead the novice through some project or operating experience. Several hours, days, or weeks later, the novice would have his answers, but would have earned them. Even better, the sense of accomplishment would boost the novice's confidence and nudge him or her down the road to being a model, experienced ham operator.

Many present hams feel that such an experience is missing today. In today's hustle-bustle world, the response to such natural curiosity and desire to learn is, more often than not, "I'm too busy" or "RTFM."

As a result, the quality of new hams declines and the knowledge and operating habits they develop in their first formative months and years leave much to be desired. And the very same hams who claim that they "can't understand the new generation" also, in almost the same breath, lament about the "decline of amateur radio."

What is an Elmer today?

An Elmer today is of any age, male or female, who has some expertise and is willing to share it with beginners. Elmers don't even need to be licensed amateurs, just people with knowledge in some area of electronics or communications technology.

What is an Internet Elmer?

With the ever-widening scope of the Internet, the amateur radio newsgroups on Usenet, and now the World-Wide Web, the potential for Elmers to share their knowledge to a wide audience has never been greater. To that end, I maintain a list of such Elmers. Volunteers need only send me their name, E-mail address, and area(s) of expertise. URL-format pointers to resources they maintain, such as WWW home pages or FTP archives, would also be quite welcome. The list has gotten large enough that there should be plenty of suitable examples to model your entry after. If you need some further assistance formatting your entry, drop me a line and tell me a bit about yourself. Ironically, sometimes the best Elmers write to me saying, "I'm not an expert, but..."

As part of the Elmers List's entry into the World-Wide Web, I've also provided a formatted WWW Registration Form. It may be accessed from:

http://www.novia.net/~pschleck/elmers/register.html

I have set up an administrivia mailbox for correspondence related to this list (elmers-request@novia.net, the default Reply-To: of this message). I would prefer that all such correspondence be directed to that address. In addition to saving it into a special folder, my incoming E-mail filter will also send you an automated return-receipt. While I can guarantee that I will read all mail sent to elmers-request before the next month's posting of the list, mail sent to pschleck may not necessarily get reviewed for some time (although all E-mail sent to me is certainly read with interest *eventually*).

Those desiring a more extensive list, or who need more specific assistance, are encouraged to contact Rosalie White, WA1STO, Educational Services Manager at the American Radio Relay League, 225 Main St., Newington, CT 06111 or via electronic mail addressed to rwhite@arrl.org.

How may I obtain the latest copy of the Elmers List?

There are currently 6 ways of obtaining the Elmers List. Any site at least reachable by Internet E-mail can use options 5 or 6:

1. World-Wide Web (WWW): This is the recommended method for accessing the Elmers list, as it allows this resource to be viewed as hypertext. The home site at www.novia.net features immediate updates each month, hypertext-linked subject and geographic indexes, keyword searching, and registration and feedback forms. The other two sites use automatically-converted versions of the Usenet news articles, but are still usable, particularly if you are outside North America. The site marked with an asterisk also offers Wide-Area Information Service (WAIS) index searching by keyword for all Usenet News FAQ's:
+ http://www.novia.net/~pschleck/elmers/
+
http://www.lib.ox.ac.uk/internet/news/faq/rec.radio.amateur.misc.html
+ http://www.cs.ruu.nl/cgi-bin/faqwais *
(Note: Because of maintenance problems - FAQ documents not being promptly updated in particular - the sites at Ohio State and Smart Pages are no longer recommended for accessing a current copy of the Elmers List and have been removed from the above list.)
see also the newsgroups under comp.infosystems.www.* (I haven't listed URL's for all of the newsgroups under this hierarchy as there are now about a dozen of them (!!!).)
2. Usenet News: This was the original distribution medium for the Elmers list. It continues to be supported for users who cannot access the World-Wide Web. Since the document uses URL's throughout, the news article version may also be viewed as hypertext via some mail and news readers. The latest copy of the list can be found in the news articles with the Subjects of "Amateur Radio: Elmers Resource Directory [A-*]," "Amateur Radio: Elmers Resource Directory [*-*]," and "Amateur Radio Elmers Resource Directory [*-Z]" (The * represents a wildcard character, as the need to split the list evenly, as well as keep all parts under the 64K message limit for Usenet, requires that I adjust the split occasionally). Since the list is cross-posted to the following newsgroups:
+ news:rec.radio.amateur.misc
+ news:rec.radio.info
+ news:rec.answers
+ news:news.answers
on the first Monday of each month, with an expiration date 6 weeks into the future, there should always be a copy available at most news sites. Check your newsreader documentation for information about reading previously-read articles or articles that are "threaded" to this one. Also complain to your local news administrator (E-mail to "news" or "usenet" on your local host) if your local news server is configured to ignore Expires headers (and thus prematurely delete the articles) in worthwhile, mostly moderated, information newsgroups like those listed above.

3. Anonymous FTP: If your site is directly connected to the Internet,
you may retrieve the latest copy via File Transfer Protocol (FTP)
from the following sites:
+ ftp://ftp.novia.net/customers/pschleck/elmers/
+ ftp://ftp.cs.buffalo.edu/pub/ham-radio/
+
ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/elm
ers/
+ ftp://ftp.uu.net/usenet/news.answers/radio/ham-radio/elmers/
4. Internet Gopher: The latest copy of the list should be available
from the following Gopher sites:
+ gopher://jupiter.sun.csd.unb.ca/
+ gopher://gopher.univ-lyon1.fr/
+ gopher://ftp.win.tue.nl/
+ gopher://gopher.win.tue.nl/
see also news:comp.infosystems.gopher
5. Mailing-List: Since the list is cross-posted to rec.radio.info,
the latest copy may be obtained from the mailing-list gateway for
that newsgroup (along with many other informational articles about
radio) when it is published each month. To subscribe, send E-mail
to:
listserv@ucsd.edu
and in the BODY (not the Subject) of the message, write:

subscribe radio-info
The server may not be able to determine your return address. In
that case write:

subscribe radio-info (your E-mail address)
You should get an acknowledgement very shortly.
6. Mail-Server: If you don't want to read through the entire gateway
of rec.radio.info, or want a copy of the list right away, send
E-mail to:
ftpmail@ftp.novia.net
and in the BODY (not the Subject) of the message, write:

open
get /customers/pschleck/elmers/admin
get /customers/pschleck/elmers/index/subject
get /customers/pschleck/elmers/index/geographic
get /customers/pschleck/elmers/list/part1
get /customers/pschleck/elmers/list/part2
get /customers/pschleck/elmers/list/part3
get /customers/pschleck/elmers/list/part4
get /customers/pschleck/elmers/diff

Alternatively, send E-mail to:
mail-server@rtfm.mit.edu
and in the BODY (not the Subject) of the message, write:

send usenet/news.answers/radio/ham-radio/elmers/admin
send usenet/news.answers/radio/ham-radio/elmers/index/subject

```
send usenet/news.answers/radio/ham-radio/elmers/index/geographic
send usenet/news.answers/radio/ham-radio/elmers/list/part1
send usenet/news.answers/radio/ham-radio/elmers/list/part2
send usenet/news.answers/radio/ham-radio/elmers/list/part3
send usenet/news.answers/radio/ham-radio/elmers/list/part4
send usenet/news.answers/radio/ham-radio/elmers/diff

and the latest copy of the list should be sent to you E-mail
within 24 hours (the mail-server uses batch priority to reduce
system demand).

------------------------------------------------------------------

How may I contribute to the Elmers List?

By using this resource, you are benefitting the net by obtaining
assistance in the fastest and most efficient way possible. By
volunteering to appear on this list, you are contributing to the good
reputation of the radio-related newsgroups.

Thanks to all the volunteer Elmers, as well as courteous list users,
for making this service a success.

mattd@branson.org -- send here first, please!
mdaless@ocf.berkeley.edu

I cannot claim to be an expert in any field, but I did participate in
SAREX as the project coordinator for our school (The Branson School)
in the STS-64 mission. I will be happy to help anybody else who is
interested in any and all aspects of the SAREX project. I also know a
little bit about UNIX administration, but I find myself asking
questions more often than answering them.

I am a high school senior, so my real area of expertise is getting
young people involved in ham radio. I was a speaker at the Dayton
HamVention Youth Forum, and am active in recruiting in my local
community.

Please direct any feedback, submissions, or administrivia regarding
these resources to my E-mail address above.

I've been an active Linux advocate since it first appeared on the
Internet. I was looking for an operating system that would better meet
the needs of my interest in Amateur Radio and provide me with an
environment in which I could actively experiment and develop. Linux
provides that and I've been promoting its use within Amateur Radio
ever since.

I'm an early contributing member of the Linux Documentation Project,
and you'll find the amassed works for it at:

http://sunsite.unc.edu/mdw/

ampr.org IP Coordinator for Sydney, Australia Metropolitan Area subnet
(44.136.xxx.xxx)

(I'm also the co-administrator of the Sydney University of Technology
Internet/ampr.org gateway.)

I'm happy to assist with information relating to:

* Linux, especially when related to Amateur Radio.
* Amateur Radio Internet Gateways

The purpose of this list is to allow discussion about commercial land-mobile radio equipment, its use and maintenance.

Owner of the Military Affiliate Radio Service (MARS) Members Mailing List.

The purpose of this list is to allow discussion about MARS (Military Affiliated Radio Service) activities. The list is open to all branches of MARS.

To subscribe to or unsubscribe from either of the above lists, please send electronic mail to:

listserv@stat.com

and include the command:

subscribe list-name

or

unsubscribe list-name

as the first line of your message, where list-name is either
land-mobile-radio or mars-list. An acknowledgement/welcome message
should follow very shortly.

Moderator of rec.radio.info newsgroup:

news:rec.radio.info

Please direct all rec.radio.info submissions to
rec-radio-info@stat.com and all feedback and administrivia to
rec-radio-request@stat.com.

I am available most days; work from home. I am especially interested in teaching the practical side of ham radio technology. I will help troubleshoot kits, old radios, etc., but will expect the new or prospective ham to pitch in.

Expertise gained from over 40 years of ham radio and almost as many years in broadcast engineering.

Florida's "Unofficial" Amateur Packet Reporting System (APRS) Coordinator

Florida APRS Mailing List

The address of the list is aprs-fl@tapr.org and you can subscribe by
sending mail to listserv@tapr.org with the text "join aprs-fl".

Florida APRS World-Wide Web Page:

http://www.magg.net/~n2czf/aprs.html

I've been active 24 hours a day on HF and VHF APRS since 1993. I've
attempted to make APRS easier for others in the state by doing
presentations at hamfests and club meetings. I formed the aprs-fl
mailing list thru TAPR and maintain the Florida APRS World-Wide Web
Page so that other newcomers can have all the information they need in
one place. I'm employed as a 2-way radio technician and attempt to
make other peoples "junk" radios available to new amateurs. I'm also
interested in 10 GHz and above communications.

76 McDonald Street S Kentrol FTP Site:
Arnprior ON K7S 2W5 Canada ftp://ftp.synapse.net/private/k/kentrol/

Kentrol is a Windows 3x control program for Kenwood HF transceivers and the R-5000 receiver, which has built-in logging and memory-management capabilities. Since its introduction in 1991, Kentrol has set the standard for Windows-based rig automation, and new features continue to be added regularly. SkedMan is an automated sked manager for Kentrol. Enter schedule data, set alarms, and when an alarm goes off, SkedMan uses - even launches - Kentrol to tune it in.

Kentrol and SkedMan are shareware, so if you haven't tried them, you are most welcome to do so.

Eran Glago KD6KVO

glago@aol.com

I am into public service, and also ARES/RACES. I am the Emergency Coordinator for both organizations in Sonoma Valley, Sonoma county, San Francisco Section of California.

We do ARES and RACES as one program here, and actually lean more towards RACES because the government entities are so supportive.

I like to encourage newer hams to participate in the events for which I coordinate the communications. It's ideal training for emergency services, and it's fun, too. Codeless Technicians who can't participate on most HF NTS traffic nets have a real role to play here, as we generally use VHF and UHF, and these amateurs are instrumental with their enthusiasm in filling the rosters.

It's also sometimes a good initiator for those new hams who are self-conscious talking with other, experienced hams one-on-one, but are OK talking formally to a net control station. Similarly, I try to encourage those new hams who became hams so they could talk to their ham spouses, and all you ever hear them do is talk to their spouses and to no-one else. While that's perfectly OK in and of itself, public service is a good way to break out of that mold and get more fun from radio while really helping out.

I co-maintain the Boston Amateur Radio Club anonymous FTP file archives with Phil Temples, K9HI (phil@temples.com).

A sampling of the archives include:

A virtually complete archive of all ARRL bulletins since 1992 is available at:

ftp://ftp.barc.org/pub/hamradio/barc/w1aw-list/

A mirror of all files available from the ARRL info server is also available:

ftp://ftp.barc.org/pub/hamradio/arrl/infoserv/

The ARRL infoserver mirror has FCC Part 97 (U.S. Amateur Radio Service Rules and Regulations) at:

ftp://ftp.barc.org/pub/hamradio/arrl/infoserv/rib/part97.txt

Programs mentioned in QST are in:

ftp://ftp.barc.org/pub/hamradio/arrl/qst-binaries/

Amateur Radio Newsline is now also being archived, too:

ftp://ftp.barc.org/pub/hamradio/docs/newsline/

Macintosh Amateur Radio Software Archive:

ftp://ftp.barc.org/pub/hamradio/mac/

Ham Radio and More, the radio show carried live every Sunday (6pm - 7pm EST) on the Talk America Radio Network, now has a World-Wide Web home page:

http://www.barc.org/barc/ham-more/ham-more.html

Please direct any feedback, submissions, or administrivia regarding
these resources to my E-mail address above.

Ken Gunton WB6QWF

kenny@erinet.com

Microwave Components World-Wide Web Page:

http://www.erinet.com/kenny/microwave.html

It changes from time to time, so stop back often! Don't see the
component you want? Just call, fax your spec, or e-mail and attach
your drawing or spec for a quick quote at BIG savings.

My company, Techlock Distributing, sells RF and microwave components
of many different types. I own the company, and it's a small, one-man
operation. While I don't sell Ham equipment per se, I have sold some
dividers, etc. to hams for their use.

ARRL Laboratory Engineer

* Radio Frequency Interference (RFI) matters
* Equipment Testing

My survey of automotive EMI problems is mostly complete. The results are in September 1994 QST, including warranty and customer service information for most automobile manufacturers (many of whom have published installation guidelines).

I am also continuing to pursue more formal contacts and standards-making through the EMR and EMI Standards Committee of the Society of Automotive Engineers (SAE), of which I am a member.

Copies of General Motors installation guidelines are available. Saturn allegedly has a video on mobile installation, but none of the dealers seem to know about it. I have a call into one of my low friends in high places. :-)

If anyone would like a copy of the GM installation guidelines, send a 9X12" SASE with two units of postage *and* a specific request for the "GM Installation Guidelines" to the ARRL Technical Department Secretary, 225 Main St, Newington, CT 06111. A copy has been reprinted in the ARRL book -- Radio Frequency Interference -- How to Find It and Fix It.

EMI/RFI Resource List and RFI Tips package available. A business SASE with 98 cents postage is appreciated. Please specify the desired documents in your correspondence.

The FCC has released the results of a telephone interference survey just completed.

If you would like a copy of the survey, which includes a list of telephone models checked, send an SASE with two units of first class postage to the Technical Information Service at ARRL HQ. Alternatively, you may obtain an electronic copy from the info server below.

If leakage from your local Cable TV operator is interfering with the Amateur Radio Service, it is in violation of the provisions of Part 76 of the FCC regulations.

I would first direct the problem toward the cable company system engineer or service manager. Chances are the "front-line" people who answer the phone don't know what you are talking about.

If this is not effective, contact me here at ARRL HQ. I can put you in contact with our liaison to the National Cable Telecasters Association. This liaison will help your cable operator understand their responsibilities.

For CATV interference problems in general, I recommend you obtain our Radio Frequency Interference Book. If you are a League Member, you can also get a copy of the ARRL Technical Information Service info package on CATVI -- "EMI/RFI - CATV" by sending a LARGE SASE with 3 stamps on it to the ARRL Technical Department Secretary, 225 Main St, Newington CT 06111. This package is a reprint of an article I wrote for Communications Technology -- the Journal of the Society of Cable Television Engineers. We submitted it to "their" journal because we felt that it would carry more weight with the cable companies.

If you have any questions after you have read the material, contact me here at HQ. I can usually get back to you within a few days to offer some additional help.

Many amateur radio informational documents (including EMI/RFI files) are also available from the ARRL info server. Send E-mail to

info@arrl.org with the word "HELP" in the message body.

See Cheyenne Greatorex's entry for information about the ARRL Anonymous FTP Archive and David Newkirk's entry for information about the ARRL World-Wide Web Home Page.

Mobile Antenna Systems and Installation (Primarily HF)

* power distribution
* frame grounding
* antenna selection and construction
* mounting the rig
* useful accessories
* Keeping it Simple (avoiding task overload)

I have agreed to provide a new home for the "Boat Anchor" mail list, with the blessings of Paul Prescott, N1AAC, who took over from Our Esteemed Founder Jim Lockwood, KM6NK. I have also agreed to take over the rec.radio.amateur.* Working Group mail list, formerly maintained by Ian Kluft, KO6YQ. In addition, a new mailing list devoted to homebrewing tube transmitters and receivers ("Glowbugs," a sort of intersection between Boatanchors and QRP) has been created.

The mailing list addresses are:

* boatanchors@ThePorch.com (*)
* rra-wg@ThePorch.com
* glowbugs@ThePorch.com

Use these addresses for messages of general interest to the entire group. Please don't use them to subscribe, change address, etc.

(*) Effective 15 March 1996, the BoatAnchors list went to a subscription-only list, with $12 US per year as "dues" to support the list.

With monthly costs for Net access at $350 US/month and telephone line charges of $50 US plus, we are not getting rich. The fee was set after much consultation and wrangling, and was designed to cover the costs of running the list... and hopefully provide a surplus to upgrade the services we can provide, like better mail delivery, larger archives, etc.

The new automated list manager address is

ListProc@ThePorch.com

Use this for subscribing, unsubscribing, getting archived info,
getting the FAQ message, changing your address, etc.

To subscribe, send a message to this address with "subscribe
boatanchors <your name>" or "subscribe rra-wg <your name>" Similarly,
to unsubscribe, replace "subscribe" with "unsubscribe"

The new list owner address is

ListOwn@jackatak.ThePorch.com

Use this address only when there is a problem which really truly can't
be resolved otherwise.

High-Performance Software Modem Project

Recently I've been working on a prototype SQPSK (staggered quadrature phase shift keyed) modem for the amateur satellite channel. This modem is implemented totally in software running on a PC with an ordinary (non-DSP) Soundblaster card. It runs at 1200 bps and fits into a SSB transceiver bandwidth.

I've made good progress and have put some info up on my web page about it, including an audio file to show what it sounds like in noise when the signal is still copyable, available from:

http://www.qualcomm.com/people/pkarn/ham.html

Watch that page for an announcement of when I actually release the code, which I plan to integrate into KA9Q NOS.

Spread Spectrum

I've been trying to answer the question of consequences of promoting relatively wide-band digital modes on band occupancy and throughput (i.e., What gets optimized? Are there tradeoffs in quality vs. quantity?) in the context of the spread spectrum rules debate, but I think it needs to be a much wider discussion. See my reply comments to the FCC on this issue:

http://www.qualcomm.com/people/pkarn/papers/mysscomments.html

(See also Steve Bible for more information on Spread Spectrum)

[Editor's Note: I'm honored by the presence of many advanced-level Elmers in this directory, including Jeffrey Angus, Gary Coffman, and now Phil Karn. Phil has graciously agreed to appear in this directory for the purpose of elmering and technical exchange for the advanced topics listed above. As with all of my Elmers, please respect their time by only seeking assistance from them for the topics under which they are listed. There are many Elmers willing to answer more beginning-level packet radio questions, including basic questions about IBM PC hardware, TCP/IP and NOS. Consult the "IBM PERSONAL COMPUTER (PC) AND CLONES" and "PACKET AND DIGITAL NETWORKING" categories in the Subject Quick-Search Index for a complete list.]

Paul Keezer NX1P

logview@keez.tiac.net

Finally a WWW page has been set up for HamView products, a Windows based Ham Radio program. This page can now be located at:

http://www.tiac.net/users/pkeezer/hamview/

There is an upgrade file right now for Win95, but the bug has only
been corrected in Logview 5.0. Come and check us out.

de NA4G, "Boat Anchor Bob", an ol' cw fart .....

If I can be of assistance in older equipment, junk-boxing your way to
hamdom, the cheapskate's approach, let me know.

22 yrs a ham, extra class, mostly cw, mostly boat anchors and radio in
the traditional sense.

{Telegraphy has been in my family for almost 100 years!}

CWISTS Friday Night Fist Function

Standard time: Friday Nights at MIDNIGHT LOCAL TIME

Standard freq:
80 meters --- 3702.5 kHz for all hands.
40 meters --- 7102.5 kHz alternate, for all hands
(between the heterodynes, someone scout out a better QRG)

Standard calling signal:
CWIST IMI DE <yourcall> K (if there are no control stations
calling for you to check in), or, CWIST DE <yourcall> K (if
there is a control station inviting checkins) (The alternative
check in for those OTs with salt behind the ears is a simple DE
to get the control station's ears followed by DE <yourcall> K
when the control station acknowledges.)

Note:
A simple informal net style protocol will generally be used,
unless no control station assumes control for the evening, in
which case it is an open roundtable format discussion group.

Note:
The midnight local time gathering is designed to maximize the number of checkins spread out over the world, so less confusion and more checkins are heard. The hope is that someone will be aboard almost anywhere and be heard at least locally, anywhere in the world.

Definition:
A CWIST is a person with an active interest in the PRACTICE and USE of continuous wave radiotelegraphy as directly is applicable to amateur radio. Such PRACTICE and USE may take the form of learning about radiotelegraphy and its history in amateur/commercial areas, its application to radio telecommunication, the practicing of the art and craft of radiotelegraphy, and the refining and developing of the technology of radiotelegraphy.

Author of NA4G's National Electrical Code for Hams

ABSTRACT

This work was presented as a talk to the Homebrew Special Interest Group (HB-SIG) of the Raleigh Amateur Radio Society (RARS), on 15 January, 1991 and was revised for another presentation on 26 January, 1994.

This document contains excerpts of the National Electrical Code (NFPA 70-1990) that, in the author's opinion, apply to the installation of amateur radio equipment as would commonly be found in most amateur radio stations. Direct excerpts from the Code are contained within inset quotations. Paraphrased excerpts from the Code are itemized. The author's interpretation and discussion of the Code is set full-width. The author's interpretation and discussion of various sections of the Code is not meant to be all-encompassing, nor the official interpretation of the National Fire Protection Association, nor of any official governing body having legal authority of jurisdiction over electrical installations, but is meant to be used as a teaching tool for amateur radio operators.

For ease of access, the group of files have been 'rolled into one' both in tar-compress (862K, for Unix jocks) and PKZIP 2.04g (732K, for MS-DOS users) formats. Both are available from:

ftp://sunsite.unc.edu/pub/academic/agriculture/agronomy/ham/things-to-build/na4g/

Ok.... Now the $64,000.00 question is... Where did you *get* them? I've been looking for a set for *months* now! (I've become a `day sleeper' because of certain circumstances and with a hyper-active 4yr old and 4 dogs it has become fairly hard at times to get *any* sleep some days.)

|> assigned? Was I hearing things, maybe it was TA8T?

T8 will become the new prefix of Belau Island. They loose their current
prefix (KC6, if I am correct) by the end of the year.

I worked T88T in CQWWDX and sent my cards via N5OK.

197. 1997 ARRL VEC Test Fee will be $6.25

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-05 00:00:00 UTC
From: "Bart Jahnke, KB9NM ARRL/VEC" <vec@arrl.org>
Message-ID: <327F9EC9.2645@arrl.org>
Source record: 213308

In a October 31, 1996 Public Notice, the FCC has announced its volunteer examiner expense reimbursement maximum as $6.26 for calendar year 1997.

Accordingly, the ARRL/VEC has set its 1997 test fee at $6.25.

This increase, up from a 1996 maximum of $6.07, is based on a 3.13% increase in the Department of Labor Consumer Price Index (CPI) over the period September 1995 to September 1996.

As an ARRL/VEC policy, examinations which include only Elements 1A (5 WPM) and/or Element 2 (Novice written examination) will not be charged the standard fee in 1997. Retests offered for retaking any examination element after it has been initially failed, other than Elements 1A or 2, will also be charged the $6.25 fee. Morse code exemption applicants will be charged the standard $6.25 fee in 1997.

Any questions can be directed to the ARRL/VEC at 860-594-0300, or email to "vec@arrl.org".

Marc Illsley Clarke (mic@hpfimic.fc.hp.com) wrote:

: The SMA-501 measures about 4 S-meter units lower than the SMA-3 on my
: FT-50R when listening to the same repeater. If an FT-50R's S-meter
: uses the standard 6 dB per S-unit (and I have no idea whether it does
: or not), then the SMA-501 is approximately 24 dB worse than the SMA-3
: on receive in the VHF band. I have not compared the two on UHF.

It's very unlikely that the S-meter is so calibrated. It's not even
very likely that it reads logarithmically over very much of its range.
Let's break out some of those HP signal generators and test it :-).

: ... So I am searching for a real SMA
: extendible 1/2 wave. Any pointers to manufacturers or web sites?

I (perhaps wrongly) seem to remember hearing something about these.
Manufacturers to check include AEA, MFJ, Smiley, Larson, Diamond, Comet,
Valor, etc.

: While we are on the subject of FT-50R antennas, has anyone tried the
: Antennas West idea of sticking a 19.25 inch piece of wire dangling
: from the ground connection of the SMA connector to act as a ground
: plane for the stick duck to work against? Did it help?

I think we discussed this a while back and concluded that the improvement
was minimal at best. Perhaps we'll hear some positive comments...my
experience was that it made no real difference. It's certainly easy
enough to try...

206. Amateur radio licensing fee for various countries

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-05 00:00:00 UTC
From: varpenns@usaor.net
Message-ID: <55oina$do1@news.usaor.net>
Source record: 213317

I would appreciate it if anyone knows where I could find a listing of various countries and the licensing fees they charge for amateur radio licenses. Is there an internet source for this information?

Please email me if you know.

Thanks for your help.

Don

208. ARLB078 Gate 2 calls issued

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-05 00:00:00 UTC
From: w1aw@arrl.org
Message-ID: <$arlb078.1996@arrl.org>
Source record: 213319
Cross-posted to: rec.radio.info,rec.radio.amateur.misc

SB QST @ ARL $ARLB078
ARLB078 Gate 2 calls issued

ZCZC AG58
QST de W1AW
ARRL Bulletin 78 ARLB078
From ARRL Headquarters
Newington CT November 5, 1996
To all radio amateurs

SB QST ARL ARLB078
ARLB078 Gate 2 calls issued

Vanity call sign Gate 2 calls processed.

The FCC has processed the vanity call sign program Gate 2 applications it received on September 23. The logjam broke just before the end of business for the day at the FCC's Gettysburg, Pennsylvania, office, where the amateur computer system had been down for more than a week. A spokesman at the FCC said the computer system was finally fixed Tuesday, November 5, and the approximately 4500 first-day vanity applications were successfully run.

Applicants can check for their new call signs via the ARRLWeb page at http://www.arrl.org/fcc/fccld.html.

The week-long computer problems had not only affected the vanity program but caused the FCC to rescind all call sign grants after October 24 because of widespread errors. In some cases, the FCC's Gettysburg office had reissued call signs that had already been issued. An FCC spokesman said that the unspecified computer problems were not related to the vanity call sign program.

The FCC says it wants to see how the day-one processing fared before it attempts to process vanity call sign applications for subsequent days. This should happen within ''a few days,'' a spokesman at Gettysburg said. Day-one applicants also can check the popular database programs on the Internet to find out if they got one of their call sign choices. The KI4HN Web page lists vanity assignments at http://www.webbuild.com/~ki4hn/vanity.htm. Other good choices include the AC6PN call sign server, http://www.rdatasys.com/~mdowning/fcc/callsign.html and the CallBook Server (CBS) Summary at http://www.lantz.com/htbin/cbs_today.

The FCC will dismiss applications if it was unable to grant one of the call sign choices. Applicants who did not get one of their

choices will have to apply in writing for a refund of the 30 dollar filing fee.

The FCC has not announced opening dates for vanity Gates 3 and 4.

One of our buddies has perplexing ignition noise in a 92 Lincoln Town Car with an ICOM 706. Only apparent in 2nd and 3rd gear, on acceleration. Dissappears when you let off the gas.

HELP!!

Call Howie W2HL (recently AA2ND) at 718 318 1708.

Thanks!!!!!!!

211. WN3K now is N9GG.

Now one can only wonder how long it will be before day 2 calls are
issued?

Terry - WB4F

The easiest place to check for new Gate 2 calls is via the ARRL web page.
Just goto www.arrl.org and click on the Gate 2 Flash item.

Source record: 213327

I need some help for my dad, who is 92, he is ham radio operator and has been one since he was 19, (alot of years). He has a Kenwood TS530S, which I understand is probably as old as he is. It has served him well until a few weeks ago when we had a terrible storm. It works so he says but it out of tune and then he says that it has some sort of odd sounds, I have no idea what that means, sorry. I have tried to help him with the book but I know nothing about any of the electronic stuff and although he has had that thing apart and back together again many times over the years I don't think he remembers how to do all that stuff anymore. I live in Northeast Florida and I need to know someplace I can send this thing to be fixed or take it there (either FL or South Georgia) if it is not too far, this is his only hobby and he is now without anything to occupy his time and I know that he misses it, but I don't know where to go. Can anyone out there help me get my dad back on the air? Thanks in advance I will check this ng or you can e-mail me.

Linda

233. Kenwood 241A Display Blink Out Problem

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-05 00:00:00 UTC
From: dber@tiac.com
Message-ID: <327e8234.1667322@news.tiac.net>
Source record: 213514

I'm having a small problem with my Kenwood 241A 2M mobile rig.

Three times in the past two months I've noticed that my 241A display will blank out for a second or so and revert back to the "dim orange" background display and then be fully restored (as if the power cut out for a brief instant). It happened twice when pulling the key out of my car (the rig is not hooked to switched power -- it is connected to the massive harness that enters the firewall in my car - it was way too much trouble to run a new set of wires to the battery).

I chalked this up to some sort of power glitch when the key was being removed from the ignition... however, it finally happened after the car was warming up for 4-5 minutes. The display blanked out for a brief instant and then came back. I checked the wires and connections and all seems OK. Shook the radio and car a bit to see if I could make it happen, but no luck. I don't suspect poor connection because I would expect it to get worse or happen when the car is vibrating/moving (the first two times, the engine was off).

I use the radio quite frequently and have not had any other problems. It's so long between problems that I don't have any ideas how to figure out if it's the power cables external to the radio or the radio itself (or some other mysterious option).

None of the times this glitch occurred was I listening to audio from the unit, so I can't be sure it would even cut out the audio... it might just be a display problem?!?

Anyone else have a similar problem or any ideas for diagnosis?

Thanks much in advance,

Dave Bernazzani

>

Jim,

In your zeal to try to "one up" me, your technical ignorance again shows .. playing the tape faster will cause all of the frequencies, and therefore the bandwidth of the SSB signal, to increase ... this is wasteful ... besides, how would you propose to coordinate this to allow the gaps to all be used by filling them with other QSOs?

Obviously your proposal is impractical ... a digital solution is NOT. A digital system can burst the precomposed message using spectrally-efficient modulation techniques and can also coordinate the burst transmissions of many users to "fill the gaps" ... thus further increasing spectral efficiency.

Yes, I did say that ham radio is *supposed* to be a technical endeavour and that people with NO interest in or competence in the technical side are not what ham radio is supposed to be about.

I did NOT say that everyone should be an EE to be a ham ... to require *some* technical interest and competence is a FAR cry from req uiring everyone to be an EE ...

>
>>Your point? Who has even suggested that your dentist frien
>>should not become a ham...
>
>Carl has.

NO ... I did not ... I simply stated that if your friend has NO interest in ham radio, he's not a "real" ham in the sense of what ham radio is *supposed* to be and perhaps he is more suited to a "communicator" service like CB or GMRS or the new FRS (family radio service) ... those three services exist for the many people who wish to "yack" on the radio without having any technical skills or interests ... that's NOT what ham radio is for ...

Message-ID: <55m316$4ej$1@news3.microserve.net>
Source record: 213517
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.homebrew,sci.electronics.design,sci.electronics.components

There are many, Hewlett Packard 5082-3201, 5082-3202
5082-3203, 5082-3204 are all rated for 120watts when
used as a series 50ohm switch. They are useable from
T10Mhz to 8 Ghz and can be purchased from Penstock at
408-745-8100. The ARRL UHF/Microwave Project Manual
has a lot of info on PIN diode switches.

PIN diodes are special in the fact that they are
a diode with a intrinsic layer at the junction (PIN =
P Material + Intrinsic Layer + N Material). They
are very close to being equal to a pure resistor at
RF frequencies (low L & C) and exhibit very low
resistances (<1 ohm) when forward biased but very
high resistance when reverse biased (> 10K ohm).

To learn more about PIN Diodes contact HP and
request (or you might have to buy) their GaAs &
Silicon Products Designer' Catalog.

Hope this helped!

ALL 15 FCC monitoring stations were closed earlier this year.
The FCC has NOTHING left to monitor with to enforce rules!
Talk of "remote monitoring" is just that, TALK. It was a scheme
the FCC cooked up to fool Congress and lie to the public.
Under the rule of Chairman Reed Hundt, the FCC has had
the single WORST FCC Chairman in its history. Hundt cares
only about pleasing Bill Clinton and hiring more of his lawyer
buddies before the entire commission is disolved in the
next Congress.

<rest deleted>

Funny, today, in the Seattle WA area we didn't even have any emergency underway. My celphone calls were completed only 1 out of every 10 attempts due to, apparently, lack of capacity. Recently, my main road out to my house was slowed to a crawl - more of a standstill really - probably due to errant road construction crews. Like everyone else, I tried to use a celphone. No go. All circuits were busy.

When the weather turns bad (which is a heck of a lot up here), you may as well write off cellular for reliable communications. Cell systems are extremely "reliable" in their physical ability to continue functioning during disasters; only problem is that cellular has choked on its on success (38.7 million subscribers as of a month ago). Of course, they are taking steps to increase capacity ... but it is lagging behind their own growth. And quite frankly, I've witnessed a lot of dropped calls and failed handoffs to adjoining cells.

So, when an actual disaster hits, who are going to call? Your reliable celphone that can't complete calls into the fully functioning cellular system? Or an "old fashioned" conventional two-way radio system staffed by trained volunteers?

Fortunately, the rest of the county is not Lost Angeles. And ham radio ARES/RACES teams are functioning well and serving the public.

Maybe it has something to do with the fact that an extra class could pick his own call sign in the 70's ? You guys need to get out more - all this call sign envy and lack of sleep from the vanity program is going to make you age prematurely.

Well, if this is true - and I have only your word for it - then something is really awry,
to the best of my knowledge and belief jamming is illegal for hams no matter what the
circumstances. I believe that even if the other station were an intruder you still must not
jam it, but rather take whatever regulatory enforcement action is open.
So in my opinion, if you have evidence that a ham is jamming then you have a duty to lodge
a formal complaint. Anyone who intentionally jams should have their license revoked.
This doesn't mean I take your side your fight over a frequency, it only means jammers
should be removed from the air. Now if he were to get up in person on the frequency,
make a two way contact and politely explain his point of view and request operators to
vacate the frequency then that would be entirely different. But broadcasting is rude and
jamming is, in my opinion, illegal.

You cannot legally use the radio on business band frequencies even if
you could modify it, because it is not FCC type-accepted for use on
that band.

Just for your info.... no judgements or opinions offered.

Give your old radio and computer equipment new life! The Courage HANDI-HAM System teaches communications skills to persons with severe physical disabilities and sensory impairments. While our focus is Amateur Radio, the HANDI-HAM System also teaches computing and Internet skills, with emphasis on adaptive computing that promotes independence and that helps our disabled members reach their full potential.

Courage Center is entirely non-profit, and is a United Way agency. Your gift of equipment will be acknowledged with a formal letter and acknowledgment form for tax purposes.

We are happy to receive donations by UPS or mail. Please be sure to include a note stating that the item is a donation and to whom we should send an acknowledgment. If you visit us in person, we will be pleased to show you around and share a cup of coffee.

HANDI-HAMS serves members in all 50 states and many other countries. For more information about the program, please visit our Web site at http://www.mtn.org/handiham/

In article <55iev6$67f@li.oro.net>, jim@rst-engr.com says...
Jim--
Some years back FLYING magazine offered a 'shortwave' airband converter that ran off a 9-volt battery and allowed you to receive tower commuications and run them through your car radio. It plugged into the car antenna and then a coverter went into the car radio antenna plugin--you tuned the car radio to an empty spot around 1400 and you could get the tower from 8 miles out! Do you know of any plans or project articles that a person could build like that? It really was a better deal than the cheap portible radios--unfortunately someone stole it out of the Toyota it was in (along with the car stereo!)--it retailed for $29.99 and Western Radio was the manufacturer--the fellow died and I have no idea where the rest of his stock went.

Perhaps I spoke out of turn,(not currently living in S. Cal) but my
point was that there ARE other freq's available 908 MHz?, 6m noisy? well
thats why were radio amateurs how about building a good filter?
>
> I'm not sure we can blame Mike for the mess on 446.65.

Well, if the original post is accurate regarding his jamming or beacon
transmissions with a warning, I'd say its pretty much his doing.

It's pityful to see this kind of thing going on. Why not join in the fun
with another repeater group?, add a new remote site or a 10m FM link.
Seems like everyone has to have their own PRIVATE repeater these days.

> He is only a pawn of SCRRBA, which apparently decided that the frequency shall not >have
an 'open' repeater on it. The 'warning' transmitter cites references to SCRRBA
> coordination, but makes no mention of possible coordination of KJ6TQ by other

> repeater on the freq. is uncoordinated.

I'm not flaming you Bob (NO6B) so don't misinterpret but who the hell is
SCRRBA, what legal power do they have? I realize they are a coordinating
group but are they recognized by the FCC? I would think that if the
frequency has been occupied by an existing repeater that would be the
end of it. Does anyone know if these issues have been to court or not?

From: "Thomas J. Alessi" <Tom@Alessi.Com>
Message-ID: <327F5FCB.99C@Alessi.Com>
Source record: 213534

It is now day 43 of the "Big Wait" for Vanity Call Gate 2. And,
apparently, day 9 of the FCC Amature Radio Database being down.

This is just Unbelievable, and a fine example of our Govenment
Agencies in action. I administer a 911 Communications Center
which operates 24 hours a day, 7 days a week with a 99+% up time.
I can't believe that they can not fix a Server, Network or anything
else in one week's time. What are they hiding? Did they screw up?

This just goes to prove that the FCC should PRIVATIZE the entire
AMATEUR RADIO LICENSING SERVICE.

By the way, think about this... if they had processed the Vanity
calls by hand, as they were received (6 WEEKS AGO) they WOULD be
done by now with day one.

In my Opinion,

Tom Alessi, WB1L

256. FCC Public Notice - VECS TO SUBMIT LICENSE RENEWALS AND MODIFICATIONS ELECTRONICALLY

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-05 00:00:00 UTC
From: "Bart Jahnke, KB9NM ARRL/VEC" <vec@arrl.org>
Message-ID: <327F5F9E.40B1@arrl.org>
Source record: 213537

PUBLIC NOTICE

Federal Communications Commission
1919 M St., N.W.
Washington, D.C. 20554

Released: November 1, 1996

VECS TO SUBMIT LICENSE RENEWALS AND
MODIFICATIONS ELECTRONICALLY

On July 16, 1996, the Office of Operations of the Wireless Telecommunications Bureau issued an Order to permit Volunteer-Examiner Coordinators (VECs) in the Amateur Radio Service to electronically submit applications for license renewals and modifications. This procedure results in license modification and renewal being granted in one or two days after the Commission receives the data. This is significantly faster than would result from submitting these requests in document form. VECs may charge the applicant a fee for this service. Each VEC will determine its own fee, if any. VECs may choose whether or not they wish to offer this service. They are required to file applications for new licenses and upgrades of operator licenses as part of their duties in offering license examinations.

License modifications are changes in name or mailing address, or a call signfrom the sequential (non-vanity) call sign system.

On October 22, 1996, the FCC discontinued the printing and mailing of amateur service license renewal notices (FCC Form 610-R, Application for Renewal of Amateur Station License). The expiration date appears on our licensee database which is available via the Internet. Some private parties plan to implement a license renewal notification system. Applicants may utilize a VEC offering this service to submit their renewal
or modification application. They may also continue to submit their application document directly to the Commission. For either procedure, FCC Form 610 (Application for Amateur Operator/Primary Station License) must be used. It is available for downloading from the FCC's Internet homepage at http://www.fcc.gov/formpage.html, from the Fax-on-demand system by calling (202) 418-0177 from the handset of a fax machine, or from the FCC's forms contractor by calling (800) 418-FORM (3676).

For further information, please contact the Wireless Telecommunications Bureau Consumer Assistance Branch toll free at (800) 322-1117.

-FCC-

****
Additional note from FCC: At present, VECs can ONLY file such
applicantions for individuals. VECs may NOT file applications
electronically for CLUBS, MILITARY REC OR RACES stations at
this time.

For ARRL VEs:

At present, the ARRL/VEC will process at no charge (for FREE)
applications from ARRL Members only!

Also, we are aware that the W5YI VEC has implemented a license
renewal notification and processing system which includes
necessary FCC forms. A fee is being charged (as permitted by
FCC as described above) for applications which are processed
through the W5YI VEC.

I am not a ham but was a naval communicator for 20 years (1968-1988). When I enlisted, all radiomen were required to copy 18wpm to graduate from school. Some of us were selected for advanced school which was 1-6 weeks where you had to be proficient at 22wpm. There were rumblings then about learning this crap that we would never use. For the next 2 years I was on a coastal minesweeper in the Far East. Every message we received come in CW, broadcast by naval stations in the Western Pacific with speeds up to 28wpm. We kept a tape recorder on line when they speeded up to 28 as a "backup."

In the next ten years, I rarely used code. New graduates from school weren't even taught it although those desiring it could get it as special training. Each Navy ship was required to carry 1 communicator would was proficient. Despite all the rumors, there were always times we were required to communicate in CW. Mostly, in dealings with foreign navies and sometimes to communicate with foreign shore activities.

When I retired from the military, there was talk of even doing away with having any morse operators. I dunno what the status is now but morse has been around since the beginning and is the most reliable in getting through noise. Most military use satellite now and have trouble even communication with teletype over shortwave.

I really feel that morse will be around for a long long time. Proficiency is not that hard to attain. Once you attain it, it's like riding a bike!

This argument has been going on for 20-25 years. I suspect it will go on for a while longer.

Nice newsgroup, BTW.

I try to run SKN every year. It is a great cold winters night event, since most of us try to get the old BA's out and use the tubes to warm the shack as well.

I will be using with any luck a pair of Morrow Twins, donated to me by K5STR. If I can't get the Morrows finished I will be using a Drake TR-3 for 40 & 80, and a Collins KWM-1 for 20 with wire antenna's. I will also be using a beautiful hand built brass key donated to me by KE0GN. A real master machinist of unknown fame built this key.

This event is a lot of fun, and the best way to get your code speed up. It is amazing what a few hours of actual on the air work can acheive. Also you will find everyone working this contest will be a gentleperson and very friendly. I personally feel this is one of the high notes of Ham radio for those willing to slow down, and enjoy the conversations and get to know both your key, and the other hams.

I have included the rules and entry form below, pulled off of the oak.oakland.edu infoserver.

Enjoy- and welcome back to the hobby.

KI5GY Glenn Sparks

ARRL Straight Key Night Rules

1) Object: This is a friendly meeting on the air using straight keys. Suggested areas of operation of 80, 40, and 20 meters are 60 to 80 kHz from the lower band edges and 10 kHz from the lower Novice band edges.
2) Period: 24 hours UTC, from 7 PM EST December 31, until 7 PM EST January 1.
3) Exchange: When participating in SKN, use SKN instead of RST preceding the three-digit number to clue in passers-by.
4) Miscellaneous: This is not a contest; quick, contest-like exchanges are discouraged.
5) Reporting: Following SKN, send a list of stations worked, plus your vote for the best first heard (not necessarily one you've worked) and the most interesting QSO you had to ARRL HQ by January 10.

When Houston volenteers were cleaning up for the Republican National
convention a couple of years ago, they tried using cell phones to
coordinate work crews, it turned out to be completely unusable, they
finally got hams involved and things went much smoother. Cell phones
have their place, but coordinating crews is not one of them.

Sorry you don't think the code is a great separation between the types of communication. As in anything else, the harder you work for something, the harder your desire to keep it clean and pure. I can see tho that any explaination I give will just go by you unless of course I agree to drop the code (not likely). Pass the code, or use CB, GMRS, Tech amateur, etc. Your choice.

P.S I've heard this argument for thirty years in many ham shacks. I don't think the requirement is likely to change anytime soon.

From: "Alan J. Richer" <alan_richer@crd.lotus.com>
Message-ID: <327F7E76.D18@crd.lotus.com>
Source record: 213546

When this tumbled into my lap, the old Icom went into the trash...where I got it...8*)

The KDK FM-2030 seems to have a problem in its output network, as it motorbosts like it's way-off SWR even into a good antenna.

A schematic would be nice to fix this, as my fix rates with prints are good, but poking around with a 'scope a bit lower...

Anybody got them? The only manual listing from a vendor I've seen is from Sarrio.com, and for personal reasons I prefer not to deal there.

I assume that you want some sort of comprehensive listing as opposed to trying to gather dozens of old sectionals (by visiting airports across the country) and transcribing info from the sectional to some kind of database.

Almost all of the lower-end flight planning programs I've seen access a simple ASCII file for lat/lon info on VORs and airports. If I were doing a program I would just take one of these files and use it for my reference file. NAV4 is one such program, and you should be able to grab that at any aviation site or in the aviation forum on CompuServe. Just for grins, I might try the FAA's web site because there are several databases there and you might get lucky.

Good luck.

Tom:

I sure wouldn't make excuses for the FAA...unless they were warranted. I occasionally like to cry and whine about inconsequential issues just like you.

I have to guess that this is more than a matter of simply assigning callsigns (the part we REALLY care about). I could have easily written such a program and, after the data was entered, run the program on my home PC and been done by now. This program must be interfaced with their licensing system, which itself is comprehensive, and that interface with this new vanity assignment system is probably where the bugs are. Of course, I'm just guessing. I am also guessing that in Gate 1 they did it(the vanity assignment portion) by hand as apps were received because that was much more straightforward...you were either eligible or you weren't.

I can see why the FCC is being very careful. Just look at how emotional everyone is getting about this. If there are any mistakes, the world will certainly come to an end because it seems that we hams have nothing better to worry about. I, for one, will file a lawsuit and then burn down FCC headquarters!

> 'ol boys who look down on not only new people, but new ideas, people of
> other races, you name it. Neither we as hams, nor the world, needs these
> people.
>

For the past few days, I've been sitting around listening to "old hams" complain about one thing or another. Most of them are probably the same 75m people you refer to above. The nicest ham I met was out of town (for me) who sold me a great little handheld. He was excited that I had my new license, even if it was a no-code.

I took my test on Saturday. I tried for a general class license, and missed the theory by one question and the code by a mile. Then again, I've only got half the code learned, but I'll be ready for the next test next month. I'll even have the theory down. Maybe by then the FCC computers will be up and running. So instead of a general, I earned a tech-nocode.

But what I've learned is that Ham Radio has some serious problems. Instead of encouraging newcomers, it's distracting. At this weekend's testing, several newbies were talking about leaving and not taking the test. After all, ham radio is in so much "trouble."

It's disapointing to see the hobby I so wanted to join and so wanted to be a part of falling apart now that I've finally done the deed and got involved.

Ham radio need people like me. People who want to learn, look forward to getting their ticket. While I might not be waiting by the mailbox for a few months, I have been anxiously waiting on the internet. My desire to get on the air is no less than yours when you first got your ticket. My needs are not all that differant from yours when it comes to Ham Radio.

Remember the purpose of Ham Radio. It seems to me that many have lost that vision. The code-nocode debate is pointless when the FCC is under attack, we might lose our bands, we aren't getting our message across in D.C., and our bands aren't being policed.

If a no-coder is using bad operating practices, tell them. Your silence about it, or you complaint here on the net instead of on the air, does

nothing to help that ham learn the ropes. It is YOUR responsibility, both as the more experienced ham and as a ham operator in general, to make sure that the newbies learn the ropes and behave. I'm begging for help here, and all I get is complaints about how people like me mess up the bands.

Has everyone forgotten how it is to be a newbie? I guess so. And I thought Hams were friendly. So far, with the exception of three who have recently helped me, I have to say that is a myth.

RT Systems in Huntsville, I thank you for your help and encouragement.
WB4NCT, thanks for the encouragement and the great deal on the handheld.
KE4IOB, thanks for the words of encouragement.

The rest of you, get on the ball. From what I can see, Ham Radio is in trouble. It needs to be changed, we need to be a voice, and a supporter, in our communities.

Michael Malone
NEWBIE.

Does your propagation program "buzz" with unfamiliar terms...
FOT, dBuV, dBHz...when all you really want to know is the best
time, best band, and signal strength?

From the developers of CAPMan, comes "Wizard" for Windows. A
propagation program for busy hams. Hams that require information
without the buzzwords and the hassle of interpreting raw technical
data.

Unlike other programs, Wizard reports are smart and compact. All that
buzz stuff is eliminated.

FCC has posted mon.zip which indeed includes Gate 2 calls. Thanks! to the Friendly Communications Commission!

Here's the README.1105 file which accompanies the 250+K mon.zip:
----
5 November, 1996

Zipped files have been put on the net for Friday through Monday. These four files replace all zipped files downloaded from 10/23 to the present. They include vanity gate 2 callsigns.

If you don't do ftp too often here's how I got the file, more or less:
>ftp
>open www.fcc.gov
>login name (or something like that): anonymous
>password: (enter your e-mail address)
>cd pub/XFS_AlphaTest/amateur (this is caps sensitive)
>dir
>set binary
>get mon.zip
>quit

Hope this helps :-). Now I've gotta go look at mon.zip and see if I can find my new call in there somewhere, kinda like a kid opening a Christmas present.

Yes the 147.435 rptr can be herd all over the southland area, and you can
get a laugh out of it at the same time.

Subject: VE7TCP.AMPR.ORG Update

Well, I'm not dead (yet).

The ve7tcp.ampr.org server packed in the "new" motherboard. I now have the hard disks in hand and am assembling a new system (P100 based) that should be functional in a day or two.

There are some outside factors constraining how quickly I can get it back on the wire:

1) politics at the office re the Internet connection (the process is moving, just not as quickly as I would like)

2) a very heavy work schedule (we're going into pre-release beta for our main software package)

3) my own server lost a hard drive last week, taking me completely of the internet (and we didn't have working Usenet access at work until last Friday)

Due to #3 I've been quieter than I would have liked about this whole fiasco. Rest assured that I'm working on restoring the server ASAP!

I only input four gate 2 options because I'm more or less satisfied
with my current call (KI7FG) so there's no sweat if I don't get one of
my options....However, I've looked up all the calls on my list and
only TWO of them have been assigned to other people??? Two of them
come up "nothing found." They haven't been assigned to me but they
haven't been assigned to anyone else either.

What's the deal? Are they still running day one calls or was there a
snafu? What do you think I should do?

Arden,
still KI7FG (I think)

Hello and thanx for reading this message.

I have a mint condition Kenwood TM 733 2m/440 dual band
50/35 watts, with detachable face.

Included is the $100.00 separation kit, external duplexer, external
speaker, and mobile antena (dual band), new $15.00 packet data cable
(1200/9600 bps capable), original box, and manual.
I still have the registration card in the box.

I am asking $550.00 obo. I am a very motivated seller, and this would
make a great Christmas gift!

On chch.chat we have the question of whether 700 mW cell phones could cause trouble at fuel installations.

Does anyone know at what sort of power sparking might occur? I have vague recollections of being told of sparking between a shovel and a wire fence nearish to a broadcast transmitter.

Do you really think congress will totally dissolve the FCC? I don't think too many people would consider that very wise. Isn't there some international treaty that requires at least a minimal enforcement?

Yep, it would be real fun if everybody did whatever they pleased. Hey! We could all make lots of money selling our equipment to CB'ers, and we might as well, if there's no FCC.

No studying??? I would have to disagree with you on this point. When I first entered packet radio I studied the docs for many hours to get it right. I would also guess that it also takes a fair amount of learning to do EME and the others. So, unless you can support your statement above please do not attempt to state it as a fact.

Anybody experience the following with the Kenwood TS-690s (and I presume the 450S would be the same):

I connect my radio to my MFJ-1278 All Mode TNC via the ACC2 (13 pin) jack provided on the back of the rig. If I am using the TNC with the radio, everything seems to work peachy. If I leave the radio connected to the TNC and use the front panel Microphone connector for SSB, I get reports of distorted audio. If I disconnect the TNC Cable, audio reports are excellent. If anyone has come across this, AND A FIX, please let me in on it. I love the radio, but connecting and disconnecting the TNC all the time SUCKS! 73, Scott, N0EDV.

Special Event Station VG3W
Guelph ARC (Guelph, Ontario, Canada)

"In Flanders Fields the Poppies Blow" is the first line of the famous poem known worldwide by people of all ages.

From Nobember 4-11, 1996, the Guelph Amateur Radio Club will be operating Special Event Station VG3W from the McCrae House Museum, the birthplace of Col. John McCrae, M.D., the author of the poem.

This is the 81st Anniversary of Co. John McCrae, M.D., writing the poem in a bunker in Belgium during WW1. In Canada, Movember 11 is Remembrance Day, or Poppy Day. With the Special Event Station, the Guelph ARC is remembering the fallen and wounded of all wars who have made the world a better place to live.

VG3W will operate on all bands (2 meter packet, 6, 10, 15, 20, 40, 80) from 1500z-2200z.

K9DOG is a real person...lots of weirdos on 75 meters used to say they were K9DOG. One day a fellow decided to call this K9DOG on the phone after tracking him down through the callbook. He really exists, and never asked for the stupid call. Call him up and ask him if you don't believe me, but he might howl at you - but don't worry, his bark is worse than his bite.

Todd, KS2Z (Day 3'er...who DID get my dang W4TE call????)

The Alinco you got was probably modified for 9600 baud
packet and had its audio bypassed at the mic input in favor of
discriminator audio. That is one of the unfortunate
disadvantages...

I still need a schematic, the radio has performed flawlessly
RF wise for over 24 months straight, on 24 hours a day the
whole time, except for a week when I was on vacation.

Micky

-----BEGIN PGP SIGNED MESSAGE-----

*** The `Linux AX25 HOWTO' is posted automatically by the
*** Linux HOWTO coordinator, Greg Hankins <gregh@sunsite.unc.edu>. Please
*** direct any comments or questions about this HOWTO to the author,
*** Terry Dawson <terry@perf.no.itg.telecom.com.au>.

- --- BEGIN Linux AX25 HOWTO part 1/2 ---

Linux AX25-HOWTO, Amateur Radio.
Terry Dawson, VK2KTJ, terry@perf.no.itg.telecom.com.au
v1.1, 14 June 1996

The Linux Operating System is perhaps the only operating system in the
world that can boast native and standard support for the AX.25 packet
radio protocol utilised by Amateur Radio Operators worldwide. This
document aims to describe how to install and configure this support.

1. Introduction.

This document was originally an appendix to the HAM-HOWTO, but grew
too large to be reasonably managed in that fashion. This document
describes how to install and configure the native AX.25 and NetRom
support for Linux. A few typical configurations are described that
could be used as models to work from.

1.1. Changes from the previous version

Additions:
Baycom support - ye gads!

Corrections/Updates:
Included SLIP support in kernel config - oops.
2.0.0 kernel and ax25-tools update.
Updated net-tools to 1.32-alpha version.
Removed Jonathons `special' net-tools.
A bit of shuffling about to make more sense.
Updated the example configurations.
A minor copyright ooops.

1.2. Other related documentation.

There is a lot of related documentation. There are many documents that
relate to Linux networking in more general ways and I strongly
```

recommend you also read these as they will assist you in your efforts and provide you with stronger insight into other possible configurations.

They are:

The HAM-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/HAM-HOWTO.html>

the Net-2-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/NET-2-HOWTO.html>

the Ethernet-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/Ethernet-HOWTO.html>

the IPX-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/IPX-HOWTO.html>

and

the Firewall-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/Firewall-HOWTO.html>

2. Where to obtain new versions of this document.

The best place to obtain the latest version of this document is from a Linux Documentation Project archive. The Linux Documentation Project runs a Web Server and this document appears there as The AX25-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/AX25-HOWTO.html>. You can always contact me, but I pass new versions of the document directly to the LDP HOWTO coordinator, so if it isn't there then chances are I haven't finished it.

3. Linux and the AX.25 and NetRom Packet Radio Protocols.

The AX.25 protocol offers both connected and connectionless modes of operation, and is used either by itself for point-point links, or to carry other protocols such as TCP/IP and NetRom.

It is similar to X.25 level 2 in structure, with some extensions to make it more useful in the amateur radio environment.

The NetRom protocol is an attempt at a full network protocol and uses AX.25 at its lowest layer as a datalink protocol. It provides a network layer that is an adapted form of AX.25.

Alan Cox developed some early kernel based AX.25 software support for Linux. Jonathon Naylor <g4klx@g4klx.demon.co.uk> has taken up ongoing development of the code, has added NetRom support and is now the developer of the AX.25 related kernel code and utilities. DAMA support was developed by Joerg, DL1BKE. Finally Baycom support was added by Thomas Sailer, <sailer@ife.ee.ethz.ch>.

The Linux code supports KISS based TNC's (Terminal Node Controllers), the Ottawa PI card, the Gracilis PacketTwin card and other Z8530 SCC based cards with the generic SCC driver and both the Parallel and Serial port Baycom modems.

The User programs contain a simple PMS (Personal Message System), a beacon facility, a line mode connect program, `listen' an example of how to capture all AX.25 frames at raw interface level and programs to configure the NetRom protocol. Included also are an AX.25 server style program to handle and despatch incoming AX.25 connections and a NetRom daemon which does most of the hard work for NetRom support.

4. The AX.25/NetRom software components.

The AX.25 software is comprised of three components, the kernel source, the network configuration tools and the utility programs.

The version 1.3.xx Linux kernels include the AX.25, NetRom, Z8530 SCC, PI card and PacketTwin drivers by default. I recommend you obtain and use the version 1.3.xx kernel source.

These are three reasons I'm recommending you use the alpha version software even though most everyone else will recommend you don't use it:

- it makes the process of building and configuring the software a whole lot simpler. There are no patches to apply it is a simple matter of configuring and compiling a kernel with the appropriate options enabled.

- it is the most recent software and is most likely to provide the most satisfactory results.

- like all new software, it needs testing and bug reports. The more people that take the software and attempt to use it in their own configurations the more likely it will be that bugs are uncovered and the easier it will be to get the software debugged. Join the team, contribute bug reports and help everybody.

Be warned though, this software is alpha and may have problem that you wouldn't otherwise encounter. Please take all the usual precautions and be sure to keep a working kernel as backup when testing new kernels. It is wise to test a new kernel by booting from it from floppy before actually installing it with lilo, though I haven't bothered for about 90 kernels revisions so I'm fairly confident you can pretty safely run with alpha kernels.

4.1. Finding the kernel, tools and utility packages.

4.1.1. The kernel source:

The kernel source can be found in its usual place at:

ftp.funet.fi

/pub/Linux/PEOPLE/Linus/v2.0/

4.1.2. The network tools:

The latest alpha release of the standard Linux network tools support AX.25 and NetRom and can be found at:

ftp.inka.de

/pub/comp/Linux/networking/net-tools/net-tools-1.32-alpha.tar.gz

or:

ftp.linux.org.uk

/pub/linux/Networking/PROGRAMS/NetTools/net-tools-1.32-alpha.tar.gz

The latest ipfwadm package can be found at:

ftp.xos.nl

/pub/linux/ipfwadm/

4.1.3. The AX25 utilities:

The AX.25 utility programs can be found at:

sunsite.unc.edu

/pub/Linux/apps/ham/ax25-utils-2.0.0.tar.gz

or:

ftp.ucsd.edu

/hamradio/packet/tcpip/incoming/ax25-utils-2.0.0.tar.gz

5. Installing the AX.25/NetRom software.

To successfully install AX.25 support on your linux system you must configure and install an appropriate kernel and then install the AX.25 utilities.

5.1. Compiling the kernel.

If you are already familiar with the process of compiling the Linux Kernel then you can skip this section, just be sure to select the appropriate options when compiling the kernel. If you are not, then read on.

The normal place for the kernel source to be unpacked to is the /usr/src directory into a subdirectory called linux. To do this you should be logged in as root and execute a series of commands similar to the following:

```
# mv linux linux.old
# cd /usr/src
# gzip -dc linux-2.0.0.tar.gz | tar xvofp -
# cd linux
```

After you have unpacked the kernel source into place you need to run the configuration script and choose the options that suit your hardware configuration and the options that you wish built into your kernel. You do this by using the command:

```
# make config
```

You might also try:

```
# make menuconfig
```

if you prefer a full screen menu based method. I'm going to describe the original method, but you use whichever you are most comfortable with.

In either case you will be offered a range of options at which you must answer `Y' or `N'. (Note you may also answer `M' if you are using modules. For the sake of simplicity I will assume you are not, please make appropriate modifications if you are).

The options most relevant to an AX.25 configuration are:

```
Networking support (CONFIG_NET) [Y/n/?] Y
Loopback device support (CONFIG_BLK_DEV_LOOP) [N/y/m/?] Y
Network firewalls (CONFIG_FIREWALL) [N/y/?]
TCP/IP networking (CONFIG_INET) [Y/n/?] Y

Gracilis PackeTwin support (CONFIG_PT) [N/y/?] (NEW)
Standard/generic serial support (CONFIG_SERIAL) [Y/n/?]
```

The options I have flagged with a `Y' are those that you must must answer `Y' to. The rest are dependent on what hardware you have and what options you want to include. Some of these options are described in more detail later on, so if you don't know what you want yet, then read ahead and come back to this step later.

After you have completed the kernel configuration you should be able to cleanly compile your new kernel:

```
# make dep
# make clean
# make zImage
```

Make sure you move your arch/i386/boot/zImage file wherever you want it and then run lilo to ensure that you actually boot from it.

5.2. The network configuration tools.

After you have compiled the kernel you should compile the new network configuration tools. These tools allow you to modify the configuration of network devices and to add routes to the routing table.

The new alpha release of the standard net-tools package includes support for AX.25 and NetRom support. I've tested this and it seems to work well for me.
5.2.1. Building the standard net-tools release.

Don't forget to read the Release file and follow any instructions there. The steps I used to compile the tools were:

```
# cd /usr/src
# tar xvfz net-tools-1.32-alpha.tar.gz
# cd net-tools-1.32-alpha
# make config
```

At this stage you will be presented with a series of configuration questions, similar to the kernel configuration questions. Be sure to include support for all of the protocols and network devices types that you intend to use. If you do not know how to answer a particular question then answer `Y'.

The tools compiled cleanly against a 2.0.0 kernel without error.

When the compilation is complete, you should need only use the:

```
# make install
```

command to install the programs in their proper place.

If you wish to use the IP firewall facilities then you will need the latest firewall administration tool ipfwadm. This tool replaces the older ipfw tool which will not work with new kernels.

I compiled the ipfwadm utility with the following commands:

```
# cd /usr/src
# tar xvfz ipfwadm-2.0beta2.tar.gz
# cd ipfwadm-2.0beta2
# make install
# cp ipfwadm.8 /usr/man/man8
# cp ipfw.4 /usr/man/man4
```

5.3. The AX.25 user programs.

After you have successfully compiled and booted your new kernel, you need to compile the user programs. To compile and install the user programs you should use a series of commands similar to the following:

```
# cd /usr/local
# gzip -dc ax25-utils-2.0.0.tar.gz | tar xvvof -
# cd ax25-utils-2.0
# make install
```

The files will be installed under the /usr/local directory by default
in subdirectories: bin, sbin, etc and man.

If you get messages something like:

```
gcc -Wall -Wstrict-prototypes -O2 -I../lib -c call.c
call.c: In function `statline':
call.c:268: warning: implicit declaration of function `attron'
call.c:268: `A_REVERSE' undeclared (first use this function)
call.c:268: (Each undeclared identifier is reported only once
call.c:268: for each function it appears in.)
```

then you should read the README.ncurses file in the top level
directory. You can do as Jonathon suggests, or you can try replacing:

```
#include <curses.h>
```

with:

```
#include <ncurses/curses.h>
```

in the:

```
call/call.c
call/menu.c
```

files.

6. Configuring a RAW AX.25 connected mode interface.

The first stage to configuration of an AX.25 interface is to configure
it to work as a `vanilla' AX.25 interface with no TCP/IP. The
following configuration will get you to the point of being able to
make AX.25 calls from your Linux machine to other AX.25 nodes.

The AX.25 software has been designed to work with a TNC in kiss mode
or with other cards such as the Ottawa PI2 card, PacketTwin and other
SCC cards via special drivers that emulate a kiss tnc.

For real KISS TNC's there are two steps to complete in order to create
an AX.25 port ready to use to make outgoing calls. For other types of
hardware you need only complete the first step.

6.1. Creating the /usr/local/etc/axports file.

The AX.25 ports have a configuration file that is read by many
programs that want to find information about an AX.25 port. This file
is called the:

/usr/local/etc/axports

file. The format of the file is as follows:

```
portname callsign baudrate paclen window description
```

where:

portname
is a text name that you will refer to the port by.

callsign
is the AX.25 callsign you want to assign to the port.

baudrate
is the speed at which you wish the port to communicate with your
TNC.

paclen
is the maximum packet length you want to configure the port to
use for AX.25 connected mode connections.

window
is the AX.25 window (K) parameter. This is the same as the
MAXFRAME setting of many tnc's.

description
is a textual description of the port.

In my case, mine looks like:

radio VK2KTJ-0 4800 256 2 144.800 MHz

6.2. Creating the AX.25 device

If you are using an SCC card like the PI2 or PacketTwin then you do
not need to create the network device, as the kernel driver will
automatically do this for you. If you are using a KISS TNC then you
will need to create the AX.25 interface as it will not already exist.
Creating an AX.25 port is very similar to creating a slip device.

You will need to have the TNC preconfigured and connected to your
serial port. You can use a communications program like minicom or
seyon to configure the TNC into kiss mode if you wish.

You use the axattach program in much the same way as you would use the
slattach program (refer to the NET-2-HOWTO for more information on
slattach and the other network software for Linux). For example:

/usr/local/sbin/axattach /dev/ttyS0 radio

would configure your /dev/ttyS1 serial device to be a kiss interface
configured as per the details for the line beginning with the portname
"radio" in the /usr/local/etc/axports file.

All this step has done is to actually activate the device in the
kernel, you need to run other programs before you an actually make use
of the port.

6.2.1. Setting the callsign for SCC cards.

If you are using a PI or PacketTwin card then you should use the
axparms -setcall command to change the callsign of the appropriate
port to that which you intend to use. Refer to the PI/PacketTwin

section for the names of the network devices to use.

6.2.2. Testing the interface.

You now should be able to make outgoing AX.25 connections. To test AX.25 connected mode you could use the call program as demonstrated:

/usr/local/bin/call radio VK2DAY via VK2SUT

Note: you must tell call which AX.25 port you wish to make the call on, as the same AX.25 node might be reachable on any of the ports you have configured.

The call program is a linemode terminal program for making AX.25 calls. It recognises lines that start with `~' as command lines. The `~.' command will close the connection.

Please refer to the man pages in /usr/local/man and the README file in ax25-utils-2.0.0 distribution for more information.

7. Configuring an AX.25 interface for tcp/ip.

It is very simple to configure an AX.25 port to carry tcp/ip. Jonathon has modified the axattach command so that you can include the IP address that you want the interface to be configured with on the command line. For example, to modify the example presented earlier, I could use the command:

```
# /usr/local/sbin/axattach -i 44.136.8.5 -m 512 /dev/ttyS0 radio
# /sbin/route add -net 44.136.8.0 sl0
# /sbin/route add default sl0
```

to create the AX.25 interface with an IP address of 44.136.8.6 and an MTU of 512 bytes. You should still use the ifconfig to configure the other parameters if necessary.

You do not need to do it this way, you can of course just use the ifconfig program to configure the ip address and netmask details for the port and add a route via the port, just as you would for any other tcp/ip interface.

```
# /sbin/ifconfig sl0 44.136.8.5
# /sbin/ifconfig sl0 netmask 255.255.255.0
# /sbin/ifconfig sl0 broadcast 44.136.8.255
# /sbin/ifconfig sl0 arp mtu 256 up
# /sbin/route add -net 44.136.8.0 sl0
# /sbin/route add default sl0
```

The commands listed above are typical of the sort of configuration many of you would be familiar with if you have used NOS or any of its derivatives or any other tcp/ip software. Note that the default route might not be required in your configuration if you have some other network device configured.

To test it out, try a ping or a telnet to a local host.

```
# ping -i 5 44.136.8.58
```

Note the use of the `-i 5' arguments to ping to tell it to send pings every 5 seconds instead of its default of 1 second.

8. Configuring an AX.25 interface for NetRom.

To configure NetRom on an AX.25 interface you must configure two files.

8.1. Configuring /usr/local/etc/nrports

The first is the /usr/local/etc/nrports file. This file describes the NetRom port in much the same way as the /usr/local/etc/axports file describes the AX.25 ports.

This file is formatted as follows:

```
name callsign alias paclen description
```

Where:

name
is the text name that you wish to refer to the port by.

callsign
is the callsign that the NetRom traffic from this port will use.
alias
is the NetRom alias this port will have assigned to it.

paclen
is the maximum size of NetRom frames transmitted by this port.

description
is a free text description of the port.

An example would look something like the following:

```
netrom VK2KTJ-1 LINUX 235 Linux Switch Port
```

Note that the ports are referred to by name by programs such as call.

8.2. Configuring /usr/local/etc/nrbroadcast

The second file is the /usr/local/etc/nrbroadcast file.

This file is formatted as follows:

```
axport min_obs def_qual worst_qual verbose
```

Where:

axport
is the port name obtained from the /usr/local/etc/axports file.
If you do not have an entry in /usr/local/etc/nrbroadcasts for a port then this means that no NetRom routing will occur and any received NetRom broadcasts will be ignored for that port.

min_obs
is the minimum obselesence value for the port.

def_qual
is the default quality for the port.

worst_qual
is the worst quality value for the port, any routes under this
quality will be ignored.

verbose
is a flag determining whether full NetRom routing broadcasts
will occur from this port or only a routing broadcast
advertising the node itself.

An example would look something like the following:

radio 1 200 10 1

8.3. Creating the NetRom device

When you have the two configuration files completed you must create
the NetRom device in much the same way as you did for the AX.25
devices. This time you use the nrattach command:

nrattach netrom

This command would start the NetRom device (nr0) named netrom
configured with the details specified in the /usr/local/etc/nrports
file.

8.4. Starting the NetRom daemon

The NetRom daemon manages the NetRom routing tables and generates the
NetRom routing broadcasts. You start NetRom with the command:

/usr/local/sbin/netromd

You should soon see the /proc/net/nr_neigh file filling up with
information about your NetRom neighbours.

Remember to put the /usr/local/sbin/netromd command in your rc files
so that it is started automatically each time you reboot.

9. Configuring IP on a NetRom interface.

Configuring a NetRom interface for tcp/ip is almost identical to
configuring an AX.25 interface for tcp/ip.

Again you can either specify the ip address and mtu on the nrattach
command line, or use the ifconfig and route commands, but you need to
manually add arp entries for hosts you wish to route to because there
is no mechanism available for your machine to learn what NetRom
address it should use to reach a particular IP host.

So, to create an nr0 device with an IP address of 44.136.8.5 and an
mtu of 512 and configured with the details from the

/usr/local/etc/nrports file for a NetRom port named netrom you would use:

```
# /usr/local/sbin/nrattach -i 44.136.8.5 -m 512 netrom
# route add 44.136.8.5 nr0
```

or you could use something like the following commands manually:

```
# ifconfig nr0 44.136.8.5 hw netrom VK2KTJ-1
# route add 44.136.8.5 nr0
```

Then for each IP host you wish to reach via NetRom you need to set route and arp entries. To reach a destination host with an IP address of 44.136.80.4 at NetRom address BBS:VK3BBS via a NetRom neighbour with callsign VK2SUT-0 you would use commands as follows:

```
# route add 44.136.80.4 nr0
# arp -t netrom -s 44.136.80.4 vk2sut-0
# nrparms -nodes vk3bbs + BBS 120 6 sl0 vk2sut-0
```

The `120' and `6' arguments to the nrparms command are the NetRom quality and obsolescence count values for the route.

10. Configuring an Ethernet device for AX.25 ala BPQ

Linux support BPQ Ethernet compatibility. This enables you to run the AX.25 protocol over your Ethernet LAN and to interwork your linux machine with other BPQ machines on the LAN.

Configuration is quite straightforward. You firstly must have configured a standard Ethernet device. This means you will have compiled your kernel to support your Ethernet card, and executed configuration commands similar to the following:

```
# ifconfig eth0 44.136.8.5 netmask 255.255.255.248 up
# ifconfig eth0 broadcast 44.136.8.103
# route add -net 44.136.8.96 netmask 255.255.255.248 eth0
```

To configure the BPQ support you need to associate an AX.25 callsign with your Ethernet hardware address. You should use the following:

```
# axparms -dev eth0 vk2ktj-9
```

This says that AX.25 callsign vk2ktj-9 is associated with the eth0 device.

BPQ Ethernet normally uses a multicast address. The Linux implementation does not, and instead it uses the normal Ethernet broadcast address. The NET.CFG file for the BPQ ODI driver should therefore look similar to this:

```
LINK SUPPORT

MAX STACKS 1
MAX BOARDS 1
```

```
LINK DRIVER E2000 ; or other MLID to suit your card

INT 10 ;
PORT 300 ; to suit your card

FRAME ETHERNET_II

PROTOCOL BPQ 8FF ETHERNET_II ; required for BPQ - can change PID

BPQPARMS ; optional - only needed if you want
; to override the default target addr

ETH_ADDR FF:FF:FF:FF:FF:FF ; Target address
```

11. Ottawa PI/PI2 card driver and Gracilis PacketTwin driver.

The Ottawa PI and the Gracilis PacketTwin are Z8530 SCC based card for IBM PC type machines that are in common usage by Amateur Radio operators worldwide. The PI card supports a high speed half duplex (single DMA channel) port, and a low speed (<9k6bps interrupt driven) half duplex port. The PI2 is a new version of the card that supports an on board radio modem and improved hardware design. The PacketTwin card supports two high speed port and is capable of accepting on board modems.

The PI card driver was written by David Perry, <dp@hydra.carleton.edu> The PacketTwin card driver was written by Craig Small VK2XLZ, <csmall@triode.apana.org.au>. Both drivers are a standard feature of the 1.3.xx kernel.

Please refer to the AX.25 section above for details on how to configure the kernel to include the PI card or the PacketTwin card drivers.

Once you have the appropriate driver configured into your kernel then you should reboot and when you do, you should see mention of the PI or PacketTwin card driver in the messages that appear on the screen while the kernel is booting. The drivers test each of the I/O port addresses that the card might be configured for and reports any that it finds. You should then look at the /proc/net/dev file and you should see reference to devices called pi0a and pi0b or pt0a and pt0b for the PI and PacketTwin cards respectively.

If the devices don't appear then recheck that you have configured and compiled your kernel correctly and that you are in fact actually running your new kernel. If you still don't then this suggests that your PI or PacketTwin card was not detected by the kernel while it booted and may indicate that you have some sort of hardware conflicting with your PI/PT card that prevented it being detected.

If all of the above went as planned then you will need to configure your PI/PT card with an AX.25 address and for IP. The configuration of the PI/PT cards is virtually identical to that of any other IP interface. Something like the following should work ok for you:

```
# /usr/local/sbin/axparms -setcall pi0a VK2KTJ-2
# /sbin/ifconfig pi0a 44.136.8.5
# /sbin/ifconfig pi0a netmask 255.255.255.0
# /sbin/ifconfig pi0a broadcast 44.136.8.255
# /sbin/ifconfig pi0a arp mtu 256 up
# /sbin/route add -net 44.136.8.0 pi0a
# /sbin/route add default pi0a
```

Note that pi0a refers to the `a' port on the first PI card found, and that pi0b would therefore refer to the `b' port on the first PI card found. pt0a would therefore be the first port on the first PacketTwin card detected.

Note also the use of the axparms -setcall command to set the AX.25 callsign of the port.

As usual, when this has been done you can test the interface with the ping or telnet command to ensure it is working.

12. Z8530 SCC Kiss Emulation

Joerg Reuter, DL1BKE has developed generic support for Z8530 SCC based cards. His driver is configurable to support a range of different types of cards and present an interface that looks like a KISS TNC so you can treat it as though it were a KISS TNC.

12.1. Obtaining and building the configuration tool package.

The kernel driver is included in the standard kernel distribution, but there are a suite of configuration tools that you will need to obtain as well.

To compile the kernel support you must be sure to answer `Y' to: `Z8530 SCC kiss emulation driver for AX.25' when asked during a kernel `make config'.

You can obtain the configuration tools package from:

ftp.ucsd.edu

/hamradio/packet/tcpip/incoming/z8530drv-2.0.dl1bke.real.tar.gz

The following command were what I used to compile and install the package for kernel version 1.3.93:

```
# cd /usr/src
# gzip -dc z8530drv-2.0.dl1bke.real.tar.gz | tar xvpofz -
# cd z8530drv
# rm gencfg sccinit sccstat
# make dep
# make utils
# make install
```

Note: I've not followed the instructions included because the version of driver in the 2.0.0 kernel is actually newer than that included in the package and the normal installation process would have overwritten

the new kernel source with the older version.

After the above is complete you should have three new programs installed in your /sbin directory: gencfg, sccinit and sccstat. It is these programs that you will use to configure the driver for your card.

You will also have a group of new special device files created in your /dev called scc0 .. scc7. These will be used later and will be the `KISS' devices you will end up using.

12.2. Configuring the driver for your card.

The z8530 SCC driver has been designed to be as flexible as possible so as to support as many different types of cards as possible. With this flexibility has come some cost in configuration.

There is more comprehensive documentation in the package and you should read this if you have any problems. You should particularly look at doc/scc_eng.doc or doc/scc_ger.doc for more detailed information. I've paraphrased the important details, but as a result there is a lot of lower level detail that I have not included.

The main configuration file is read by the sccinit program and is called /etc/z8530drv.rc. This file is broken into two main stages: Configuration of the hardware parameters and channel configuration. After you have configured this file you need only add:

sccinit

into the rc file that configures your network and the driver will be initialised according to the contents of the configuration file. You must do this before you attempt to use the driver.

12.2.1. Configuration of the hardware parameters.

The first section is broken into stanzas, each stanza representing an 8530 chip. Each stanza is a list of keywords with arguments. You may specify up to four SCC chips in this file by default. The #define MAXSCC 4 in scc.c can be increased if you require support for more.

The allowable keywords and arguments are:

chip
the chip keyword is used to separate stanzas. It will take anything as an argument. The arguments are not used.

data_a
this keyword is used to specify the address of the data port for the z8530 channel `A'. The argument is a hexadecimal number e.g. 0x300

ctrl_a
this keyword is used to specify the address of the control port for the z8530 channel `A'. The arguments is a hexadecimal number

e.g. 0x304

data_b
this keyword is used to specify the address of the data port for the z8530 channel `B'. The argument is a hexadecimal number e.g. 0x301

ctrl_b
this keyword is used to specify the address of the control port for the z8530 channel `B'. The arguments is a hexadecimal number e.g. 0x305

irq
this keyword is used to specify the IRQ used by the 8530 SCC described in this stanza. The argument is an integer e.g. 5

pclock
this keyword is used to specify the frequency of the clock at the PCLK pin of the 8530. The argument is an integer frequency in Hz which defaults to 4915200 if the keyword is not supplied.

board
the type of board supporting this 8530 SCC. The argument is a character string. The allowed values are:

PA0HZP
the PA0HZP SCC Card

EAGLE
the Eagle card

PC100
the DRSI PC100 SCC card

PRIMUS
the PRIMUS-PC (DG9BL) card

BAYCOM
BayCom (U)SCC card

escc
this keyword is optional and is used to enable support for the Extended SCC chips (ESCC) such as the 8580, 85180, or the 85280. The argument is a character string with allowed values of `yes' or `no'. The default is `no'.

vector
this keyword is optional and specifies the address of the vector latch (also known as "intack port") for PA0HZP cards. There can be only one vector latch for all chips. The default is 0.

special
this keyword is optional and specifies the address of the special function register on several cards. The default is 0.

```
option
this keyword is optional and defaults to 0.

Some example configurations for the more popular cards are as follows:

BayCom USCC

chip 1
data_a 0x300
ctrl_a 0x304
data_b 0x301
ctrl_b 0x305
irq 5
board BAYCOM
#
# SCC chip 2
#
chip 2
data_a 0x302
ctrl_a 0x306
data_b 0x303
ctrl_b 0x307
board BAYCOM

PA0HZP SCC card

chip 1
data_a 0x153
data_b 0x151
ctrl_a 0x152
ctrl_b 0x150
irq 9
pclock 4915200
board PA0HZP
vector 0x168
escc no
#
#
#
chip 2
data_a 0x157
data_b 0x155
ctrl_a 0x156
ctrl_b 0x154
irq 9
pclock 4915200
board PA0HZP
vector 0x168
escc no

DRSI SCC card
```

```
chip 1
data_a 0x303
data_b 0x301
ctrl_a 0x302
ctrl_b 0x300
irq 7
pclock 4915200
board DRSI
escc no
```

If you already have a working configuration for your card under NOS, then you can use the gencfg command to convert the PE1CHL NOS driver commands into a form suitable for use in the z8530 driver configuration file.

To use gencfg you simply invoke it with the same parameters as you used for the PE1CHL driver in NET/NOS. For example:

```
# gencfg 2 0x150 4 2 0 1 0x168 9 4915200
```

will generate a skeleton configuration for the OptoSCC card.

12.2.2. Channel Configuration

The Channel Configuration section is where you specify all of the other parameters associated with the port you are configuring. Again this section is broken into stanzas. One stanza represents one logical port, and therefore there would be two of these for each one of the hardware parameters stanzas as each 8530 SCC supports two ports.

These keywords and arguments are also written to the /etc/z8530drv.rc file and must appear after the hardware parameters section.

Sequence is very important in this section, but if you stick with the suggested sequence it should work ok. The keywords and arguments are:

device
this keyword must be the first line of a port definition and specifies the name of the special device file that the rest of the configuration applies to. e.g. /dev/scc0

speed
this keyword specifies the speed in bits per second of the interface. The argument is an integer: e.g. 1200

clock
this keyword specifies where the clock for the data will be sourced. Allowable values are:

dpll
normal halfduplex operation

external
MODEM supplies its own Rx/Tx clock

divider
use fullduplex divider if installed.

mode
this keyword specifies the data coding to be used. Allowable
arguments are: nrzi or nrz

rxbuffers
this keyword specifies the number of receive buffers to allocate
memory for. The argument is an integer, e.g. 8.

txbuffers
this keyword specifies the number of transmit buffers to
allocate memory for. The argument is an integer, e.g. 8.

bufsize
this keyword specifies the size of the receive and transmit
buffers. The arguments is in bytes and represents the total
length of the frame, so it must also take into account the AX.25
headers and not just the length of the data field. This keyword
is optional and default to 384

txdelay
the KISS transmit delay value, the argument is an integer in mS.

persist
the KISS persist value, the argument is an integer.

slot
the KISS slot time value, the argument is an integer in mS.

tail
the KISS transmit tail value, the argument is an integer in mS.

fulldup
the KISS full duplex flag, the argument is an integer. 1==Full
Duplex, 0==Half Duplex.

wait
the KISS wait value, the argument is an integer in mS.

min
the KISS min value, the argument is an integer in S.

maxkey
the KISS maximum keyup time, the argument is an integer in S.

idle
the KISS idle timer value, the argument is an integer in S.

maxdef
the KISS maxdef value, the argument is an integer.

group
the KISS group value, the argument is an integer.

txoff
the KISS txoff value, the argument is an integer in mS.

softdcd
the KISS softdcd value, the argument is an integer.

slip
the KISS slip flag, the argument is an integer.

12.3. Using the driver.

To use the driver you simply treat the /dev/scc* devices just as you would a serial tty device with a KISS TNC connected to it. For example, to configure Linux Kernel networking to use your SCC card you could use something like:

axattach -s 4800 /dev/scc0 VK2KTJ

You can also use NOS to attach to it in precisely the same way. From JNOS for example you would use something like:
attach asy scc0 0 ax25 scc0 256 256 4800

12.4. The sccstat and sccparam tools.

To assist in the diagnosis of problems you can use the sccstat program to display the current configuration of an SCC device. To use it try:

sccstat /dev/scc0

you will displayed a very large amount of information relating to the configuration and health of the /dev/scc0 SCC port.

The sccparam command allows you to change or modify a configuration after you have booted. Its syntax is very similar to the NOS param command, so to set the txtail setting of a device to 100mS you would use:

sccparam /dev/scc0 txtail 0x8

13. Configuring an interface for a Baycom modem.

Thomas Sailer, <sailer@ife.ee.ethz.ch>, despite the popularly held belief that it would not work very well, has developed Linux support for Baycom modems. His driver supports the Ser12 serial port, Par96 and the enhanced Par97 parallel port modems.

When the driver is running it follows the standard of looking like a KISS interface, so you treat it in much the same way as you would the PI card, PacketTwin or SCC driver ports.

13.1. Compiling the kernel

The driver is only available as a module, so you must have compiled module support into your kernel, and also selected the appopriate options to support the Baycom driver during the make config stage when compiling your kernel.

The relevant options that you must answer `Y' for are:

Radio network interfaces (CONFIG_NET_RADIO) [N/y/?]
BAYCOM ser12 and par96 kiss emulation driver for AX.25 (CONFIG_BAYCOM) [N/y/m/?]

13.2. Creating the /dev device files.

The Baycom driver uses special device files in the /dev directory.
You need to create these manually. The following commands should work
ok for you:

mknod /dev/bc0 c 60 0
mknod /dev/bc1 c 60 1
mknod /dev/bc2 c 60 2
mknod /dev/bc3 c 60 3

You will use these later.

13.3. Loading the module.

When the kernel compilation is complete and you have installed the
module baycom.o wherever you normally keep your modules
(conventionally they are stored in /lib/modules/2.0.0/), you must
start the module. The module takes configuration paramters from the
insmod command line, so you must start it manually from an rc file or
if you use the kerneld program you must configure it with the relevant
paramters so that it supplies them when it loads the module.

If you use kerneld you will need to add the following line to your
/etc/conf.modules file:

alias char-major-60 baycom

There are four main items to specify when loading the module, they
are:

modem
the baycom modem type you are configuring it for.

1. Ser12 type modem.

2. Par96 or Par97 type modem.

iobase
the i/o address of the serial or parallel port you will use.

0x3f8
COM1:

0x2f8
COM2:

0x378
LPT1:

0x278
LPT2:

irq
the Interrupt Request (IRQ) line your port will use.

4 COM1:

3 COM2:

7 LPT1:

5 LPT2:

options
some baycom specific options.

0 use hardware generated DCD signal.

1 use software DCD signal.

13.4. A small trap to be aware of.

Because the Baycom driver uses the serial and parallel ports of your machines, and because it is a low level driver for these, it competes with the existing serial and parallel drivers in the kernel. There are some ways of working around this problem. The first way is to make sure that you load the Baycom module first so that it takes the hardware it needs before the serial or parallel device driver modules load and search for their own. With the serial driver you have the luxury of being able to disable it for a single port using the setserial command, this will be demonstrated in the examples. If you are using the parallel port modems then beware of the lp.o Line Printer and plip.o Parallel Line IP modules.

13.5. Some example configurations.

These examples are for the two most common configurations.

Disable the serial driver for COM1: then configure the Baycom driver for a Ser12 serial port modem on COM1: with the software DCD option enabled:

```
# setserial /dev/ttyS0 uart none
# insmod baycom modem=1 iobase=0x3f8 irq=4 options=1
```

Par96 parallel port type modem on LPT1: using hardware DCD detection:

```
# insmod baycom modem=2 iobase=0x378 irq=7 options=0
```

The first device created is /dev/bc0, the second is /dev/bc1 etc.

13.6. Configuring multiple devices.

Using the insmod program and its command line arguments you can only configure one Baycom modem. There is a setbaycom utility which I have not yet located that will allow you to configure others. If you happen to find it please let me know where it is kept so that I can include details for it here.

13.7. Actually using the devices.

This device driver when loaded looks like a serial tty driver with a KISS TNC attached. This means that configuration of the AX.25 software for this driver is identical to the configuration for a KISS TNC presented earlier. You need to use the axattach program and add the port to your /usr/local/etc/axports file. The only difference is that you would use the device /dev/bc0 instead of /dev/ttyS0.

14. Configuring ax25d to accept incoming AX.25/Netrom connections.

Linux is a powerful operating system and offers a great deal of flexibility in how it is configured. With this flexibility comes a cost in configuring it to do what you want. When configuring your Linux machine to accept incoming AX.25 or NetRom connections there are a number of questions you need to ask yourself. The most important of which is: "What do I want users to see when they connect?". As detailed in the HAM-HOWTO there are BBS systems that are being developed that you might want users to see when they connect, alternatively you might want to give users a login prompt so that they can make use of a shell account, or you might even have written your own program, such as a customised database or a game, that you want people to connect to. Whatever you choose, you must tell the AX.25 software about this so that it knows what software to run when it accepts an incoming AX.25 connection.

14.1. Creating the /usr/local/etc/ax25d.conf file.

This file is the configuration file for the ax25d AX.25 daemon which handles incoming AX.25 and NetRom connections.

The file is a little cryptic looking at first, but you'll soon discover it is very simple in practice, with a small trap for you to be wary of.

The format of the ax25d.conf file is as follows:

```
# This is a comment and is ignored by the ax25d program.
[<interface_call>]
<peer1> window T1 T2 T3 N2 <mode> <uid> <cmd> <cmd-name> <arguments>
<peer2> window T1 T2 T3 N2 <mode> <uid> <cmd> <cmd-name> <arguments>
defaults window T1 T2 T3 N2 <mode> <uid> <cmd> <cmd-name> <arguments>
<peer3> window T1 T2 T3 N2 <mode> <uid> <cmd> <cmd-name> <arguments>
default window T1 T2 T3 N2 <mode> <uid> <cmd> <cmd-name> <arguments>
```

Where:

at the start of a line marks a comment and is completely ignored by the ax25d program.

<interface_call>
is the AX.25 callsign of the AX.25 or NetRom interface that this particular paragraph is for.

<peer>
is the callsign of the peer node that this particular
configuration applies to. If you don't specify an SSID here then
any SSID will match.

window
is the AX.25 Window parameter (K) or MAXFRAME parameter for this
configuration.

T1 is the Frame retransmission (T1) timer in half second units.

T2 is the amount of time the AX.25 software will wait for another
incoming frame before preparing a response in 1 second units.

T3 is the amount of time of inactivity before the AX.25 software
will disconnect the session in 1 second units.

N2 is the number of consecutive retransmissions that will occur
before the connection is closed.

<mode>
provides a mechanism for determining certain types of general
permissions. The modes are enabled or disabled by setting or
resetting bits in an 8 bit map. You set that map by setting
<mode> to the sum of the following values:

1 Setup utmp, and run on a ptty (planned).

2 UNUSED.

4 UNUSED.

8 UNUSED.

16 UNUSED.

32 UNUSED.

64 Disallow digipeated uplinks, only allow direct connections.

128
Lockout, Barred, immediate disconnect.

<uid>
is the userid that the program to be run to support the
connection should be run as.

<cmd>
is the full pathname of the command to be run, with no arguments
specified.

<cmd-name>
is the text that should appear in a ps as the command name
running (normally the same as <cmd> except without the directory
path information.

<arguments>
are the command line argument to be passed to the <:cmd> when it is run. You pass useful information into these arguments by use of the following tokens:

%U AX.25 callsign of the connected party without the SSID, in uppercase.

%u AX.25 callsign of the connected party without the SSID, in lowercase.

%S AX.25 callsign of the connected party with the SSID, in uppercase.

%s AX.25 callsign of the connected party with the SSID, in lowercase.

You need one section in the above format for each AX.25 or NetRom interface you want to accept incoming AX.25 or NetRom connections on.

There are two special lines in the paragraph, one starts with the string `defaults' and other starts with the string `default' (yes there is a difference). These lines serve special functions.

The `default' lines purpose should be obvious, this line acts as a catch-all, so that any incoming connection on the <interface_call> interface that doesn't have a specific rule will match the `default' rule. If you don't have a `default' rule, then any connections not matching any specific rule will be disconnected immediately without notice.

The `defaults' line is a little more subtle, and here is the trap I mentioned earlier. In any of the fields for any definition for a peer you can use the `*' character to say `use the default value'. The `default' line is what sets those default values. The kernel software itself has some defaults which will be used if you don't specify any. The trap is that the these defaults apply only to those rules below the `default' line not to those above. You may have more than one `default' rule per interface definition, and in this way you may create groups of default configurations.

14.2. A simple example ax25d.conf file.

Ok, an illustrative example:

```
# ax25d.conf for VK2KTJ - 21/11/95
# This configuration uses the AX.25 port defined earlier.
[VK2KTJ-1]
NOCALL * * * * * 0 guest /usr/games/fortune
defaults 1 10 * * * 0 root /usr/local/sbin/axspawn axspawn %u +
VK2XLZ-1 * * * * * * * * *
VK2DAY-1 * * * * * * * * *
default 1 10 5 100 5 0 root /usr/local/bin/pms pms -a -o vk2ktj
#
```

This example says that anybody connecting to the interface on my machine with the callsign VK2KTJ-1 will have the following rules applied:

Anyone whose callsign is set to `NOCALL' should use the kernel default parameters and have the fortune program run as guest for them.

The defaults line changes two parameters from the kernel defaults (Window and T1) and will run the /usr/local/sbin/axspawn program for them. Any copies of /usr/local/sbin/axspawn run this way will appear as axspawn in a ps listing for convenience. The next two lines definitions for two stations who will receive those permissions.

The last line in the paragraph is the `catch all' definition that everybody else will get (including VK2XLZ and VK2DAY using any other SSID other than -1). This definition sets all of the parameters implicitly and will cause the pms program to be run with a command line argument indicating that it is being run for an AX.25 connection (assuming VK2KTJ-1 to be an AX.25 interface) and that the owner callsign is VK2KTJ. (See the `Configuring the PMS' section below for more details).

If you wanted to define rules for another interface, a NetRom interface for example, then you would add another paragraph coded in the same way with rules and callsign appropriate to it.

This example is a contrived one but I think it illustrates clearly the important features of the syntax of the configuration file. Jonathon includes a much longer and more detailed example in the ax25-utils package that you should look at if you need more information.

14.3. Starting ax25d

When you have the two configuration files completed you start ax25d with the command:

/usr/local/sbin/ax25d

300. Linux HAM HOWTO (part 2/2)

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-06 00:00:00 UTC
From: Terry Dawson <terry@perf.no.itg.telecom.com.au>
Message-ID: <HAM-HOWTO.2-7807.847340570@cc.gatech.edu>
Source record: 213366
Cross-posted to: comp.os.linux.answers,rec.radio.amateur.misc,aus.radio.amateur.digital

Archive-name: linux/howto/ham/part2
Last-modified: 13 Oct 96

-----BEGIN PGP SIGNED MESSAGE-----

*** The `Linux HAM HOWTO' is posted automatically by the
*** Linux HOWTO coordinator, Greg Hankins <gregh@sunsite.unc.edu>. Please
*** direct any comments or questions about this HOWTO to the author,
*** Terry Dawson <terry@perf.no.itg.telecom.com.au>.

- --- BEGIN Linux HAM HOWTO part 2/2 ---

Author
Thomas Nau, Thomas.Nau@rz.uni-ulm.de

Description
An X11 based interactive printed circuit board design tool.

Status
Vers 1.4.1, stable.

System requirements
X11 Windowing system and a recent flex program.

Detail
The pcb package comes with good instructions on how to compile
and install the software. I compiled it without error under
X11R6. It comes with package layouts for a range of popular
components and the example layout nicely demonstrates the
capabilities of the package.

Where and How to obtain it.
You can obtain the pcb package from: sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/circuits/pcb-1.4.1.tar.gz>
or from: ftp.uni-ulm.de <ftp://ftp.uni-ulm.de/pub/pcb/current>

Licensing/Copyright
GNU Public License

11.4. Chipmunk circuit design and simulation tool

Author
Dave Gillespie daveg@synaptics.com and John Lazzaro
lazzaro@cs.berkeley.edu

Description
Schematic Entry and Digital or Analog Simulation.

Status
vers 5.10, stable.

System requirements
X11 windowing system and older (XFree86-2.x) libs, 8 bpp (256 color) only

Detail
I haven't tried this one out yet.

Where and How to obtain it.
You can obtain the Chipmunk package from its home site at www.pcmp.caltech.edu <http://www.pcmp.caltech.edu/chipmunk/>.

Licensing/Copyright
Modified GNU Public License, Caltech specifically disclaimed from liability.

11.5. irsim

Author
Dmitry Teytelman, dim@leland.stanford.edu

Description
An event-driven logic-level simulator for MOS circuits

Status
Version 9.2, production.

System Requirements
X-Windows.

Detail
irsim is an X11 based simulator for MOS circuits. It has two simulation modes, either switch where each transistor is modelled as a voltage controlled switch, or linear where each transistor is modelled as a resistor in series with a voltage controlled switch, and each node has a capacitance.

Where and How to obtain it.
You can obtain irsim from: sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/circuits/irsim-9.2.linux.1.tar.gz>.

Licensing/Copyright
Freely Redistributable

11.6. Spice vers. 3f4

Author
University of California, Berkeley, port by Jeff@RyeHam.EE.Ryerson.Ca

Description
Spice is an analog circuit emulator.

Status
Stable release.

System requirements
Unknown.

Detail
Spice allows you to design and test circuits in a computer modelled environment to see how they will behave without having to touch a soldering iron, or solder. A readme file comes with the package. To install I did the following:

```
# cd /usr/src
# gzip -dc spice3f4.tar.gz | tar xvf -
# cd spice3f4
# ./utils/build linux
# ./utils/build linux install
```

Where and How to obtain it.
You can obtain version 3f4 of Spice from: sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/circuits/spice3f4.tar.gz>

Licensing/Copyright
Copyright held by University California, Berkeley. Freely redistributable provided you are not unfriendly to the U.S.

11.7. svgafft - Spectrum analyser

Author
Andrew Veliath, veliaa@rpi.edu

Description
svgafft is a spectrum analyser for Linux.

Status
Alpha, but usable.

System requirements
F77, Linux supported sound card, svgalib, a 486DX33 or better.

Detail
svgafft uses the /dev/dsp device and currently supports 16-bit and 8-bit sample resolution on supported Linux soundcards. It's display is something akin to a high-end spectrum analyzer with falling peaks. Andrew is working on an X-Motif version to be released soon.

Where and How to obtain it:
You can find the software at tsx-11.mit.edu <ftp://tsx-11.mit.edu/pub/linux/ALPHA/svgafft/svgafft-0.2h.tar.gz> and sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/sound/freqs/svgafft-0.2h.tar.gz>.

Licensing/Copyright
GNU Public License.

Contributed by:
Andrew Veliath

11.8. Audio Spectrum Analyser

Author
Philip VanBaren, phillipv@eecs.umich.edu

Description
An audio spectrum analyser for Linux SVGALIB or X-Windows.

Status
Alpha but usable

System requirements
Linux supported sound card, svgalib or X-Windows.

Detail
freq5a1 uses the /dev/dsp device, samples the incoming audio,
performs a fast fourier transform on the data and displays the
output in either 640x480 VGA or an X-Window.

Where and How to obtain it:
You can obtain freq5a1.tar.gz from: sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/sound/freq5a1.tar.gz> or
by mail from the author.

Licensing/Copyright
GNU Public License vers 2.0.

11.9. ObjectProDSP

Author
Paul Budnik, Mountain Math Software, support@mtnmath.com

Description
ObjectProDSP is an object oriented tool for design, development
and implementation of Digital Signal Processing. It allows you
to design your DSP network, runs simulations with oscilloscope
style plots and listings at any point in the network.

Status
alpha.

System requirements
XFree86 3.1.1 or better, g++ from gcc 2.6.3 or better, 32Mb of
total memory (real+swap) recommended, 6Mb of disk space for
minimum configuration, 40Mb disk for full installation.

Detail
There are a number of files that comprise the package. There is
a binary only package for Linux which I recommend you start
with. There is comprehensive documentation included from which
you can obtain installation and operation instructions.

Where and How to obtain it.
You can obtain ObjectProDSP from: sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/devel/opd>, tsx-11.mit.edu
<ftp://tsx-11.mit.edu/pub/linux/packages/dsp>, or ftp.funet.fi
<ftp://ftp.funet.fi/pub/OS/Linux/util/electronics/opd>. There
are a number of files that comprise the package, some of the
quite large so be prepared.
Licensing/Copyright
GNU Public License vers 2.0., Commercial licensing available.

12. Training/Educational Software.

Software to assist in education or training for amateur radio. Morse
Code tutorials, technical examination database, Computer Based
Training software, and the like are listed here.

13. Miscellaneous Software.

Software that didn't neatly fit into any other category.

13.1. Linux for HAMS CD-ROM

Author
Bruce Perens, bruce@pixar.com

Description
A complete linux distribution on CDROM specifically designed for
Amateur Radio operators.

Status
Not yet available.

System requirements.
Linux compatible hardware, some software will obviously require
specialised hardware to operate. No additional software should
be required.

Detail
A complete Linux distribution specifically catering for Amateur
Radio operators. It will include a fully featured Linux
installationplus a range of amateur radio specific software such
as those listed in this document. Bruce has detail and updated
status report available at the LinuxForHams WWW page
<http://www.rahul.net/perens/LinuxForHams>.

Where and how to obtain it:
It isn't yet available, details will be made available when it
is released.

Licensing/Copyright
GNU Public License.

Contributed by:
Bruce Perens

13.2. SunClock

Author
John Mackin, john@cs.su.oz.AU

Description
A clock that will show you instantly what parts of the globe are exposed by sunlight and what parts aren't.

Status
Released.

System requirements.
X-Windows.

Detail
sunclock is another of those desktop gadgets that most people think look nice but really don't have a lot of use for. I use sunclock to obtain an at-a-glance indication of the time anywhere in the world. In its iconic form it sits in a small Mercator projection. When maximised it produces the same image but obviously larger with slightly more detail. It also displays the date, local time and UTC. sunclock actually calculates mathematically what parts of globe are sunlit and which aren't, it seems quite accurate, so long as you assume the earth has no atmosphere.

Where and How to obtain it.
I haven't seen any precompiled sunclock binaries for Linux about, so check your nearest archie server. sunclock compiled straight out of the box for me.

Licensing/Copyright
Public Domain and may be freely copied as long as the notices at the top of sunclock.c remain intact.

13.3. Xearth

Author
Kirk Johnson, tuna@cag.lcs.mit.edu

Description
A rotating earth for X-windows root window. It has real life shading, and options for geostatic view, and non geostatic view. A prettier and more modern version of sunclock but requires a bit more processing power.

Status
Version 1.0.

System requirements.
X-Windows.

Detail
xearth is a sophisticated program which draws a colour picture of the earth onto your X Windows display. It offers either an orthographic view as you would see from space or the map like

mercator projection. You have a number of options in determining
the behaviour of the view. The details are available from the
xearth Home Page <http://cag-www.lcs.mit.edu/~tuna/xearth/> and
in the documentation which is supplied with the package.

Where and How to obtain it.
The source can be obtained from its home site at cag.lcs.mit.edu
<ftp://cag.lcs.mit.edu/pub/tuna/> or just about any X11/contrib
directory.

Licensing/Copyright
Copyright (C) 1989, 1990, 1993 by Kirk Lauritz Johnson. The
copyright notice included states that xearth is freely
redistributable so long as the copyright notice is left intact,
and be included in documentation.

Contributed by:
Kirk Johnson

14. How to contribute or update an entry.

I'd like for this list to be as complete and up-to-date as possible.
So I'm keen to hear about any developments or products that I don't
already know about, or that the entry is obselete or outdated for.

What I'd like as a minimum set of requirement would be something like
the following:

Name
The name of the software in question.

Author
Who wrote, or ported the software. An email address, or some
other means of contacting them is also essential.

Description
A single line description of what the software does.

Article Unavailable

301. Ground Wave Contest

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-06 00:00:00 UTC
From: Edward Oros <ac3l@worldnet.att.net>
Message-ID: <328164D8.6C4B@worldnet.att.net>
Source record: 213367

If you are in the Eastern Ohio/Northern West Virginia/Western Pennsylvania area... try out the 10 meter ground wave contest this Saturday, November 9th at 8:00 pm. til midnight. Find out just how far you can reach on the 10 meter band.

The contest center is on Pittsburgh, Pa., but there will be stations on from the tri-state area. It's lots of fun. Try to be there this weekend.

- --- BEGIN Linux HAM HOWTO part 1/2 ---

Linux HAM HOWTO, Amateur Radio.
Terry Dawson, VK2KTJ, terry@perf.no.itg.telecom.com.au
v2.2, 10 October 1996

It is hoped that this document will assist Amateur Radio operators in
finding and trying the various amateur radio software that has been
written for or ported to Linux. It is also hoped that as a consequence
of this information being available that more amateur radio operators
will choose Linux as the platform of choice for their experimentation,
and that software developers will choose Linux as the platform for
their software development, further expanding the role of operating
systems like Linux in the Amateur Radio field.

1. Introduction.

This list was prompted by comments that had been expressed in the
various Linux newsgroups about the number of amateur radio operators
that were involved with Linux. It is now clear that Linux is becoming
a popular platform for Amateur Radio development work.

This list was originally called the RADIOLINUX list, but has been
moved into the Linux Documentation Project HOWTO collection, so it has
been renamed the HAM-HOWTO. I make no apologies for the name.

1.1. Changes from the previous version

Additions:
cw2hex - a program to assist in making keyer eproms

Corrections/Updates:
Fixed XNet web site details, ooops, thanks Carl.
Many minor smgl syntax fixes.

2. Where to obtain new versions of this document.
```

The Linux Documentation Project runs a Web Server and this document appears there as The HAM-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/HAM-HOWTO.html>.

Dennis Boylan N4ZMZ dennis@nanovx.atl.ga.us makes it available at the following three locations:

www.com <http://www.com/linux/radio/index.html>, www.hboc.com <http://www.hboc.com/linux/index.html> and www.lan.com <http://www.lan.com/linux/index.html>.

John Gotts N8QDW jgotts@engin.umich.edu makes it available at: www.engin.umich.edu <http://www-personal.engin.umich.edu/~jgotts/linuxhamsoft.html>.

Dan Todd dantodd@fusilli.ucdavis.edu makes it available at the following two locations: wheel.dcn.davis.ca <http://wheel.dcn.davis.ca/~dantodd/Linux/HAM-HOWTO.html>, and fusilli.ucdavis.edu <http://fusilli.ucdavis.edu/Linux/HAM-HOWTO.html>.

Alan Hargreaves VK2KVF alan@dap.CSIRO.AU makes it available in Australia at: www.dap.csiro.au <http://www.dap.csiro.au/RadioLinux>.

The Tuebingen Radio Club has it available from their home page at: DARC Home Page <http://www.neckar-alb.de/darc/welcome.html>

Please let me know if you'd like to make it available somewhere too. I'd like to see it on some Web Servers that are accessible from radio.

3. Satellite Software.

The following software is for use in experimentation with Satellite communication.

3.1. MicroSat Ground Station Software

Author
John Melton, G0ORX/N6LYT, g0orx@amsat.org and Jonathan Naylor G4KLX, g4klx@amsat.org

Description
Microsat Ground Station software.

Status
BETA. Version 0.9-Xaw released.

System requirements
Alan Cox's kernel based AX.25 support ver 1.1.12 or better. X-Windows. The programs make use of the Athena Widgets and look much better with the 3D libraries.

Detail
This software allows you to use of a KISS tnc to directly communicate with the Microsat series of satellites. It provides an Athena Widgets based X-Windows interface, and allows you a comprehensive range of means of interacting with the satellite.

The software should work with any window manager.

The software provides the following programs:

xpb:
broadcast monitor

xpg:
ftl0 file upload program, message upload program

xtlm:
telemetry display program

downloaded:
downloaded file list viewer

directory:
directory list viewer

message:
message preparation application

viewtext:
uncompressed ASCII text file viewer

viewlog:
display the contents of some log files

xweber:
special program for downloading webersat images

phs:
general purpose PACSAT header stripper
Where and How to obtain it.
John's software is available from: ftp.amsat.org
<ftp://ftp.amsat.org/amsat/software/Linux/microsat-0.9-Xaw.tar.gz>
or ftp.funet.fi
<ftp://ftp.funet.fi/pub/ham/satellite/pacsat/microsat-0.9-Xaw.tar.gz>.
Please check for new versions.

3.2. SatTrack - Satellite tracking program

Name
SatTrack

Author
Manfred Bester, DL5KR, manfred@ssl.berkeley.edu, (510) 849-9922

Description
Satellite realtime tracking and orbit prediction program with
X11 color graphics.

Status
Version 3.1 has been released.

System requirements
A vt100 terminal and or X11 server. A Maths Coprocessor is
useful, but not essential, for good performance.

Detail
SatTrack is a satellite tracking program that has been written
in 'C' language on a UNIX workstation. It provides two different
live displays, for single or multiple satellites, and two
different orbit prediction facilities. Cursor controls used in
both live displays are compatible with the VT100 standard, which
allows the program to be run basically from any terminal. An
optional X Window graphics display shows the typical world map
tracking chart. The orbit prediction can be run either
interactively or in a batch mode. In the latter case all
necessary parameters are specified on the command line. The
program uses the NORAD/NASA two-line Keplerian element (TLE)
sets directly.

The current version of SatTrack can track a single satellite
and/or display multiple satellites for a single ground station.
It also can control suitable ground station hardware, like
antennas and radio equipment, and has an autotrack mode in which
it switches automatically between a number of specified
satellites. For calibration purposes tracking of the Sun and the
Moon are also provided. Future releases will provide more
options. SatTrack requires about 5 MB of disk space in the full
distribution with eight different world maps (2 styles, with 4
different sizes each, to fit everyone's screen and taste) and
less than 1.5 MB of memory at run time. More information can be
obtained from the SatTrack WWW Home Page
<http://www.primenet.com/~bester/sattrack.html>

Compiling the software under Linux is quite straightforward.
Manfred has designed the Makefile to compile the software
directly under your home directory, this is easy to change.
The steps I took were:

```
# cd /usr/src
# export HOME=/usr/src
# gzip -dc sattrack-3.1.1.tar.gz | tar xvf -
# cd SatTrack/src
# vi Makefile
{Comment SUN4 compile options}
{Uncomment the linux options}
{Select the options you want}
# make
```

Where and How to obtain it.
SatTrack can be found at: ftp.amsat.org
<ftp://ftp.amsat.org/amsat/software/Linux/sattrack-3.1.1.tar.gz>
or ftp.jvnc.net
<ftp://ftp.jvnc.net/priv/kupiec/sattrack/sattrack-3.1.1.tar.gz>
or the SatTrack WWW Home Page
<http://ssl.berkeley.edu/isi_www/sattrack-3.1.1.tar.gz>

Licensing/Copyright
The software is Copyright of Manfred Bester. It can be used without special permission for non-profit, non-commercial use. For commercial applications a license from the author is required.

Contributed by:
Manfred Bester, DL5KR

3.3. Predict

Author
John A. Magliacane, KD2BD, kd2bd@amsat.org

Description
A satellite orbital prediction program that also tracks the sun's position to predict visible satellite passes.

Status
Complete and working.

System requirements
predict is a screen-oriented program that utilizes the ncurses-1.8.5 (or later) library. A color terminal is a plus, but not a necessity.

Detail
Features of predict include azimuth and elevation headings of satellite passes, orbital phase, sub-satellite point locations, slant ranges, orbit numbers, and sunlight visibility as a function of date and time. The program is simple, fast, and easy to use. Predict maintains an orbital database for 21 satellites that can be updated by the user through the keyboard or by using files containing NASA 2-line orbital element data. Since this program operates under a multiuser environment, each user on the system owns and maintains his or her own unique orbital data base.

This program has been compiled using the highest level of compiler optimization for high speed execution, and uses an a.out binary format for greatest compatibility.

To install the package use the following:

```
# cd /
# tar xvfz predict.tgz
```

Where and How to obtain it.
You can obtain predict from: pilot.njin.net
<ftp://pilot.njin.net/pub/SpaceNews/linux>

Licensing/Copyright
This software is available free of charge and must be used for
non-commercial purposes only.

Contributed by
John A. Magliacane, KD2BD

3.4. UO11

Author
John A. Magliacane, KD2BD, kd2bd@amsat.org

Description
A simple UoSAT-OSCAR-11 satellite telemetry decoding program.

Status
Complete and working.

System requirements
A 1200 baud UoSAT-OSCAR-11 FSK demodulator (Bell-202 is
suitable), a VHF-FM receiver that can tune to 145.825 MHz, a
small yagi antenna, and a communications program such as Minicom
that can save 1200 baud ASCII telemetry data to a text file.

Detail
uo11 decodes ASCII telemetry data that has been captured through
a terminal program, error checks the received data, and applies
calibration equations to the received data to produce a report
that can be easily understood and analyzed. uo11 comes pre-
compiled (a.out format) with a man page entry for ease of use.

To install you should use the following commands:

cd /
tar xvfz uo11.tgz

Where and How to obtain it.
You can obtain uo11 from: pilot.njin.net
<ftp://pilot.njin.net/pub/SpaceNews/linux>.

Licensing/Copyright
This software is available free of charge and must be used for
non-commercial purposes only.
Contributed by
John A. Magliacane, KD2BD

3.5. Dove

Author
John A. Magliacane, KD2BD, kd2bd@amsat.org

Description
A simple DOVE-OSCAR-17 satellite telemetry decoding program.

Status
Complete and working.

System requirements
A terminal node controller (TNC), a VHF-FM receiver that can
tune to 145.825 MHz, a small yagi antenna, and a communications
program such as Minicom that can save 1200 baud ASCII telemetry
data to a text file.

Detail
dove decodes ASCII telemetry data that has been captured through
a terminal program and applies calibration equations to the
received data to produce a report that can be easily understood
and analyzed. dove comes pre-compiled (a.out format) with a man
page entry for ease of use.

To install Dove you should use the following commands:

cd /
tar xvfz dove.tgz

Where and How to obtain it.
You can obtain Dove from: pilot.njin.net
<ftp://pilot.njin.net/pub/SpaceNews/linux>.

Licensing/Copyright
This software is available free of charge and must be used for
non-commercial purposes only.

Contributed by
John A. Magliacane, KD2BD

3.6. Kepgen

Author
John A. Magliacane, KD2BD, kd2bd@amsat.org

Description
A simple, yet useful utility that generates Keplerian data files
in the NASA 2-line format from data entered through the
keyboard.

Status
Complete.

System requirements
kepgen is a screen-oriented program that utilizes the
ncurses-1.8.5 (or later) library. A color terminal is a plus,
but not a necessity.

Detail
kepgen allows the user to create checksummed Keplerian data
files in the NASA 2-line format using orbital data entered via

the keyboard. kepgen was created out of the need for generating
2-line orbital files from orbital data copied from WA3NAN audio
transmissions during Space Shuttle missions. The files created
can be read by virtually any satellite tracking or orbital
prediction program. kepgen comes pre-compiled (a.out format)
with a man page entry for ease of use.

To install kepgen you should use the following commands:

cd /
tar xvfz kepgen.tgz

Where and How to obtain it.
You can obtain kepgen from: pilot.njin.net
<ftp://pilot.njin.net/pub/SpaceNews/linux>.

Licensing/Copyright
This software is available free of charge and must be used for
non-commercial purposes only.

Contributed by
John A. Magliacane, KD2BD

4. Shack Automation Software.

Software for simplifying tasks in the shack. Examples might include
software for controlling the newer breed of radios, logging programs,
QSL database, or antenna rotation.

4.1. FT-890 remote control

Author
Emarit Ranu, KG0CQ, drranu@holly.ColoState.EDU

Description
A simple program to control a Yaesu FT-890 transciever via its
CAT port from linux.

Status
Working

System requirements
Yaesu FT-890, Yaesu FIF-232C interface converter or homebuilt
equivalent (Feb 1993 "QST", page 37). Linux, serial cable.

Detail
The program is started with one parameter specifying the com
port to use. Once started the program is menu driven. Future
versions will support an X-Windows interface.

Where and How to obtain it.
The software is currently only available from the author by
email.
Licensing/Copyright
You may copy this program millions of times, the only

restrictions are:

- You may not charge ANYONE for the program itself.

- You may not distribute modified versions of the program.

- If you distribute the program, it MUST be the ORIGINAL tar file as received by the author. The README file has to be included.

Contributed by:
Emarit Ranu, KG0CQ

5. Packet Radio

Software for use in conjunction with, or for facilitating packet radio.

5.1. XNet

Author
Richard R. Parry, W9IF, rparry@qualcomm.com

Description
A traffic analyser for AX.25 networks.

Status
Stable, released.

System Requirements
TCL-7.5/Tk-4.1, KISS TNC.

Detail
The XNet software provides a variety of tools that an AX.25 lan manager could use to analyze and manage traffic. The tools present a graphical view of all of the traffic received at the monitoring node allowing the observer to easily see where the traffic flows normally and other information such as:

- Packet counts

- Node statistics

- Network Utilisation figures

The network is displayed with icons representing hosts and lines between them representing the traffic flow. The graphical display provides an instantly absorbable view of the traffic on the network being monitored. Richard has more information and sample displays at: www.qualcomm.com <http://www.qualcomm.com/~rparry/xnet.html>.

Where and how to obtain it
You can obtain the software from: www.qualcomm.com <http://www.qualcomm.com/~rparry/xnet/xnet-1.1.tar>

Licensing/Copyright etc.
XNET is a freeware program. It may be freely distributed.

Contributed by
Richard Parry, W9IF

5.2. monax25

Author
Skip Hansen, WB6YMH and Harold Price, NK6K.

Maintained by
Jonathon Naylor, jsn@cs.nott.ac.uk

Description
The monax25 provides a number of utilities for collecting
statistics on AX.25 channel usage.

Status
Version 1.1, Stable

System Requirements
KISS TNC.

Detail
The original ax25mon programs were written for MSDOS. This
package is a port of that software to Linux.

Where and how to obtain it
The `monax25' package may be obtained from: sunsite.unc.edu ham
applications directory
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/monax25-1.1.tar.gz>.

Licensing/Copyright etc.
Freely copyable, not GPL though.

5.3. splitscreen

Author
Dave Brown, N2RJT, dcb@vectorbd.com

Description
Split screen `ttylink' style program with scroll back and log to
file.

Status
Version 1.4.1, stable.

System Requirements
Requires the `ncurses' package.

Detail
The splitscreen is a unix implementation of the NOS ttylink
command. It provides a splitscreen display that makes user to
user chats much easier than the usual telnet interface. The
scroll back buffer and log to file features are useful when you

use the splitscreen program to access services like convers

Where and how to obtain it
The splitscreen package is available from: sunsite.unc.edu ham
applications directory
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/splitscreen-1.4.1.tar.gz>

Licensing/Copyright etc.
Public Domain

5.4. talk-ax25

Author
Dave Brown, N2RJT, dcb@vectorbd.com

Description
Berkeley `talk' client modified to support Linux AX.25

Status
working.

System Requirements
Requires the `ncurses' package.

Detail
The `talk-ax25' program is a modifed version of the conventional
Berkeley `talk' program to support Linux AX.25 operation.

Where and how to obtain it
The `talk-ax25' program is available from: sunsite.unc.edu ham
applications directory
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/talk-ax25-960426.tgz>
or from: ftp.ucsd.edu
<ftp://ftp.ucsd.edu/hamradio/packet/tcpip/linux/talk-
ax25-960426.tgz>.

Licensing/Copyright etc.
Berkeley style. Freely distributable, copyright messages must be
retained.

5.5. 7Plus for Linux

Author
Axel Bauda, DG1BBQ, DG1BBQ@DB0CL.#HB.DEU.EU

Description
Uuencode-like file coder for BBS Send and Forward of binary
files.

System Requirements
none special

Detail
Provides the ability to 7Plus encode binary files to allow them
to be transmitted within AX.25 BBS messages.

Where and how to obtain it
The 7Plus encoder is available from: sunsite.unc.edu ham applications directory <ftp://sunsite.unc.edu/pub/Linux/apps/ham/7pl217sr.tgz>.

Licensing/Copyright etc.
Hamware - Free for use by amateur radio use.

5.6. TNOS

Author
Brian A. Lantz, brian@lantz.com

Description
TNOS is a NOS derivative that is being actively supported and which is available for both DOS and Linux. It features enhancements not found in other NOS versions.

Status
The current version is 2.0 and is stable.

System Requirements
Kernel networking slip support if you want to link the normal Linux network facilities with TNOS. A kiss tnc.

Detail
Brian maintains a World Wide Web server which contains up to date information on TNOS, you can find it at www.lantz.com <http://www.lantz.com/tnos/tnos.html>.

Where and how to obtain it
The current version of TNOS is always available from: ftp.lantz.com <ftp://ftp.lantz.com/tnos/current/linux/>, sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/>, or ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/tnos/>.

Licensing/Copyright etc.
Free for use by amateur radio operators and educational oraganisations

5.7. N0ARY Packet BBS for UN*X

Author
Bob Arasmith, N0ARY, ported to Linux (and others) by Bob Proulx, KF0UW, rwp@fc.hp.com

Description
A packet bbs implemented under UN*X.

Status
ALPHA. Bob is running version ARY-0.9 on both Linux and HP-UX. The next version from N0ARY which is called 4.0 is in alpha test/development release. Bob has not been able to bring this online yet and is still running 0.9+kf0uw mods. Bob has about half it working with Alan Cox's AX.25 kernel which would be the

desirable combination.

System Requirements.
Linux installation, C Compiler, plus HAM radio TNC hardware.

Detail
This bbs has an excellent packet user interface. It has a compatible set of commands with the RLI bbs so users will be familiar with it immediately. It then extends the command set to be a very nice natural language style interface (e.g "list at allus about KPC-3"). Many csh style bang commands are supported. Also included is a mail interface to provide a packet to internet gateway.

Currently you need to customize the source code for your installation so you need some C programming proficiency.

Where and How to obtain it.
For a Linux version or for Linux information send mail to rwp@fc.hp.com. For a SunOS version contact bob@arasmith.com. This code is not packaged for distribution yet since it is not past the alpha stage of development.

Licensing/Copyright
Copyright by Bob Arasmith, N0ARY, but freely redistributable.

Contributed by:
Bob Proulx, KF0UW

5.8. LBBS - Linux BBS message gateway

Author
Daryl L Miles, G7LED, dlm@frink.demon.co.uk

Description
A BBS package designed to operate with either the native AX.25 kernel code or with the Wampes package.

Status
In development, working.

System requirements
Kernel AX.25 support or the Wampes package. sendmail, CNEWS.

Detail
Daryl's aim was to build a platform on which amateurs could build a Packet BBS to smtp gateway for Linux. I'm not sure what the current status is as the last version I could find was dated 30 Jun 1995. The latest binary version supports:

- MBL, FBB batching, FBB compressed, FBB type 1 compressed forwarding with restart facility implemented, deferring, and rejection.

• various Linux transport mechanisms including TCP kernel, AX.25 kernel, Wampes NetROM, AX25 or TCP.

• Simple dialer, to allow connections through AX.25 or NetROM nodes.

• White Pages

• Transient handling of type A (ACK messages).

• SMTP/NNTP<>BBS gatewaying implemented heavily to the extent that the user front end will be accessing the NetNews spool to retrieve articles.

• Message filter mechanism

• Field swapping (like SWAPP.SYS in FBB).

• Multiuser/connect.

To install, I did the following:

```
# cd /usr/src
# mkdir LBBS
# tar xvfz LBBS-0.1.6A.tar.gz
# cd LBBS
# ./Install.sh
```

This created a /usr/lbbs directory. The README.Setup file suggest an order in which to configure the BBS.

Where and How to obtain it.
You can obtain LBBS from: G7PIT's ftp site <ftp://rsl_pc3.ion.le.ac.uk/pub/LBBS>, or ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/linux/>.

Licensing/Copyright
Freely distributable for any non-commercial Amateur Radio use only. No warranty. Will be changed to GPL when software is stable.

5.9. MBL/RLI message to NNTP and email converter.

Author
SM0OHI, pme@it.kth.se

Description
Software that will convert incoming MBL/RLI messages into either NNTP or RFC-822 formatted mail messages.

Status
Development, not yet released.

System requirements
Unknown.

Detail
This software would be ideally suited to those who want to establish a mail and news gateway between conventional tcp/ip networks and the amateur radio mail network.

Where and How to obtain it.
Not yet availale.

Licensing/Copyright
Unknown.

Contributed by:
SM0OHI

5.10. Packet Cluster Node software

Author
Franta Bendl, DJ0ZY, and Bernhard ("Ben") Buettner, DL6RAI, root@dl6rai.muc.de

Description
A PacketCluster like system running on Linux.

Status
Released in October 1995.

System Requirements
Linux Kernel version 1.2.0 or greater with Alan Cox's AX.25 version 025 driver, TCP/IP networking, SysV IPC. Also needs Perl and KISS TNC hardware on serial device.

Detail
PacketCluster nodes have been available for about six years. The original software was written by Dick Newell, AK1A, and is running under DOS. clx is a system which clones a PacketCluster node. To the outside user commands and features are mostly identical, remote PacketCluster nodes, which can be networked, don't see the difference between a generic PacketCluster node and clx. So it fits well into an established network of PacketCluster nodes.

clx is not a user application, it is network node software. As such it is not of much use for the individual amateur. SysOPs of PacketCluster nodes with some experience on both PacketCluster and Linux will find this application interesting.

Here are some of the features of CLX:

- It is fully compatible with the internal PCxx protocol and from a users' point of view. It allows multitasking and different priorities for different things.

- The software detects looping DX spots without generating endless messages. clx filters out such duplicate information. We have implemented a concept which allows us to connect the network at

multiple points, which would formerly have been called a "Cluster Loop". clx knows of so-called "active" and "passive" links. The outcome is that more DX information is seen by clx.

• An interface to call your external programs (even dialog programs).

• clx uses modern programming concepts like shared memory for common data, lex & yacc to implement command language, shared libraries to keep binaries small (this is still on our wish list), remote procedure calls for inter process communication. It is strictly modularized with its own dedicated process for every major task.

• Comprises the following modules:

```
con_ctl
interfaces AX.25 kernel code and provides a socket for local
users.

rcv_ctl
manages receive spooling.

snd_ctl
manages transmit spooling.

rm_disp
receive message dispatcher, forwards messages to other
processes.

usr_req
user database requests, forks a process for every database
task to make it run in the background. The background process
later sends the results directly to send_ctl.

mb_ctl
mailbox control. The mailbox keeps messages in a file system,
header information is stored in the database.

usr_ctl
user administration (logins, logouts, logbook).

usc_mng
manages external user commands and command extensions.

iu_com
inter user communication (talk, conference).

send_ctl
transmit spooling, handling priorities.

icl_com
inter node communication (processing and generating PCxx
messages).
```

clx_ctl
system administration, installing shared memory pages.

int_com
manages internal program communications.

• The following is the only application program which can be run on the console:

loc_usr
allows console operator(s) to log in like a normal user.

Future enhance planned are:

• A console monitor to watch ongoing activities

• Speed optimization

• An internal clx protocol

• An additional command shell for experienced users

Where and How to obtain it:
ftp.funet.fi <ftp://ftp.funet.fi/pub/ham/unix/Linux/cluster>

There are five files that make up the package:

• 00Index

• clx_200.tgz

• install.clx

• README

Licensing/Copyright
clx (c) by Franta Bendl (DJ0ZY) and is available for non-commercial use, but the authors want to keep track of who is using their product, so before you can actually use the software you have to ask for an encrypted callsign string to be placed in the configuration file. You must send mail to <clx_us@dl6rai.muc.de> to organise this.

Contributed by:
Bernhard ("Ben") Buettner, DL6RAI

5.11. DPTNT Terminal and DPBOX BBS package.

Author
Mark Wahl, DL4YBG, DL4YBG@DB0GR.#BLN.DEU.EU, wahlm@berlin.snafu.de and Joachim Schurig, DL8HBS, DL8HBS@DB0GR.#BLN.DEU.EU, h0187akk@rz.hu-berlin.de
Description
A suite of programs that provide BBS and Terminal programs for Linux.

Status
Stable and working.

System requirements
TNC supporting WA8DED hostmode or KISS protocols.

Detail
TNT is a full featured hostmode terminal program. Compiling it on Linux is as difficult as untarring the source and typing `make'. It provides both a `dumb' terminal and X11 version. It comes with some comprehensive documentation which describes its features in some detail. Its main features are:

Multiple sessions:
TNT supports multiple packet radio connections on virtual screens that you can switch between. Each session window provides split screen (seperate transmit and receive text) operation with a status line. Commands can be entered in either a command session, or in any terminal session using a command key. Each of the virtual screens can be larger than the physical screen and can be scrolled around.

Data capture, file transfer and logging:
A number of options are available for logging received text to files. You can log transmit, receive or both to a log file. You can overwrite or append received data to existing files. You can use the `autobin' protocol to transmit or receive binary files.

Remote Shell operation:
You can provide a shell to remote users so that they can access other programs on your computer. You can also run a program and direct its input/output to a channel so that users can use it.

Redirection of devices to a channel:
TNT allows you to redirect input/output from a channel to a device, a modem for example.

Umlaut conversion:
TNT provides umlaut conversion if necessary.

Remote mode:
Remote users can issue command themselves if allowed to do so.

Socket mode:
You can configure tnt so that it opens a socket for users to telnet to that allows them operation just as you have from the console. This is useful where your linux machine is on an ethernet and you want other terminal on the net to have use of your radio.

DPBOX is a full featured BBS supporting the following features:

- F6FBB, W0RLI, TheBox style forwarding protocols.
- 8-bit transparent handling of messages using AutoBIN protocol.
- BBS data compressed to save space on disk, forwarding and downloading.
- "Live message capture" off BBS frequency, saves network traffic.
- PACSAT style bulletin broadcast transmitter and receiver.
- up to 200 simultaneous users.

Where and How to obtain it.
TNT by itself is available by anonymous ftp from: ftp.funet.fi <ftp://ftp.funet.fi/pub/ham/unix/packet/tntsrc09.tgz>. The DPTNT package may be found at: ftp.funet.fi <ftp://ftp.funet.fi/pub/ham/unix/packet/dptnt/>, or ftp.tapr.org <ftp://ftp.tapr.org/pub/tapr/software_lib/Linux/>, or ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming/>.

The Home Pages of the developers are at: DL4YBG <http://www.snafu.de/~wahlm/> and DL8HBS <http://hppool0.rz.hu-berlin.de/~h0187akk/>

Licensing/Copyright
The TNT and DPBOXT programs are covered by the GNU Public License. The TFKISS program is covered by ALAS (a german license for Amateur Radio use), and the DPBOX program is freely distributable for Amateur Radio use.

5.12. IPIP encapsulation daemon.

Name
Mike Westerhof's IPIP encapsulation daemon.

Author
Mike Westerhof KA9WSB (original code), then Bdale Garbee N3EUA (port to BSD), then Ron Atkinson N8FOW and John Paul Morrison (port to Linux), then Bdale rolled it all back together again.

Description
A daemon that will allow you to use your linux machine as an IPIP encapsulating gateway.

Status
Ron is running this code himself, and the other version have been run quite successfully.

System requirements
KISS TNC, any version of Linux supporting RAW sockets.

Detail
If you've ever used an internet gateway from your amateur packet radio you have probably been connected by an encapsulation

gateway of some descpription. Most run KA9Q's NOS and DOS, but others run Unix and this daemon. It allows you to encapsulate IP within IP, so that you can 'tunnel' IP connections over the Internet. The software allows you to connect a KISS TNC to your linux machine and to have all datagrams received on it carried across the Internet to a similar gateway. Bdale has installation instructions in the package.

Where and How to obtain it.
This software is available from the col.hp.com <ftp:///col.hp.com/hamradio/packet/etc/ipip/ipip.tar.gz> ftp site.

Licensing/Copyright etc.
Freely distributable, though Bdale asks that if you use the code and like it you might send him a QSL card or a postcard.

Contributed by:
Ron Atkinson, N8FOW, and Bdale Garbee, N3EUA

Note:
You may want to consider using kernel based tunnel daemon now instead.

5.13. AXIP encapsulation daemon.

Name
Mike Westerhof's AXIP encapsulation daemon.

Author
Mike Westerhof KA9WSB, ported to Linux by Ron Atkinson N8FOW.

Description
A daemon that will allow you to use your linux machine as an AXIP encapsul ating gateway.

Status
Not properly tested, but assumed to work ok.

System requirements
KISS TNC, any version of Linux supporting RAW sockets.

Detail
This daemon is the partner to the IPIP encapsulation daemon. It allows you to encapsulate AX.25 frames in IP to carry them across the Internet. This is useful for linking AX.25 networks in remote areas. Ron has supplied a Makefile for linux, and with it the software compiled without errors on my system running a recent version kernel. Ron has also written some README files which give you the detail necessary to compile the system and the original documentation describes how to configure it.

Where and How to obtain it.
This software is available in the sunsite.unc.edu ham apps

directory
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/ax25ip.tar.gz>.

Licensing/Copyright etc.
Freely distributable so long as the original copyright notice is not removed.

Contributed by:
Ron Atkinson, N8FOW

5.14. Ping-Pong Convers Server

Name
Fred Baumgartens Convers Server for Linux.

Author
Fred Baumgarten, DC6IQ, dc6iq@insu1.etec.uni-karlsruhe.de

Description
This is a version of the convers server that allows multiple users to simultaneously chat with each other in a round-table style conversation. It is compatible with the NOS convers servers, but provides extra facilities such as saving/restoring of Personal Text and Chanel Topics.

Status
In use of a number of popular convers servers, appears very stable.

System requirements.
Linux, GNU make, C compiler.

Detail.
Complete installation instructions are included in the INSTALL file that is included in the distribution.

Where and How to obtain it.
A distribution of this software is available at sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/convers/>. The home of the software is at insu1.etec.uni-karlsruhe.de ftp server <ftp://insu1.etec.uni-karlsruhe.de/pub/hamradio/convers/convers>

Licensing/Copyright etc.
Presumably copyright Fred Baumgarten (not specifically stated), but some portions appear to be free for non-commercial use and copying provided the copyright notices stay intact.

5.15. RSPF Daemon

Name
RSPF - Radio Shortest Path First routing daemon for Linux

Author
Craig Small vk2xlz csmall@triode.apana.org.au

Description
An implementation of the Radio Shortest path First routing protocol for linux. The daemon supports version 2.2 of the protocol which corrects a lot of bugs and problems that were present in version 2.1.

Status
Alpha - running, needs testing and bug reports. Current version is 0.05

System requirements.
Requires Alan Cox's kernel based AX.25 code.

Detail
This program will allow Linux to become an RSPF router. It addresses some of the quirks of RSPF v2.1, the version in NOS which means that it is incompatible with the NOS version. It will also allows remote/local queries via a tcp session for debugging and diagnostic purposes.

Where and How to obtain it.
Current versions are always available from sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/> or ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming> or from the author.

Licensing/Copyright
GNU Public License vers 2.0

Craig Small, VK2XLZ

5.16. Michael Westfall's TTYLINK Daemon

Name
ttylinkd - a ttylink daemon for Linux.

Author
Michael Westfall, N6KUY, mwestfal@.csci.csusb.edu

Description
A split screen terminal program that listens on the ttylink port and accepts incoming connection requests.

Status
Seems to work fine.

System requirements
none special.

Detail
This is a standalone program that does require you to change the configuration of your system at all. If you have root access on your machine then you run the program in a VT or in an XTerm and it will clear the screen and wait for an incoming connection on

port 87 (ttylink). When a connection is received it will provide
you with a split screen display with which to communicate with
the calling person.

Where and How to obtain it.
You can obtain ttylinkd from: sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/ttylinkd.tgz> or
ftp.ucsd.edu
<ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming/ttylinkd.tgz>.

Licensing/Copyright
Unknown, presumed freely distributable.

5.17. Craig Small's TTYLINK Daemon

Name
ttylinkd - a ttylink daemon for Linux.

Author
Craig Small, VK2XLZ, csmall@triode.apana.org.au

Description
A daemon to accept a ttylink (port 87) tcp/ip connection and
convert it into a talk request for a user on the host machine.
This may also be configured for use with the ax25d program so
that AX.25 users may also make use of it to connect to you.

Status
Alpha, but working.

System requirements.
Kernel networking support with AX.25 support if desired.

Detail
Because the talk protocol is a non-standard, that is it isn't
actually defined anywhere (except the source), the ttylink
protocol from NOS has become the defacto standard, at least for
amateurs, to provide keyboard to keyboard communication over
tcp/ip. This daemon fills the need for something to answer
ttylink requests to linux machines.

To build and install the software, I did:

```
# cd /usr/src
# tar xvfz ttylinkd-0.02.tar.gz
# cd ttylinkd-0.02
<edited the Makefile to change the SYSOP_USER>
# make
# cp ttylink /usr/sbin
<edited /etc/service, /etc/inetd.conf as instructed in README>
# killall -1 inetd
```

Where and How to obtain it.
You can obtain the latest version of ttylinkd from:

sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/> or
ftp.ucsd.edu
<ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming>.

Licensing/Copyright
GNU Public License vers 2.0

6. Morse Code

Software for use in conjunction with, or for facilitating Morse
communication.

6.1. cw2hex

Author
G. Forrest Cook, WB0RIO, cook@stout.atd.ucar.edu

Description
cw2hex converts ascii text into Hex files for making keyer
EPROMS.

Status
version 1.1 is tested and ready to go.

System requirements
standalone textual program, requires gcc to compile

Detail
This program takes a textual input and converts it to morse
encoded characters in the form of a standard Intel HEX file. The
Hex file can be used to program an EPROM which can then be
connected to a simple circuit that generates canned messages.
Possible uses are CW calling machines and CW beacon transmitter
keyers. There is an accompanying schematic for a keyer circuit
that works with this software.

Where and How to obtain it.
You can obtain cw2hex from www.atd.ucar.edu
<http://www.atd.ucar.edu/homes/cook/software.html>

Licensing/Copyright
GNU Copyleft

Contributed by:
G. Forrest Cook, WB0RIO

6.2. SoundCard CW

Author
Steve Merrifield, VK3ESM, sjm@ee.latrobe.edu.au

Description
Morse Code practice for Linux, using a soundcard

Status
Completed

System requirements
Linux supported soundcard with FM support.

Detail
This program generates morse code characters using the
soundcard. It does not rely on the Linux virtual console sound
features and may therefore be used either with X11 or from a
virtual console. Its features include:

- adjustable frequency
- adjustable volume
- adjustable speed
- adjustable delay
- adjustable group count
- generation of random groups
- able to decode and play text files

Where and How to obtain it.
The software may be obtained from its home site at:
livewire.ee.latrobe.edu.au
<http://livewire.ee.latrobe.edu.au/~sjm/morse>.

Copyright/Licensing
Berkeley style copyright. The software may be freely used so
long as credit is given to the original author.

Contributed by:
Steve Merrifield, VK3ESM

6.3. GW4PTS Morse trainer.

Author
Alan Cox, GW4PTS, alan@lxorguk.ukuu.org.uk

Description
A Morse Code trainer that uses the PC internal speaker

Status
stable, works quite well, unfinished.
System requirements
Linux, any version

Detail
Alan wrote this small program in only an hour. It is quite neat,
and allows you to play morse at a range of speeds and
frequencies through the PC internal speaker. You can specify the
text to be played either from the command line, from a file, or

the program is capable of generating random character groups. As it stands you must invoke the program from a Linux Virtual Console, as it relies on certain kernel calls to produce the sound, and these don't work as easily from an XTerm. As it sounds each character it lists the character in verbal form (Di, Dit, Dah etc.) to the screen. Alan is hoping that someone will take the code and enhance it with the features he has listed in the comments at the head of the source file.

Where and How to obtain it.
I've had a large number of responses from people seeking this code, so I've obtained Alan's permission to make it available. You can obtain it from sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/GW4PTS.morse.tar.gz>.

Copyright/Licensing
GNU Public License 2, freely redistributable, no warranty.

6.4. morse (aka superiormorse)

Author
Joe Dellinger, joe@sep.stanford.edu, jdellinger@trc.amoco.com, joe@soest.hawaii.edu

Description
A morse-code practice program for UNIX workstations.

Status
Quite stable

System Requirements
Currently supports X11, Sun4, HP, Indigo, and Linux

Detail
Lots of features and options. Includes a utility for generating random content QSOs, similar to those used in the FCC exams.

Where and How to obtain it:
morse can be obtained from: sepftp.standford.edu <ftp://sepftp.stanford.edu/pub/UNIX_utils/morse/morse.tar.gz>.

FOR SALE :Ctek Cables these are interfaces that plug into a OKI 900 handheld cell phone and along with PC software allow it to become a powerful 800mhz scanner that will follow calls . NO MORE LOST CALLS like the normal scanners this tracks the call. Plus displays DTMF and lots other data on your pc screen. THESE ARE GREAT TOYS to test your cell phone ;)

2 Oki 900 phones in Perfect shape !!! $175.00 ea.
They come with batteries, ant.,chargers.

2 Ctek cables for the oki 900 with CIA,and Scan plus software.$175.00 ea.

2 5 ESN chips for the oki 900 $100.00 ea.

1 Moto Copycat with cables and CF-10 loader phone WILL DO ELITES.FLIPS.BAGS.AND THE BRICKS.$750.00 takes all.

Files for sale
I have code for the following .... CopyCat ... 5 ESN mod.... Ctek Cables... S/A Cable Boxes ... Novaplex programming software ... DDI KEYS...CF-10 Loader .... G2-amps .Plus tons of hacker files on CD. Complete hacking guide from scrambling news .
******* It's all going so make an offer ********

304. Re: The FCC comes through - got my new call!

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-06 00:00:00 UTC
From: Bill@halcyon.com

Well, the Feds finally came through with the old timer call signs some of us have been waiting for. I didn't mind the wait - I am glad I am able to get one of these great old calls that have been silent for many years. It only seems fitting that they be reissued so they can once again be alive and in use on the air instead of dormant in some bureatcratic file cabinet.

I got my second choice. Its W1RC. My first choice was W1JS but it went to someone who deserved it more than I, Jack Sheehy, ex-WA1ALM, aka "Old Buzzard Jack". I'm glad he got it.

Now that the waiting and the uncertainty is over I am curious to know more about the ham(s) who have held this call previously. Would those of you with old callbooks please do me a favor? Look up W1RC and let me know the name and address of the former holder and the year from which callbook the information was taken. I'd like to do some research on this.

I'm sure that many of you folks have gotten new calls and are as proud of hem as I am of mine. It makes all those hours studying for the Extra class license all worth it.

I saw Michael's message. I too received a new call, W7OO. I also would like to know the history of this call. If those of you with old call books could look mine up also I sure would appreciate it.

Thanks,

Bill
W7OO

I was digging through some of my amateur radio equipment and came across a Nye Viking Master Key (114-330-001). Is this a straight key that is worth keeping or considering selling? I am a Technician, so much of the CW type operations/terminology is somewhat new to me (brands and models etc.). I do plan on working my way up into the Extras class and am wondering if it is worth keeping?

Source record: 213373

I also am in limbo with the reply from the FCC that there are
inconsistancies between my paper application and what they
had on file. They report they will resolve these issues before going
to second day call assignments. I have three of my 25 choices
left.

My application was among the first day application. I've had
a number of people look at it and they found no errors. The data
on the application matches the original license grant.

Sucks to be in my spot as a mistake on the FCC's part in
entering my application could have cost me the chance for a
call.

- --- BEGIN Linux AX25 HOWTO part 2/2 ---

shell
this is the login shell of any new users.

associate
this flag indicates whether outgoing AX.25 connections made by
this user after they login will use their own callsign, or your
stations callsign.

14.5. Configuring the pms

The pms program is an implementation of a simple personal message system. It was originally written by Alan Cox. Dave Brown, N2RJT, <dcb@vectorbd.com> has taken on further development of it. At present it is still very simple, supporting only the ability to send mail to the owner of the system and to obtain some limited system information but Dave is working to expand its capability to make it more useful.

Configuring the pms program is still a little clumsy at the moment because it is new but bare with it while Dave works on it. The only difficult part is modifying the source code to support your local mail delivery agent and whether you use the ttylinkd program or the talk-ax25 program.

After that is done there are a couple of simple files that you should create that give users some information about the system and then you need to add appropriate entries into the ax25d.conf file so that connected users are presented with the PMS.

14.5.1. Customising pms.c

If you take a look at the pms.c file in the ax25-utils package you will see that there a few items that you can configure. Perhaps the most important to configure is the one that allows you to specify what local mail delivery agent you use. In most installations the deliver program may well work, but in the minimal installation on my gateway

machine I needed to modify the line that previously said:

#define MAIL_DELIVERY_AGENT "deliver %s"

to:

#define MAIL_DELIVERY_AGENT "/bin/mail.local %s"

There is no easy way of knowing what local delivery agent your machine is configured to use, so perhaps you could simply look for either of these files in the obvious places and choose whichever seems to be there.

I also have the ttylinkd program installed, so I needed to modify the section relating to it. I keep my copy of the ttylinkd program in my /usr/sbin directory, so I modified the line that previously said:

/* #define MY_TALK "/usr/local/sbin/ttylinkd" */

to:

#define MY_TALK "/usr/sbin/ttylinkd"

If you use the talk-ax25 program then you would remove the /* and */ from around that line instead.

There is one last definition that might be useful to you, and that is if you have a default email gateway. This line is the line containing the string MY_GATEWAY. If you have an email gateway that you use, then you should remove the comments from this line and change the address to that of your gateway.

14.5.2. Create the /usr/local/pms/motd file.

The /usr/local/pms/motd file contains the `message of the day' that users will be presented with after they connect and receive the usual BBS id header. The file is a simple text file, any text you include in this file will be sent to users.

14.5.3. Create the /usr/local/pms/info file.

The /usr/local/pms/info file is also a simple text file in which you would put more detailed information about your station or configuration. This file is presented to users in response to their issuing of the Info command from the PMS> prompt.

14.5.4. Associate AX.25 callsigns with system users.

When a connected user sends mail to an AX.25 callsign, the pms expects that callsign to be mapped, or associated with a real system user on your machine.

You make this association with the axparms command. An example looks like:

axparms -assoc vk2ktj terry

This command associates that AX.25 callsign vk2ktj with the user terry on the machine, so any mail for vk2ktj on the pms will be sent to terry.

Remember to put these associations into your rc file so that they are available each time your reboot.

14.5.5. Add the PMS to the /usr/local/etc/ax25d.conf file.

Adding the pms to your ax25d.conf file is very simple. There is one small thing you need to think about though. Dave has added command line arguments to the PMS to allow it to handle a number of different text end-of-line conventions. AX.25 and NetRom by convention expect the end-of-line to be carriage return, linefeed while the standard unix end-of-line is just newline. So, for example, if you wanted to add an entry that meant that the default action for a connection received on an AX.25 port is to start the PMS then you would add a line that looked something like:

default 1 10 5 100 5 0 root /usr/local/bin/pms pms -a -o vk2ktj

This simply runs the pms program, telling it that it is an AX.25 connection it is connected to and that the PMS owner is vk2ktj. Check the man page for what you should specify for other connection methods.
14.5.6. Test the PMS.

To test the PMS, you can try the following command from the command line:

/usr/local/bin/pms -u vk2ktj -o vk2ktj

Substitute your own callsign for mine and this will run the pms, telling it that it is to use the unix end-of-line convention, and that user logging in is vk2ktj. You can do all the things connected users can.

Additionally you might try getting some other node to connect to you to confirm that your ax25d.conf configuration works.

15. HOWTO link NOS and the Linux kernel networking software

Many people like to run some version of NOS under Linux because it has all of the features and facilities they are used to. Most of those people would also like to have the NOS running on their machine capable of talking to the Linux kernel so that they can offer some of the linux capabilities to radio users.

15.1. Linking NOS and Linux using a pipe device

Brandon S. Allbery, KF8NH, contributed the following information to explain how to interconnect the NOS running on a Linux machine with the kernel code using the Linux pipe device.

Since both Linux and NOS support the slip protocol it is possible to link the two together by creating a slip link. You could do this by using two serial ports with a loopback cable between them, but this

would be slow and costly. Linux provides a feature that many other Unix-like operating systems provide called `pipes'. These are special pseudo devices that look like a standard tty device to software but in fact loopback to another pipe device. To use these pipes the first program must open the master end of the pipe, and the open then the second program can open the slave end of the pipe. When both ends are open the programs can communicate with each other simply by writing characters to the pipes in the way they would if they were terminal devices.

To use this feature to connect the Linux Kernel and a copy of NOS, or some other program you first must choose a pipe device to use. You can find one by looking in your /dev directory. The master end of the pipes are named: ptyp[1-f] and the slave end of the pipes are known as: ttyp[1-f]. Remember they come in pairs, so if you select /dev/ptypf as your master end then you must use /dev/ttypf as the slave end.

Once you have chosen a pipe device pair to use you should allocate the master end to you linux kernel and the slave end to the NOS program, as the Linux kernel starts first and the master end of the pipe must be opened first. You must also remember that your Linux kernel must have a different IP address to your NOS, so you will need to allocate a unique address for it if you haven't already.

You configure the pipe just as if it were a serial device, so to create the slip link from your linux kernel you can use commands similar to the following:

```
# /sbin/slattach -s 38400 -p slip /dev/ptypf &
# /sbin/ifconfig sl0 broadcast 44.255.255.255 pointopoint 44.70.248.67 /
mtu 1536 44.70.4.88
# /sbin/route add 44.70.248.67 sl0
# /sbin/route add -net 44.0.0.0 gw 44.70.248.67
```

In this example the Linux kernel has been given IP address 44.70.4.88 and the NOS program is using IP address 44.70.248.67. The route command in the last line simply tells your linux kernel to route all datagrams for the amprnet via the slip link created by the slattach command. Normally you would put these commands into your /etc/rc.d/rc.inet2 file after all your other network configuration is complete so that the slip link is created automatically when you reboot. Note: there is no advantage in using cslip instead of slip as it actually reduces performance because the link is only a virtual one and occurs fast enough that having to compress the headers first takes longer than transmitting the uncompressed datagram.

To configure the NOS end of the link you could try the following:

```
# you can call the interface anything you want; I use "linux" for convenience.
attach asy ttypf - slip linux 1024 1024 38400
route addprivate 44.70.4.88 linux
```

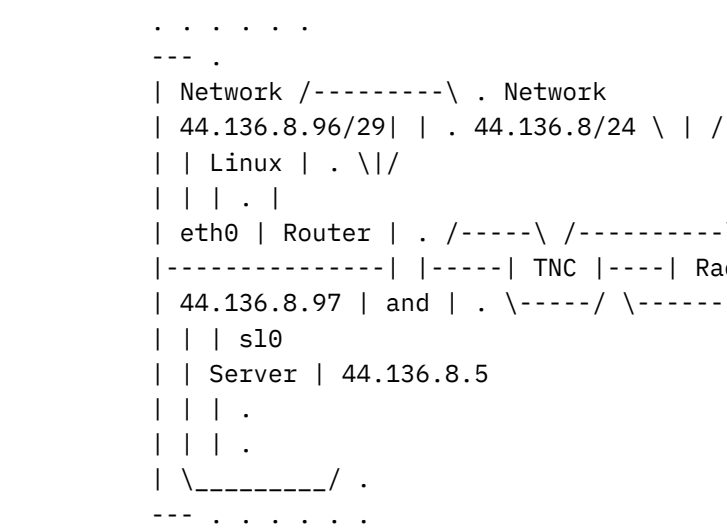
These commands will create a slip port named `linux' via the slave end of the pipe device pair to your linux kernel, and a route to it to make it work. When you have started NOS you should be able to ping and telnet to your NOS from your Linux machine and vice versa. If not, double check that you have made no mistakes especially that you have the addresses configured properly and have the pipe devices around the right way.

16. Some sample configurations.

Following are examples of the most common types of configurations. These are guides only as there are as many ways of configuring your network as there are networks to configure, but they may give you a start.

16.1. Small Ethernet LAN with Linux as a router to Radio LAN

Many of you may have small local area networks at home and want to connect the machines on that network to your local radio LAN. This is the type of configuration I use at home. I arranged to have a suitable block of addresses allocated to me that I could capture in a single route for convenience and I use these on my Ethernet LAN. Your local IP coordinator will assist you in doing this if you want to try it as well. The addresses for the Ethernet LAN form a subset of the radio LAN addresses. The following configuration is the actual one for my linux router on my network at home:



```
#!/bin/sh
# /etc/rc.net
# This configuration provides one KISS based AX.25 port and one
# Ethernet device.

echo "/etc/rc.net"
echo " Configuring:"

echo -n " loopback:"
/sbin/ifconfig lo 127.0.0.1
/sbin/route add 127.0.0.1
```

```
echo " done."

echo -n " ethernet:"
/sbin/ifconfig eth0 44.136.8.97 netmask 255.255.255.248 \
broadcast 44.136.8.103 up
/sbin/route add 44.136.8.97 eth0
/sbin/route add -net 44.136.8.96 netmask 255.255.255.248 eth0
echo " done."

echo -n " AX.25: "
axattach -i 44.136.8.5 -m 512 /dev/ttyS1 4800
ifconfig sl0 netmask 255.255.255.0 broadcast 44.136.8.255
route add -host 44.136.8.5 sl0
route add -net 44.136.8.0 window 1024 sl0

echo -n " Netrom: "
nrattach -i 44.136.8.5 netrom

echo " Routing:"
/sbin/route add default gw 44.136.8.68 window 1024 sl0
echo " default route."
echo done.

# end

/usr/local/etc/axports

# name callsign speed paclen window description

netrom VK2KTJ-1 LINUX 235 Linux Switch Port

/usr/local/etc/nrbroadcast

# ax25_name min_obs def_qual worst_qual verbose
4800 1 120 10 1
```

• You must have IP_FORWARDING enabled in your kernel.

• The AX.25 configuration files are pretty much those used as examples in the earlier sections, refer to those where necessary.

• I've chosen to use an IP address for my radio port that is not within my home network block. I needn't have done so, I could have easily used 44.136.8.97 for that port too.

• 44.136.8.68 is my local IPIP encapsulated gateway and hence is where I point my default route.

• Each of the machines on my Ethernet network have a route:

```
route add -net 44.0.0.0 gw 44.136.8.97 window 512 mss 512 eth0
```

The use of the mss and window parameters means that I can get optimum performance from both local Ethernet and radio based connections.

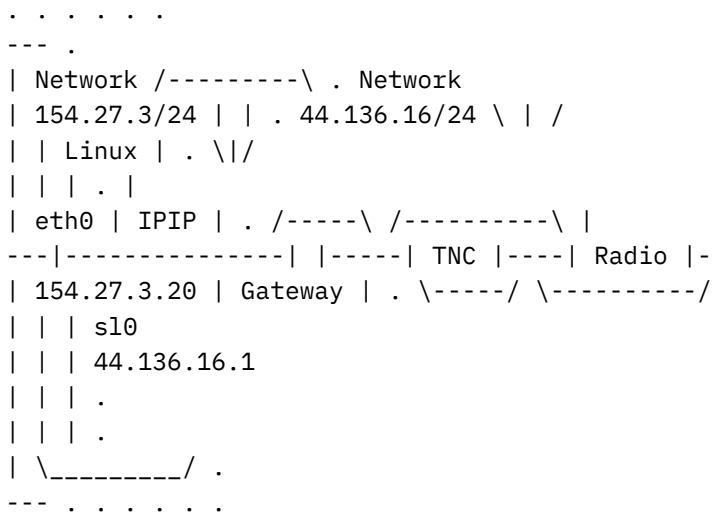
• I also run my sendmail, http, ftp and other daemons on the router machine so that it needs to be the only machine to provide others with facilities.

• The router machine is a lowly 386DX20 with a 20Mb harddrive and a very minimal linux configuration.

16.2. IPIP encapsulated gateway configuration.

Linux is now very commonly used for tcp/ip encapsulated gateways around the world. The new tunnel driver supports multiple encapsulated routes and makes the older ipip daemon obsolete.

A typical configuration would look similar to the following.



The configuration files of interest are:

```
# /etc/rc.net
# This file is a simple configuration that provides one KISS AX.25
# radio port, one Ethernet device, and utilises the kernel tunnel driver
# to perform the IPIP encapsulation/decapsulation
#
echo "/etc/rc.net"
echo " Configuring:"
#
echo -n " loopback:"
/sbin/ifconfig lo 127.0.0.1
/sbin/route add 127.0.0.1
echo " done."
#
echo -n " ethernet:"
/sbin/ifconfig eth0 154.27.3.20 netmask 255.255.255.0 \
broadcast 154.27.3.255 up
/sbin/route add 154.27.3.20 eth0
/sbin/route add -net 154.27.3.0 netmask 255.255.255.0 eth0
```

```
echo " done."
#
echo -n " AX.25: "
axattach -i 44.136.16.1 -m 512 /dev/ttyS1 4800
/sbin/ifconfig sl0 netmask 255.255.255.0 broadcast 44.136.16.255
/sbin/route add -host 44.136.16.1 sl0
/sbin/route add -net 44.136.16.0 netmask 255.255.255.0 window 1024 sl0
#
echo -n " tunnel:"
/sbin/ifconfig tunl0 44.136.16.1 mtu 512 up
#
echo done.
#
echo -n "Routing ... "
source /etc/ipip.routes
echo done.
#
# end.
```

and:

```
# /etc/ipip.routes
# This file is generated using the munge script
#
/sbin/route add 44.134.8.0 netmask 255.255.255.0 tunl0 gw 134.43.26.1
/sbin/route add 44.34.9.0 netmask 255.255.255.0 tunl0 gw 174.84.6.17
/sbin/route add 44.13.28.0 netmask 255.255.255.0 tunl0 gw 212.37.126.3
...
...
...
```

```
/usr/local/etc/axports

# name callsign speed paclen window description
4800 VK2KTJ-0 4800 256 2 144.800 MHz
```

Some points to note here are:

- The new tunnel driver uses the gw field in the routing table in place of the pointopoint parameter to specify the address of the remote IPIP gateway. This is why it now supports multiple routes per interface.

- You can configure two network devices with the same address. In this example both the sl0 and the tunl0 devices have been configured with the IP address of the radio port. This is done so that the remote gateway sees the correct address from your gateway in encapsulated datagrams sent to it.

- The route commands used to specify the encapsulated routes can be automatically generated by a modified version of the munge script. This is included below. The route commands would then be written to

a separate file and read in using the bash source /etc/ipip.routes
command (assuming you called the file with the routing commands
/etc/ipip.routes) as illustrated. The source file must be in the
NOS route command format.

• Note the use of the window argument on the route command. Setting
this parameter to an appropriate value improves the performance of
your radio link.

The new tunnel-munge script:

```
#!/bin/sh
#
# From: Ron Atkinson <n8fow@hamgate.cc.wayne.edu>
#
# This script is basically the 'munge' script written by Bdale N3EUA
# for the IPIP daemon and is modified by Ron Atkinson N8FOW. It's
# purpose is to convert a KA9Q NOS format gateways route file
# (usually called 'encap.txt') into a Linux routing table format
# for the IP tunnel driver.
#
# Usage: Gateway file on stdin, Linux route format file on stdout.
# eg. tunnel-munge < encap.txt > ampr-routes
#
# NOTE: Before you use this script be sure to check or change the
# following items:
#
# 1) Change the 'Local routes' and 'Misc user routes' sections
# to routes that apply to your own area (remove mine please!)
# 2) On the fgrep line be sure to change the IP address to YOUR
# gateway Internet address. Failure to do so will cause serious
# routing loops.
# 3) The default interface name is 'tunl0'. Make sure this is
# correct for your system.

echo "#"
echo "# IP tunnel route table built by $LOGNAME on `date`"
echo "# by tunnel-munge script v960307."

17. Discussion relating to Amateur Radio and Linux.

There are various places that discussion relating to Amateur Radio and Linux take place. They take place in the comp.os.linux.* newsgroups, they also take place on the HAMS list on vger.rutgers.edu. Other places where they are held include the tcp-group mailing list at ucsd.edu (the home of amateur radio tcp/ip discussions), and you might also try the #linpeople channel on the linuxnet irc network.

To join the Linux linux-hams channel on the mail list server, send mail to:

Majordomo@vger.rutgers.edu

with the line:

subscribe linux-hams

in the message body. The subject line is ignored.

To join the tcp-group send mail to:

listserver@ucsd.edu

with the line:
subscribe tcp-group

in the body of the text.

Note: Please remember that the tcp-group is primarily for discussion of the use of advanced protocols, of which tcp/ip is one, in Amateur Radio. Linux specific questions should not ordinarily go there.

No studying in that the contents of your TNC manual were not on the
Technician, General or other ham radio test. I don't even remember if
there is a question on EME on one of the tests (maybe one that goes "do
you have to point your antenna at the moon to make a contact" or
something line that.

CW requires studying and it is on the exam for an Amateur Radio license
Novice on up. That is a fact-period. Statement supported in full!

"Psycho ceramics"? That is your term Jake. I am commenting only on the contents of his website and have no interest in biographical data or his motivations. If that data is relevant, then it is up to him to publicize it.

>are proven facts (few, if any, studies show conclusively that non-
>thermal effects of RF are dangerous).

I will repeat again:

1) The FCC specifications are based on IEEE C95.1, for all practical purposes.

2) IEEE C95.1 is based on hard science. Please indicate which clause in ANSI/IEEE C95.1 -1992 1992 that reveals A) any relationship to risk-risk reduction, or B) any basis for non-thermal effects. If you can refer me to the clause or page, I will look it up in my copy of the standard and retract my statement and agree with you. However, I know that you cannot. The whole concept of SAR is based on tissue heating and how that relates to observed biological effects on animals. This does not involve speculative, hypothetical effects such as cancer.

>Further the FCC expects that RF exposure suits and handheld readers
>are useful items. In reality they can't measure anything with accuracy
>that a true safety engineer can use.

Actually, FCC is encouraging the development of software tools that
can be used in lieu of physical measurements. Already, some freeware
is available (try nf.exe for approximations near field calculations).

>This isn't just my opinion, these are the opinions of many who wrote
>to the FCC in the latest report and order of 93-62 (96-326). Yes, I

>worst. If you don't believe me, read the Joint Seperate Statement by
>Chairs Chong and Quello. Read it carefully, and then ask yourselves
>why they'd say a thing like that...

Yes, there are political disagreements with all legislation. That is a
fact of life. In fact, this points out that the FCC was rushed into
the report and order as a result of an arbitrary timetable contained
within the legislation that mandated the FCC to make the ruling. I
wonder if you or Mr. Varanelli could have written a better report and
order given the unrealistically short timetable. As it is, the FCC
simply chose a current version of what had previously been adopted as
an American National Standard as the basis for compliance. Very safe
thing to do. Sort of like the Consumer Product Safety Commission
choosing ANSI/UL1950 as the basis for safety of personal computers if
Congress were to direct them to enact a ruling on PC safety. Pretty
'safe' way to go. Where do you come up with this "scientifically
unsound" stuff...ANSI/IEEE C95.1 has been fairly well accepted already
by the scientific community.

>no-code technicians? Hypocrisy sucks!

Surely you must see the difference between a pair of no-code techs who support code requirements for higher class privs and a whiner demanding to be a no-code extra.

Where is the hypocracy in that? The point is that I have never asked for anything from the FCC that I wasn't willing to work for according to the rules. Do you hear me asking for HF privs? No, you don't. And you won't until I've earned them. (And of course I won't be asking then, I'll be using them.)

Maybe you should open a copy of Webster's before you use words you don't know how to define.

Well, the Feds finally came through with the old timer call signs some of us have been waiting for. I didn't mind the wait - I am glad I am able to get one of these great old calls that have been silent for many years. It only seems fitting that they be reissued so they can once again be alive and in use on the air instead of dormant in some bureatcratic file cabinet.

I got my second choice. Its W1RC. My first choice was W1JS but it went to someone who deserved it more than I, Jack Sheehy, ex-WA1ALM, aka "Old Buzzard Jack". I'm glad he got it.

Now that the waiting and the uncertainty is over I am curious to know more about the ham(s) who have held this call previously. Would those of you with old callbooks please do me a favor? Look up W1RC and let me know the name and address of the former holder and the year from which callbook the information was taken. I'd like to do some research on this.

I'm sure that many of you folks have gotten new calls and are as proud of them as I am of mine. It makes all those hours studying for the Extra class license all worth it.

73,

Michael

Sorry if this is a FAQ.....

I'd like to build an automatic voice IDer to either run a fox
transmitter or to call CQ on 2m FM simplex/SSB. I looked up the
article in QST from April 95, but would rather have something
utilizing the Radio Shack voice chips. Pointers to other resources
(esp. those on the net) would be nice.

E-mail copies of responses appreciated.

I leave in Eagle Rock and always used the MARS repeater using high
power mobile rig. Lately I can't even make a call. You people are the
ones who are suppose to go to 222 MHz because those people got their
first. I too got intimimated with that QST, gave a call to one of MARS
people, it's phony. I wouldn't even give a damn to SCARA or whoever in
that Santiago Peak group. Oh well, Mr. Dengler, KE6TZF is Sunset Ridge
Repeater group. You're one of those people jamming. I was wondering
may be you people are getting a lot high power RF's being radiated
right in your head like those guys at 147.435? If you've been using
MARS 446.650, would this mess will make you happy? I should say 73 but
don't which is appropriate this time. May be KJ6TQ would no better...

326. Where to find spectrum allocation for various countries?

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-06 00:00:00 UTC
From: tomio@ai.mew.co.jp
Message-ID: <55pgl5$pn9@hosaku.mew.co.jp>
Source record: 213417

Hi all,

This is a bit off the subject so I'll keep it short...

I'm trying to integrate wireless modems into
a camera and video-switcher control project I put together.
The location is Japan and so I need to go puruse whatever
documentation exists about legal radio frequencies. Seems
like most RS-232 transceivers now are in the 900 MHz
and 2.4 GHz range, both of which are fine for use in the U.S.
However, I've heard that 900 MHz is illegal in Japan while
2.4 GHz is okay, and I'd like to check this for myself.

Can anyone point me to a suitable FAQ or archive which
would contain information about spectrum allocation around
the world, particularly in Japan? English preferred but I
can wade through Japanese if necessary.

Please e-mail any ideas directly to me at:

tomio@ai.mew.co.jp

Thanks!!

Well,

In the Spring of 1963 CallBook W1RC is:

Ralph J. Cowie
19 Eliot Rd.
Arlington 74, Mass.

(Don't you just love those old zone numbers.....:-)

I hope that helps. I just got my call back from the early 60's
myself (I'm in the same Callbook).

I think it's interesting to note that approximately 3700 calls were issued when 4500 day one apps were acknowledged as received. There must have been about 800 that bounced for one reason or the other

It was interesting to look through the day 1 vanity calls. One thing
that really surprised me was that one west coast club grabbed 11 (!)
vanity call signs. They are all assigned to the same club/trustee.
That seems, on the face of it, pretty outrageous. I didn't realize that
clubs could obtain multiple club callsigns.

Something strange may be going on indeed! I was checking the data base and noticed that club station below was issued the following callsigns: WR6J, K6HF, AE6QC, AE6J, K6TT, W2JR, W5JR, N2CW, W6JR, W6USA. That's a total of 10 Vanity calls, in at least 3 different call areas. If the computer malfunctioned, it's quite possible that some hams got "skunked" as a result. Unless it's possible for a club station to hold 10 different call signs, there may be some problem here.

: receive-only antenna, and a poor receiver at that.
:
: I also own the longer NCG/Comet SMA-3, which you did not mention. It
: is the best SMA duck I have thus far encountered. It far outperforms
: the Yaesu FT-50R's stock rubber duck, both on transmit and on receive.
: I highly recommend it.
:

I replaced my stock FT-50R's stock rubber duck with the ICOM FA-S270A,
which is a replacement antenna for the ICOM T21A. My main concern was how
tall the stock antenna was. I was looking for something smaller to make
the radio less conspicuous and generally easier to deal with. Most of my
repeater work is close in and I have no problem hitting them. The
FA-S270A is about half the size of the stock FT-50R antenna, and even
though I have done no testing with any meters (sorry, I am still
relatively new to all this) I can say that I have noticed very little
difference in TX or RX. I got it from HRO and I remember it costing
around $24.

Good luck and 73's...

I had one or two "first choices" and the rest were calls I liked and would make good CW calls, and I would have been more than happy with any of them.
I submitted 15 choices and was issued the 12th on my list.
That's 11 out of 15 misses. I think that was cutting it kind of close, and if I had it to do over again, would have submitted all 25 just to play it safe. I had no idea there would be THAT many people competing for such a few calls.

Whew!

Hi,

The S meter reading of the crystal calibrator at the 200 position on
the VFO is 6 S units lower than at the 0 position of the VFO even
though it is peaked with the tuning control.
This also carries over to transmitting where I can't get output at the
200 position on the VFO. This is true on all bands.

Looking at the database files, each callsign being changed is different.
So, I very much doubt that this was a computer malfunction. Somehow, the
club held 11 (by my count) different calls that received new vanity
replacement calls. Just seems very weird. I, too, didn't think that
the same club/trustee could hold multiple callsigns.

This is a just a friendly reminder to keep your dedicated Elmers List maintainer informed of any changes to your entry, not the least of which, any changes to your amateur radio callsign (MARS and DX callsigns also).

Yes, in principle, I could compare what I have against the callbook records, but this would be just a bit too much maintenance work, both initial and ongoing, for my taste. Besides, I'd like to encourage individual Elmers to take responsibility for the accuracy of their own entries and assure me that they are paying attention to keeping them up to date.

You refer to Mr. Varanelli as "off the deep end" and then you suggest
that I started that line of thinking? Mr. Varanelli is trying to show
that the standards are absurd. Although I agree with him, I feel that
he is not making the best case by citing the examples he does.

No, it is not. It is based on the NCRP standards which are
bureacratically modified (see the exposure time limits, for example)
from the IEEE C95.1 standards.

>
> 2) IEEE C95.1 is based on hard science. Please indicate which clause

> as cancer.

The NCRP standards do several inexplicable things: First they modified
the general public (uncontrolled) time exposure limits. This table of
exposure limits look nothing like ANSI C95.1. Mr Varanelli had at
one time, linked his web pages to comments made by the chair of the
NCRP standard committee, who said in effect that the committee didn't
know what it was doing and to use the ANSI standards instead. NCRP is
not an industry representative. It is a committee appointed by
Congress. They were not technically oriented, and they did not have the
scientific background that the ANSI folks did.

Software modeling tools are not accurate predictors in every situation.
Many installations, such as mobile and restricted space antennas can't
be easily modeled. Just ask the authors of MiniNEC...

How about this one:

AB0ZO BOZO AMATEUR RADIO FRATERNITY, KAUKAUNA WI

And if you are looking for a _really cool_ call, how about this one:

K0OL HAUSE, DAREN W, COMMERCE CITY, CO

Or:

K0OP KOOP, KEITH L, WICHITA KS
K0VAR KOVAR, JACK L, TODDVILLE IA
KN0TT KNOTT, ISAIAH H, MONTROSE CO
KE1TH BRANSKY, KEITH M, MARIETTA GA

Or how about this one:

N0NE DX RADIO CLUB, ROCHESTER WA

In the callsign section, this license will say: none.

Here'a a fun one:

K6FUN KARNES, THOMAS E, SAN FRANCISCO CA

What do you get when you cross a pig and a dog:

K9HAM LEWIS AND CLARK RADIO CLUB,GODFREY IL

These guys really want you to know they are from Kentucky:

KY4KY BULLITT AMATEUR RADIO SOCIETY. SHEPHERDSVILLE KY

Hmmm....:

W4XXX TIDEWATER MORSE CODE SOCIETY, VIRGINIA BEACH VA
W6XXX GAMMA EPSILON KAPPA GROUP, BERKELEY CA

Wanna catch some waves, dude!:

W6AVE SURFERS UNITED RADIO FEDERATION, SANTA MONICA CA

This one's got this guy's initials TWICE!

WW5WW WILLIAMS, WILLIAM J, GAINESVILLE TX

How about some fruit:

K1WI FENICK, ANDREW L, CHARLESTOWN RI

And here's a few more interesting ones:

W6MTR SOUTHERN CALIFORNIA SIX METER CLUB AUXILIA LA MIRADA, CA
AC2DC ELECTRONIC TECHNOLOGIST EXPERIMENTERS CLUB LOUISVILLE, KY
W1RE EDRY, ROBERT A, SALEM NH
W1SH SWIFT, DANIEL M, PLANO TX

Whew. Anybody else see some good ones?!

Here's the one I hope to get (but haven't yet because I submitted on Oct 9):

N7LN -- turn it upside down and read it!

C ya,

Darvell (KE7GW -- hoping to be N7LN)

I'd bet a small sum that this fella' sent in MULTIPLE 610V applications instead of selecting all his favorites and listing 25 of them on a single application. Perhaps he would have increased his chances that way. If this is the case, the FCC should remand every call issued to him/"club." I also wouldn't be surprised if his was a "club" in name only.

> >Something strange may be going on indeed! I was checking the data

If you see on the FCC's site that you have a new call, can
you use that new call even if you haven't physically recieved
your ticket in the mail yet? Or do you have to wait _another_
week for the good ol' USPS?!

Don't forget: W6GS and W6HF, also issued to trustee James Roach, KD6VWK.

If you want more fun (?) check out the 37 club calls assigned to various members of the Tucker family in La Mirada, CA 90638. So far, I was able to count at least 25 new vanity calls issued to this family in the first day of Gate 2! Even the Primary Station callsigns smack of impropriety: AA6ET (Eric Tucker), AA6TK (Kathryn Tucker), AA6KT (Kent Tucker). Of course Roy Tucker, N6TK, probably got his call back in the last vanity program in the 70's...but how do you explain the AA6 calls??? And take a look at some of the "club" names!

The search databases ought to be up-to-date soon so we can do a "search by name" ("Tucker in La Mirada" or "Roach in San Juan Capistrano") and see just how greedy these people have been with their vanity requests.

Perhaps these are multiple-repeater calls, or other "legitimate" uses, but can anyone see a need for all these vanity callsigns to be roped-in by so few? Anyone know these Tuckers and what they are up to?

Bill, WA9NHQ

Here's a few more good ones:

W0MIK OMIK AMAT ELECTRONIC COMMUNICATIONS ASSN I SAINT LOUIS, MO

(OMIK is the first initials of the four home states of the founders)

K0IL EDWARDS, EDDIE J FORT CALHOUN, NE

(KOIL is an AM radio station in nearby Omaha)

AC2DC ELECTRONIC TECHNOLOGIST EXPERIMENTERS CLUB LOUISVILLE, KY

(If you don't get this one, turn in your license! I'm sure the
club is please to have their vanity callsign "rectified" :-)

KY2FU STORM CLOSED REPEATER CLUB SYSTEM HOPATCONG, NJ

(is some sort of metaphor implied with the above call? :-)

This call is definitely "In the Zone:"

KZ5DX STEINMAN AMATEUR RADIO CLUB DALLAS, TX

Gates 1 and 2 also offered the opportunity for a couple of college clubs
to regain their old pre-FCC (and even pre-W prefix) Department of
Commerce Special Land Station callsigns:

W3YI UNIVERSITY OF PITTSBURGH AMT RAD ASSN PITTSBURGH, PA
W6YV UNIV OF SO CA AMAT RADIO CLUB TORRANCE, CA

(distinguished by their two-letter suffixes starting with "Y")

Though I'm disappointed at the loss of military recreation stations over
the years, and the shutting out of such applicants from the vanity
system, I can at least take comfort that many of the USA and USN calls
live again, sometimes as club calls, for veteran and/or patriotic hams,
such as:

K3USA APPLEGATE, DANIEL J MURRYSVILLE, PA
K4USA OHLMAN, DOUGLAS R BOCA RATON, FL
K9USA IVESDALE RADIO CLUB IVESDALE, IL
KK6USA PATRIOTIC AMATEUR RADIO CLUB LA MIRADA, CA
W1USA BARES, GREGORY R NEWINGTON, CT
W3USA MOBILE EMERGENCY COMMUNICATIONS CLUB DARIEN, CT
W4USA MYERS SR, DAVID C GAINESVILLE, FL
W7USA SARA, RAYMOND P PHOENIX, AZ
W9USA ILLINOIS HISTORICAL RADIO SOCIETY ROSCOE, IL
W6USA ORTEGA WIRELESS LEAGUE SAN JUAN CAPISTRANO, CA
WW6USA PATRIOTIC AMATEUR RADIO CLUB AUXILIARY LA MIRADA, CA

W8USA MICHIGAN AMATEUR RADIO ALLIANCE COMSTOCK PARK, MI
K7USA PLUM HILL CONTEST CLUB BEAVERCREEK, OR
W0USA BELL, JERRY D BLOOMINGTON, MN

(K0USA was retrieved by the Aksarben ARC in Omaha, Nebraska under Gate 1.)

K7USN ROBERTS, LIONA R NEW HARMONY, UT
K9USN CLUSEN, GERALD W NEW LONDON, WI
W1USN RIOUX, MICHAEL P BOXFORD, MA

No K[0-9]AIR calls, though (K0AIR was at HQ SAC, Offutt AFB, Nebraska in 1963).

And the [WK]3USA calls were both assigned to Fort Meade, Maryland as recently as 1990, *sigh!*.

I can't tell you about the RF limits in a service station off the top of my head. However the RF from a 600mW cellphone should not cause any trouble as long as you don't have a damaged antenna, etc.

The real safety problem with portable radios is the batteries, buttons, switches. When working in a possibly explosive environment you should have certified "intrinsically safe" radio. Certification applies to the radio, antenna, battery, and accessories such as speaker mics. For refining environments we buy certified two-ways (trunked and conventional), pagers, and cellphones.

MOST cellphones are not intrinsically safe. For hazardous areas we use the Motorola "brick type" cellphones like the "Slim Line III" that are I.S. To my knowledge, none of the Motorola flip phones are certified.

I am not sure what organization certifies radios in NZ. Most of the US certification of intrisically safe radios is done by "Factory Mutual".

Looks like the problem might be VFO out put. It remains level at about
1.5v rf from 0 to 100 on the dial and then drops gradually to 1v at
200 on the dial. Wonder how one fixes this?

Conrad

Don't all of the other methods you mention require some learning as
well?

And I would beg to differ on your "they could" assumption. They can't.
CBers CAN'T use satellites, packet, repeaters, etc. In fact - they
can't use CW either. None of it is legal on CB. So there is more of a
difference between CB and Amateur radio than CW.

No mistake. They are all different "Club Calls". The 4th column
in the appl.dat is for type_applicant, the "C" stands for Club.

I have the same problem as Arden: didn't get anything on day 1, yet
some of my 25 choices were still left!

SO I just called the FCC (1-800-322-1117) and asked what happened to
my app. It DID arrive on the first day, but they said it was WIP-ped.

(Groan...)

As the operator explained, that means my app had something
wrong with it and they could not process it. Considering I quadruple
checked my app (fearing this sort of thing) I find that quite
surprising. She said that she could not tell what the problem was, but
that they would send me a letter within 10 days explaining the problem.
Or they may 'figure out' some missing info themselves and just
re-submit my app.

Needless to say I am now sunk as far as getting a decent 2-letter call
goes. Considering they had my app for 45 days defore they started
processing calls I wish they would have contacted me earlier
(by mail or the phone # on the app) so that any problems could have
fixed before calls were issued.

Well, the Feds finally came through with the old timer call signs some of us have been waiting for. I didn't mind the wait - I am glad I am able to get one of these great old calls that have been silent for many years. It only seems fitting that they be reissued so they can once again be alive and in use on the air instead of dormant in some bureatcratic file cabinet.

I got my second choice. Its W1RC. My first choice was W1JS but it went to someone who deserved it more than I, Jack Sheehy, ex-WA1ALM, aka "Old Buzzard Jack". I'm glad he got it.

Now that the waiting and the uncertainty is over I am curious to know more about the ham(s) who have held this call previously. Would those of you with old callbooks please do me a favor? Look up W1RC and let me know the name and address of the former holder and the year from which callbook the information was taken. I'd like to do some research on this.

I'm sure that many of you folks have gotten new calls and are as proud of them as I am of mine. It makes all those hours studying for the Extra class license all worth it.

73,

Michael

365. Many left out on vanity calls

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-06 00:00:00 UTC
From: thompson@atl.mindspring.com
Message-ID: <55r6n4$244@camel2.mindspring.com>
Source record: 213456

I have had several messages from hams in the 4th district that they did not get a vanity call. Even tho I am not changing my call I personally helped two hams (both listed 25 call signs) and neither got a call. There applications were received and logged as day 1.

Does anybody know if these poor guys have to send another $30 with a second request (they will use 610V electronic) or can they use the first fee?

Also I went thru the calls they listed and all appear on Shadow Software's list of available calls. However, one had 2 calls that are still not lisred and the other had one call still unlisted. Is there a way to see if these are reserved by the FCC? I saw another post on this same point.

Also I looked thru the un zipped FCC data..is there a list of hams that did not get a call and must re-submit?

In article <32751CD2.4C0B@ccm.ch.intel.com>, From Cecil Moore
<Cecil_A_Moore@ccm.ch.intel.com>, the following was written:
> IF I can use digital modes in the novice CW portions,
> then why can't they? It just doesn't make any sense at all.

The novice CW subbands on 80, 40, and 10 meters are just that--CW. The
idea was to give them a place to practice the skills required to upgrade
to general, not a permanent home. Of course years ago it was up-or-out
after a year for a Novice. I imagine many folks upgraded to Technician
(Tech Plus today) as a way to keep their ticket. While the higher class
hams can operate digital on 7.105, the Novice/Tech Plus cannot.

Anyone checking the FCC ftp server (/pub/XFS_AlphaTest/amateur) and
reading the readme.txt file will discover that the FCC database is
running on Sybase. While Sybase runs on many hardware platforms, it does
not run on many that I would characterize as obsolete. Chances are that
it is some rather common Unix box such as a Sun or HP.

However, you seem to be assuming that whatever problem they had was
hardware-releated. It could be that, but it could also have been a
software or network problem. The original poster seems to believe that
the FCC amateur radio database is as mission-critical as a 911 system.
That's hardly the case, nor should it be (unless getting your vanity
call is a life and death matter).

That's why the FCC placed the two-year waiting period between release
and reissue.

>You have no choice of what mode to operate. If you want to send a message
>via radio to some areas under certian conditions then YOU MUST USE CW.
>This is a problem with NATURE.

Another major reason is that with the tons of US hams running the legal
limit on Phone, there is no way to compete with them with 100 watts and
a vertical antenna. On CW however, even with a tiny signal, DX stations
tend to favor the little guy thinking that it is DX too. I experience
this all the time.

No, all branches of the Federal Government have been spending too much money since the Viet Nam War. We have been spending more than we have been collecting in taxes. When that happens, either you raise taxes (unpopular) or you cut spending (also unpopular.) But the Federal Government sees even an easier way out! Hey, let the states foot the bill. I've got news for you: they're in a bind too (listening Bill Clinton?) The states are going to pass it on to the cities and the cities, who are also in terrible shape (read the newspapers) are going to pass it to whom?

What is YOUR solution?

This great little rig is in like-new condition. It has the 1.8MHz-30MHz all-band transmit mod, and puts out a solid 130-140 W! Has original box, power cable, mic, manual, and mounting bracket. I'm only selling because I picked up a Kenwood TS-690 and don't need both! $700 plus shipping--the same price I paid 4 months ago. I don't think you'll find a nicer little HF rig.

Try to determine if the noise is radiated or conducted. You can disconnect the coax from the radio to check for radiated. It would be difficult to test for conducted while the car is moving. If it has an engine controlled computer, I would suspect it as the source.

Excuse me for posting in your group - I'm not a ham - My hobby is amateur theatre - maybe one of you can help with a problem I have.

Doing a play in a week or so in Ealing at Questors Theatre - called The Journalists (by Arnold Wesker) set in the offices of a newspaper in 1970

Calls for messages to arrive on a 'telex' - means any ancient output device which prints onto paper - Cannot find anything like a KSR33 or similar anywhere - (thought could send any old characters from a PC via RS232 output - but no printer) - has anybody in SE U.K. got anything which would work?

> I didn't get W7CW, then at least *Someone* should. Or did I just miss
> it?

My 1995 Callbook shows:

W7CW SIMON E HESS Class: Advanced
6540 CHICO WAY NW Birthday: Sep 8, 1912
BREMERTON, WA 98312 Expiration: Sep 9, 1996
County: Kitsap Licensed: Before Mar 81

If he is indeed now SK, then the required 24 months lapse has not
expired. You might ask the FCC exactly when the license lapsed and
then you may re-apply on the second aniversary. Maybe the LDS's will
accept your old new call for say a club station.

>
> Arden,
> still KI7FG (I think)

Arden: Don't forget that a call sign has to have been vacated for at least two years to be eligible for re-issue. I would assume that if two of your selections are still unassigned it's because they've been vacated less than two years. At least this would be my guess.

I submitted 15 calls and received a "hit" on the 12. I just entered calls that I liked that were not listed in the ham databases, but still had no way of knowing if they were available for reissue yet. I came really close to not getting one at all.

You didn't get W7CW because its not available. A call sign has to be vacant for two years before you can request it as a vanity call. W7CW was issued in September of 1986, so if it wasn't renewed, it still will not be available as a vanity call until September of 1998.

Lots of people probably didn't get the call they requested because they most likely just checked to see if the call was vacant NOW, without checking to see if it has been vacant for the last two years.

This PIN diode is used as an RF switch, not a rectifier. It's
forward biased to close the switch. Now, even though the level of
RF voltage may be such that the diode is reverse biased for part of
the RF period, you don't want the diode to block. Hence, the
storage time must be (much) greater than half an RF period.

Another key spec of PIN diodes used as RF switches is the junction
capacitance in the off-state, which should be suitably low.

404. POLL: Should Clubs be allowed to get Vanity Calls?

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-07 00:00:00 UTC
From: "Thomas J. Alessi" <Tom@Alessi.Com>
Message-ID: <3281E39F.4DC3@Alessi.Com>
Source record: 213268

After looking at the first day Gate 2 data, I'd like to take an informal
Poll regarding Vanity Calls for club stations. Here it is a 2 parter...

* Should clubs be allowed to have vanity calls? Should they be
allowed
to hold multiple Vanity Calls???

(There appear to be 2 schools of thought here as I see it.)

A. No, because they then monopolize a call basicly forever.

**** OR ****

B. Yes, because it allows many people in that club to use
a good call at a club station and during contests.

I am torn on this on. There are now a lot of good calls that will
probably never be released again because they are now assigned to a
club station. Some of these clubs are highly questionable too.
3 or 4 guys get together, start a "CLUB", Glom up 5 or 10 1x2 calls.
Now, guess what, they have their own private cashe of calls to use or
swap from any time they want. ***If they don't like their present call,
they release one of the other club calls and immediately apply for that
call for themself. And apply for their call as a club call.
In essence, a swap.

I don't know, sounds like there's gonna be a lot of behind the scene
deals going on. "Hey bud, Pssss comm'ere. Want to buy a cool 1x2 !"

What do you think?

I'd bet a small sum that his "club" applied for multiple call signs on separate 610V applications with an intent to "increase his odds" by purchasing more "lottery tickets." Perhaps the FCC should have instituted a "one per customer rule" in order to avoid these situations. Under these circumstances, should the Commission allow him to keep any of the calls signs?

Is it against the FCC's rules and procedures to file simultaneous, multiple applications?

Maybe you should learn to spell the word you say I don't know
how to use.
All this whining and bitching and putting other people down
because they don't fit your idea of the perfect ham operator has
caused quite a few people I know to forget about getting their license
(the same whining goes on here in Sacramento on HF and on the local
repeaters). Maybe you should live and let live and leave other people
alone. Remember, coded licensees have been every bit as guilty as
no-code techs when it comes to jamming and other "CB behavior".

Hiya W7LDS
I'm an interested newbie in Ontario Canada going for my no-code.
I have been given the appointment (LDS) of Emergency Radio Specialist,and
the only thing that I'm really good at is designing quad antennae,so I am
studying and would like to get some help on radio selection for these bands.
Being a disgruntled ex-cb'er I am highly interested in equipment for 6m.
I am a member of the Stoney Creek ward near Hamilton Ontario.
Thanks in advance
Fred

I nominate the Tucker family (N6TK, AA6TK, AA6KT, and AA6ET)
of La Mirada, CA as radio-philanthropists of the year for
their unselfish support of the FCC to the tune of at least
$960.00 in vanity call fees.

On "Day 1" of Gate 2 they were granted the following
new calls:

K5HO K6GND K6HO K6MTR K6TXB K6WOW KK6USA KK9DOG
NN6LM W6AAA W6BAH W6BUB W6BUG W6CAT W6FUN W6HI
W6KAY W6MTR W6NNN W6NUT W6RRR W6TNT W6XYZ WW5H
WW6CQ WW6DX WW6FM WW6HAM WW6LM WW6TXA WW6USA WW6WWW

(That last one will be great fun in a DX pileup!)

Yes, but aren't calls listed in the database up until 2 years _AFTER_ they expire? Does vacated mean 2 years after the 2 year grace period (or 4 years after expiration)?

If not, these under-two-year-old licensed _SHOULD_ still be in the database.

(The license of a friend of mine expired in May 1995 and is still in the database.)

-> available as a vanity call until September of 1998.
->
-> Lots of people probably didn't get the call they requested because they
-> most likely just checked to see if the call was vacant NOW, without
-> checking to see if it has been vacant for the last two years.
->

That doesn't make sense.

First of all, _HOW_ was the call issued in September of 1986? Do you mean
renewed? I passed my extra in 1986 and the calls at the time were NU7x. How
was a W7xx extra call issued in 1986? And where did you get this information?

Secondly, if the call just expired in September, it would _STILL_ be in the
call database. I have a friend whose license expired in May 1995 and his call
is STILL IN THE DATABASE. Apparently the call remains in the database until
the 2 year period is OVER. (My license expired this year in April and I renewed
it in August -- but it was always in the call database, even after expiration.)

So what's up?!

Only 11? What cheapskates! The Tucker family (N6TK, AA6KT,
AA6ET, and AA6TK) contributed $960.00 to the FCC for the
32 club calls they got in Gate 2.

As a note related to "What's really going on?", I see that FCC
now apparently can issue call signs for the other countries. One
of the calls (AT6T) issued on Nov 4th seems to be from India.

Many of the call signs I requested in Gate 2 are "unassignable"
according to the FCC. These calls have all been checked to
be outside the two year grace period and available for my
area. My first choice hasn't been in use since the 1960's.

The FCC said they'll get back to me.

Fred, AH6US

Quick note:
This topic was addressed when the original letter was posted in the summer. I don't think there's been any activity as an aftermath of the original letter. Had such been the case, I think we'd have seen the issue continue to be discussed.

M point is that perhaps someone should check if there is actually anything NOW going on with as a result of the original postings last June/July.

> W7CW SIMON E HESS Class: Advanced
> 6540 CHICO WAY NW Birthday: Sep 8, 1912
> BREMERTON, WA 98312 Expiration: Sep 9, 1996

If the FCC retired the call on Sep 9, 1996, then it will not be available
until Sep 9, 1998.

If Simon expired before his call, then the situation gets more complex.

1 -- A family member (with the proper license class) can apply for the call
at any time.

2 -- A club licensed before 1995, of which Simon was a member, can
apply for the call at any time with a "permission slip" from the family.

3 -- Anyone or any club can apply for W7CW if two years have passed
since the FCC retired the call. (This may not be the same as the date that
Simon passed on!)

Thomas J. Alessi asked a couple of good questions:

> Should clubs be allowed to have vanity calls?

Yes, I believe so.

> Should they be allowed to hold multiple Vanity Calls?

I'd question if they should hold multiple calls -PERIOD-. I think
a club should hold a single call. Then the question of multiple
vanity calls is moot. (Of course, the workaround is to
establish multiple clubs, each with a different call.)

Ah, much more mundane than that, Mitch... my initials, and much easier to
send on CW than my original WA5WDB and a lot easier to understand on
phone, even when I used phonetics, than the more-recent KF5ZC. I are now a
happy camper! <g>

I second that. I searched the UALR database for 'tucker' and CA and came
up with the following. They must have a great meeting hall if all the
clubs deceide to meet the same night < grin ;)

Callsign lookup results for:
CALL "" NAME "TUCKER" CITY "" STATE "CA" ZIP "" LIMIT "0100"

A better question to ask might be: Why does any club need more than a
single club callsign?

I vote no, clubs should not have more than one call. The club is an
entity and only "needs" one call to identify itself.

Clubs should not be able to monopolize calls, just as an individual
should be not able to have more than one call. I think that the
loose definition of "club" has led to abuse of the system.

Body handling: HTML body converted to readable text

CURRENT 'HOT' ISSUES!

* 1. SHOULD MORSE CODE KNOWLEDGE BE A REQUIREMENT FOR AN HF
VOICE LICENSE?

* 2. SHOULD CONTESTING BE CURTAILED? OR LIMITED TO CERTAIN FREQUENCIES
ONLY?

* 3. IS THE ARRL THE 'END ALL' FOR AMATEUR RADIO? SHOULD THERE
BE A RIVAL GROUP? IS THE ARRL DOING ALL IT CAN FOR THE NEW HAM,
FOR THE NO-CODER, AND TO GET NEW PEOPLE INTO THE HOBBY / SERVICE?

* 4. IS THE SINGLE POINT OF CONTACT FOR REPEATER CO-ORDINATION
GOOD OR BAD?

* 5. IS THE FCC A PAPER TIGER? WHAT SHOULD THEY BE DOING TO
KEEP THE AIRWAVES CLEAN?

* 6. ARE ANTENNA ORDINANCES REASONABLE?

* 7. IS THE NEW RF RULES, GOING INTO EFFECT, 1/1/97, INTELLIGENT?
FAIR TO HAMS?

* 8. IS THE INTERNET GOOD COMPETITION TO AMATEUR RADIO? IS IT
COMPETITION AT ALL? WHAT SHOULD AMATEURS DO TO INTERMINGLE WITH
THE INTERNET?

* 9. WHY ARE THE AMATEUR RADIO INDUSTRY SALES WAY DOWN?

* 10. WHY IS ATTENDANCE AT HAMFESTS DOWN? CAN IT BE INCREASED,
HOW?

Send me your comments on any or all the above issues. Let me know
if you'd like to be a guest on the Ham Radio & More Show and express
your views to all. What other 'hot' issues do you feel need to be
brought out more to the amateur radio community?

Send your comments to the show's host, Len Winkler, KB7LPW

I was asked to post this page on the newsgroups. This list is compiled simply
by me from e-mail, letters, and calls to the Ham Radio & More show. Response
totals may be posted in the future.

>JERKS. I would like to point out the TRUTH. Morse code is very useless
>for transmitting large volumes of information, even normal conversation.
>Morse code is the only way I can think to send information with CW. Many
>times CW is the only mode that can reach the desired areas of the world.
>You have no choice of what mode to operate. If you want to send a message
>via radio to some areas under certian conditions then YOU MUST USE CW.

Please explain your alleged basis for this inaccurate assertion ...
(since it is demonstrated engineering fact that there are digital
signalling methods which will perform at S/N ratios far below those at
which OOK Morse can be *heard at all*, let alone copied reliably)

>This is a problem with NATURE. You, physically, can not use a mode other
>than CW to send some signals.

Same questions as above ...

>If you drop the code requirement - then you run a high risk of
>losing a resource of people that can understand Morse Code. If noone can
>understand Morse Code then CW is a useless mode. If CW is useless - then
>there is a possibility of completely losing communications under many
>circumstances, mostly emergencies.

See above ... no need for CW ... use the modes that will get through
where/when CW can't even be heard (let along copied) ... much more
reliable and more efficient, too ...

435. Edition 2 of "Cool Vanity Calls!"

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-07 00:00:00 UTC
From: dvhunt@es.com
Message-ID: <55ts35$lk9@esnews.corp.es.com>
Source record: 213299

Back by popular demand, here's edition 2 of "Cool Vanity Calls!"
from monday's list:

Watch the skies!:

W1UFO CEI, MICHAEL A, WALLINGFORD CT

2 Meter fans?:

WA2MTR MOUNTAIN TOP RADIO ASSN, BRIDGEWATER NJ

My condolences to Jerry Garcia:

WD6EAD JERRY GARCIA MEMORIAL ARC SANTA, MONICA CA

Worms!:

W4ORM THE GLORIOUS SOCIETY OF THE WORMHOLE, SAINT PETERSBURG FL

Turn these upside down:

W7LM SERILLA, JAMES S SAHUARITA AZ
N3EN MC DONALD, ARTHUR K DARNESTOWN MD
WL7M HANNIGAN, JOSEPH C FRITZ CREEK AK
N0ON THORSON, BARRY J ROCHESTER MN

And this guy changes from an upsidedown reversible call to another one!:

W9GM (old call): WG9M WEIGEL, KENNETH R, LA CROSSE WI

You fax what?:

WE2FAX MONDELLO, F MERRILL, NIVERVILLE NY

Whoa, Bob!:

W0BOB GOZA, ROBERT I, BEAUFORT MO

Nice car, Bob:

W4BMW ROURKE, ROBERT J, ARLINGTON VA

Volksvagon fans:

W3VW WHITE, LEROY F, ANNAPOLIS MD
K4VW RICHARDSON, JAMES R, MOBILE AL
W4VW WHITE, WILLIAM V, WINSTON SALEM NC
W5VW CLARK, BILL C, GUN BARREL CITY TX
W8VW KUHN, JOHN R, WEST CHESTER OH

Aye yi Yi!:

K2III RICHMOND, THOMAS A, MARYKNOLL NY
K6III BLISS III, GERALD D, SARATOGA CA

Aye aye, Captain!:

K2II GREENBERG, LAWRENCE H, GREAT NECK NY
W2II VON REKOWSKY, ROBERT F, BELLPORT NY
W3II CLARKE, JOHN F, BIGLERVILLE PA
N4II CALLAWAY JR, EDGAR H, BOCA RATON FL
W4II PARR, LEE S, MONROE VA
W5II FLEET AMATEUR RADIO CLUB, KATY TX
W6II RUSIN, ROY M, SARATOGA CA
W7II FREDE, WILLIAM W, POCATELLO ID
K9II O CONNOR, MICHAEL Q, OSHKOSH WI

Oh, oh!:

N0OO SALTUS, FRANCIS N, FORT WALTON FL
K2OO ROCKHOLD, TERRY W, DEPEW NY
W2OO MOHNEY JR, DON P, JENSEN BEACH FL
W5OO DAVENPORT SR, JOHN W, SHEPHERD TX
W6OO OSBORNE, DONALD E, WILLITS CA
W7OO EVERETT, WILLIAM B, REDMOND WA
N8OO PETCHERKIN, VICTOR P, PINEVILLE LA
W9OO DURNAVICH, CARL E, HARVEY IL
K9OO BUDZ, DENNIS J, GILBERTS IL

Wow!

K6WOW GOLDEN STATE AMATEUR RADIO CLUB, LA MIRADA CA

Boring Rodent:

K7RAT BORING AMATEUR RADIO CLUB, BORING OR

Mormons!:

W5LDS HOLLINGSWORTH, ROBERT E, HOUSTON TX
K7LDS GRIFFIN, GARY A JOHNS, ISLAND SC
W7LDS HALLETT JR, CHARLES W, PHOENIX AZ

Look at all the HAM's:

K9HAM LEWIS AND CLARK RADIO CLUB, GODFREY IL
W8HAM DOMMER, CHARLES E, BATTLE CREEK MI
W9HAM DYLE, RANDALL E, GREEN BAY WI
WW6HAM SOUTHERN CALIFORNIA ARC, LA MIRADA CA
K2HAM ELECTCHESTER V H F CLUB INC, FRESH MEADOWS NY
K6HAM MC BRIDE, WILLIAM, BETTENDORF IA

I guess this guy _doesn't_ like long distance contacts:

N0DX AA0GG WEIGELT, FRANK H, IOWA CITY IA

Wine and cheese:

W1NE DONAHUE JR, JOHN A, WESTBROOK ME
W1ZZ STRATTON, EDWARD H, GROTON MA

Where's the ark?!:

N0AH VEAL, BRYON P, BRIGHTON CO

English teacher?:

N0UN ORDAKOWSKI, WAYNE G, AURORA CO

PBS fan:

N0VA SMITH, KENNETH A, GRAND JUNCTION CO

Now this dog has no time for anybody:

K9BZ ZUEHLKE, BRADFORD K, ROBERTS WI

10, 30, and 40 meter Old Man:

W1OM GRANT, KEVIN E, BROOKLINE MA
W3OM STOVALL, DAVID B, ROCKVILLE MD
K4OM PERKINSON, JOSEPH E, ROSSVILLE GA

Now how come nobody picked NE1TNS?! or W8LFT?! or N0ONE?!

Isn't it just the other way around? I thought large storage led to
long recovery times which led to low frequency.

For those interested in a finely embroidered cap with your new call sign, check out the web site of

http://members.gnn.com/embexpress/hamcaps.htm

My company gets embroidered shirts and caps from this fellow, and his work is excellent. He has state-of-the-art computerized embroidery equipment and he's fast and very reasonable.

I am in no way affiliated with Embroidery Express, but a happy customer who's spreading the word.

I just ordered a new cap for myself yesterday.

Regards,
Sam Alfano

Message-ID: <01bbcc7d$65959220$5ed2d8cd@kg9ae.surf-ici.com>
Source record: 213303

I don't want to discourage you, but, I would like to point out a problem. It would be cheaper if you either are going to build 1000 +, or, have the parts laying around. Infrared components are expensive. A IR receiver is about $10 and a transmitter $5. You need a spraed-spectrum transmitter. The one at Radio Shack has a +/- 1 Mhz Deviation from the center freq of 419MHz. I believe thaat it may be cheaper to spend $40 on the one at Radio Shack. The cheap option would be to build a cabled extender. It is very easy to build a IR extender with coax between the rx and tx. Dick Smith kits used to have one that connected to the CATV between televisions. I have this schematic somewhere in my files. It is very simple I believe it would cost about $20-$30 dollars to build with new parts. You may e-mail me at KG9AE@Surf-ICI.Com if you want the schematic. I may be able to e-mail the schematic to you.

How many times do I have to read messages from hams that send a
"Thank You" addressed to ALL. When one seeks help and
someone takes the time to respond, the least the receiver of
help can do is send a simple individual reply for thanks. After
all-the respondents to this call for help responded one by one.
I have received up to 75 messages in a call for help and sent
individual thanks to each. It was very time consuming, but it
was the right thing to do.

Would you at your wedding, if you were the groom, get up at the
end of the reception and yell out, "Gee, Thanks everyone for the
gifts?"
If you are a T Y P I C A L ham--absolutely.

It is unlikely you will respond to this if you did not even bother to
respond to someone who H E L P E D you

>concerned.

Lest you think it's just a few malcontents who are complaining about the KM6NP jam-peater, I'll confirm that it's even worse than what has been said. The KJ6TQ folks identified the 446.650 frequency pair as un-used and verified it had been silent for well over a year. They then wrote to SCRRBA (the "ARRL sanctioned" coordinating body, who maintain only a post office box for contact) asking for coordination on the pair. The SCRRBA response was NO RESPONSE - NO REPLY - NADA. KJ6TQ and others proceeded to build their repeater, again writing to SCRRBA. Again NO RESPONSE from SCRRBA. Eventually, KJ6TQ put an open high-level repeater on the air and sent one more letter to SCRRBA advising them of it. Then KJ6TQ sought and received a coordination from another coordinating body.

SCRRBA later coordinated KM6NP's closed private autopatch system ON TOP OF KJ6TQ, which by that time had a large user base and was serving a major part of Los Angeles. Wanna bet that SCRRBA will acknowledge those requests were made by KJ6TQ long before? I wouldn't. Seems a little odd to me that SCRRBA "discovered" the "available freq pair"

of KJ6TQ AFTER being told about it by KJ6TQ. Some coincidence, eh?
Well, I saw the letters.

Now the ARRL is working to get a Single Point of Contact for repeater coordination. I think most hams would agree with that idea. What I fear is that SCRRBA will get away with sending KM6NP to steal the pair from KJ6TQ unless the ARRL insists on some accountability from SCRRBA.

If you think the SCRBBA approach is how it should be done, take a look at the policy and procedure page for NARCC which does coordination for Northern California (URL: http://www.ccnet.com/~rwilkins/policy.html). Then try to find any similar public information from SCRRBA. Good Old Boys don't much like putting up web pages, as it brings in the wrong element, like folks who don't want your money to use a repeater.

John Minger, AC6VV, Los Angeles

> recollections of being told of sparking between a shovel and a wire fence

> nearish to a broadcast transmitter.

A broadcast transmitter puts out a LOT of power, and the fence by its
length could pick
up a fair amount, enough to arc to a grounded shovel.

I don't know if 700 mW from a cell phone could create a spark. I think in
most cases it
would be relatively safe but certainly it COULD be enough if the atmosphere
was in the
explosive range and certain other conditions were met. I know that a 4
Watt UHF Saber
will make a nice arc if the antenna is removed when transmitting (and you
can also get
a RF burn, I most uncomfortably found out).

If you are in a known explosive atmosphere and your life depended on no
sparks, I would
keep the phone totally off.

legit?

I'd bet a small sum that his "club" applied for multiple call signs on separate 610V applications with an intent to "increase his odds" by purchasing more "lottery tickets." Perhaps the FCC should have instituted a "one per customer rule" in order to avoid these situations. Under these circumstances, should the Commission allow him to keep any of the calls signs?

Is it against the FCC's rules and procedures to file simultaneous, multiple applications?

What a freakin joke! I've been out of ham radio for about 5 years now,
and just out of curiosity, I check out this NG to see what's new. And
guess what? NOTHING!! It's as if I opened up a time capsule, and the
stagnant air of ham radio comes flooding out! God! I think that the
very thing that caused me to stop reading the ham NG's 5 years ago was
the pitiful threads on code/nocode. Reminds me of how I got sick and
tired of sitting around with fat old men in radio clubs with nothing
better to do than lament endlessly about a dying hobby that's been
surpassed many times over by modern technology.

Well, sorry, I don't have time to argue pro or con for CW, even though
I head copy 30 WPM myself. I'm going to go out and do some rock
climbing. Anyone need work done on their pitiful little antenna
towers?

>

You have to remember that many government agencies are running computer systems that are considered "antique" by many standards. Getting parts for a computer that is more than 6 years old can be nearly impossible. A buddy of mine fixes old computer systems and usually needs to debug a board down to the component level, find a new one and solder it on, re-test and reinstall the component because spares are impossible to locate. This usually results in several days of downtime for the customer. With government budgets cut to the bone, spending money on a new computer system is out of reach of many agencies. Just look at the FAA. The computer systems are so old that many parts need to be scavenged or re-built resulting in many hours, even days of downtime. There were a couple of cases of the air traffic control systems going offline for long periods of time just for this reason over the past few months.
Getting parts for a brand spanking new Sun server takes hours. Most of that time is travel for the field tec. Parts for a DEC 11/70 (yes, I know of at least two that are still used daily) have not been made for years and usually need to be fabricated.
Anyway, it is a moot point now. Gate 2 calls are out.

73'es and GL in the callsign lottery!

Any VHF/UHF scanner from Radio Shack will pick up general air-traffic
controller communications between the aircraft. Operational radio
messages, however, are usually digitally encrypted and impossible for
anyone but the military to decipher.
If possible, a talk with the base commander might get the frequencies
that they operate on.

I would suggest FM Broadcast-Band transmitters. You can legally operate low power FM Broadcast-Band transmitters for short range use. I believe that they may transmit up to 300Ft by law. There are several companies that sell kits to build these devices. I believe that most of these companies will even build the kits for you for a small fee. I would recommend a PLL transmitter. They are more expensive, but, anything else would be very risky and unreliable. The others are around $20, but, these drift around the band (I have seen them change 20MHz when someone walks by them). The PLL transmitters are usually around $100. They are even available in Stereo for slightly more. You could use any FM radio to recieve the signals. Walkmans, Headsets, etc.
The other alternative would be 900MHz devices. I do not think that there are enough channels available for 15 broadcasts on that band, though. These would be expensive, and, require special receivers.

I assume you mean a poor connection in the aerial.

The aerials I have seen here are just small ~ 1cm projections from the phone. That brings up the other safety angle I have been wondering about for some time.

Are those aerials actually cross-field antennas? There was an article about practical ones of these and the controversy about them in `Electronics Worls and Wireless World' Nov 1989, pp 1109-1111.

`The important features of these antennas are (i) that they are excellent receivers, powerful efficient radiators and (ii) their physical size is independent of the radiated wavelength - an unprecedented concept in antenna theory and design.'

We currently have a controversy about the placing of a cell phone tower near a school. A member of the sceptics says the risk is minimal. I am wondering whether any parts of the human body can act as cross-field antennas.

Have the cross-field antenna sceptics given in? Will the RF bio danger sceptics eventually give in?

I have programmed two of those radios. It makes an excellent Ham transceiver, and, won't explode in a gas-filled room (Inside joke). The GP300 requires a motorla GP300 compatible programmer available from motorola for about $700 or several third-party companies for about $300 and Motorola GP300 software (available only to Motorola dealers from Motorola for a large amount of cash). My advice is to make friends with a motorola dealer.

It appears to me that everyone writing in this subject are NARROW-MINDED JERKS. I would like to point out the TRUTH. Morse code is very useless for transmitting large volumes of information, even normal conversation. Morse code is the only way I can think to send information with CW. Many times CW is the only mode that can reach the desired areas of the world. You have no choice of what mode to operate. If you want to send a message via radio to some areas under certian conditions then YOU MUST USE CW. This is a problem with NATURE. You, physically, can not use a mode other than CW to send some signals. It is not some political game, or, a conspiracy to keep jerks, like yourselves, off of HF. If you MUST use CW to send a message somewhere - then you MUST have someone who knows how to send it and receive it. Currently, this means HAM RADIO OPERATORS. I will guarantee that you WILL find a Morse Code KEY on every US-Naval Vessel on this planet. It is a fail-safe. It is fool-proof as long as there are people that can understand Morse Code. Again, this means HAM RADIO OPERATORS. If you drop the code requirement - then you run a high risk of losing a resource of people that can understand Morse Code. If noone can understand Morse Code then CW is a useless mode. If CW is useless - then there is a possibility of completely losing communications under many circumstances, mostly emergencies. I invite you FOLKS to note that the US Amateur Radio SERVICE (Not CLUB, GAME, TOY, etc.) was created to give the US government (The one that GRANTS THE LICENSE - "Primary Beneficiary") a means of emergency back-up communicatons and promote the radio art. That has not changed, and, probably will never change. I am tired of typing so I will stop. I think that you may get some idea of what I am talking about. If you don't understand - then you are on a soapbox, and, are not interested in the truth.

Happy complaining,
David Norris - KG9AE

471. RF detector to logic level input?

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-08 00:00:00 UTC
From: roth@tpusa.com
Message-ID: <847409815.1343@dejanews.com>
Source record: 213110
Cross-posted to: sci.electronics.design,rec.radio.amateur.misc

Any ideas for a quick and dirty circuit that can take an RF input
and convert it to a logic level? No demodulation needed here,
simply want to be able to have a "1" output if RF exists, a
"0" if it does not. This is going to be driven by the RF output
of a VCR, outputing on US VHF TV channel 3 or 4.

Thanks,

Lee

472. Early 50's Call Book?

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-08 00:00:00 UTC
From: dnel@cdc.net
Message-ID: <55vg5g$ojg@cdc2.cdc.net>
Source record: 213111

I got my first-choice "vanity call" by Gate 2 - the call of my "Elmer" from the early '50s. Visiting his panelled shack filled with Collins gear and hearing a.m. worldwide qsos gave me plenty of incentive to get my Novice ticket at about age 13.

I wonder if someone might have an early-1950s call book and would take the trouble of looking up the call W3CO and emailing me the text of the listing.

Any book from about 1950-53 would probably have the listing I'm see-king. The holder would have been Gen. Gregory in Washington, D.C., probably with an address on Taylor St., N.W.

Thanks for any help anyone might give.

No, they should not. Too many clubs are merely fronts for one or two
people hogging callsigns.

Hi, don't have a reply to your query; just an observation. Perhaps there was some influencing done at the FCC prior to the "seventies scandal" if that call was issued to th General Gregory in the fifties or earlier. Seems as though the phonetics "Whiskey 3 Commanding Officer" might have been appropriate for a general officer stationed in Washington D.C.

What do you think?

Can't agree there. A person need only want to know enough to pass the
license exam. If you start judging whether or not someone is a ham by
their perceived motivations, you open up a whole can of elitist worms.

If someone is interested in, say, propagation, or antenna design, and
couldn't care less about RF circuitry, but passes the exam...not a ham?
"Belongs in another radio service?" Divisive words.

Fortunately, Carl and Gary don't get to decide who is and isn't a ham.

That's what i find so interesting. They debunk one paradigm but are quick and ready to impose another. Like the revolutionaries who overthrow a dictatorship only to impose their own brand of totalitarianism.

Hopefully, most will seek common ground and work from there.

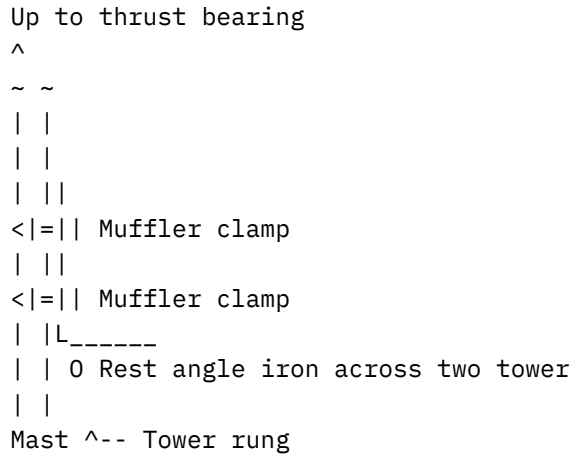
> >antenna and mast.
>

I had this same problem, and got a 2-foot length
of steel angle iron (about 2" x 2" sides, 3/8 thick) and mounted two
3" muffler clamps projecting outside the angle, and then
mounted one much smaller clamps on the same side. I placed
the bottom flat on the tower rungs, and clamped the mast in the
3" clamps (I have a 3" mast, you might use smaller clamps). Then
I used the other one clamp to secure the angle iron to one of the
tower legs (it projected out through the angle iron on the same
side and in the same direction as the mast clamps). This held a
VERY big antenna array quite securely through a number of subsequent
high winds.



>
> >Also, if the hex set screws that fix the mast clamp

> >the methods (in order of increasing desperation) for
> >dealing with them - liquid wrench, EZ-out?

I will echo Gary's comments on the hex screws that
bind the mast clamp to the mast. The screw that bound the
mast clamp to the 'D' key on the rotator shadt was frozen,
and even drilling it out did not free the clamp (it merely
messed up the 'D' key enough so that it would not budge. I
ended up hack-sawing off the rotator shaft. There is little
room, so you need one of those mickey-mouse looking hacksaw blade
holders. This whole episode took 7 hours on the top of the tower,
and is not highly recommended.

From: dvhunt@es.com
Message-ID: <55vqq6$q99@esnews.corp.es.com>
Source record: 213121

I didn't make it in on day 1, so I'm still waiting. (And probably will be for some time -- you remember that, dontcha guys?!) It appears that all of my choices EXCEPT ONE are GONE already. I have one "lottery ticket" left. Could somebody please check in in old callbooks to see when it was vacated?

The current databases DO NOT have it, but that apparently isn't a good enough test (look at the thread about W7CW, which I also applied for). I just want to know if I should start coming up with another list and get my refund form ready, or if I have a good chance of getting it.

Anyway, could somebody look this up: N7LN. Any past history on the call would be appreciated as well.

Thanks,
Darvell (KE7GW)

Source record: 213122

I have been out of ham radio for seven years and am now buying equipment to resume the hobby. In searching for an HF amp. I have found a Henry 2KD5 locally. It is cosmetically like new, wired for 220 v., has the 10 meter kit installed, and shows about 1400 watts output with 100 watts of drive.

The person selling the amp is asking $900. I need some input here, is that a fair price? Any constructive comments would be appreciated.

Ken Sturgill, KC4IH

Club calls really aren't necessary at all. The Club can use the call
of the station trustee. In a contest senario they can use any call of
any of the club members (with their permission). My vote is to get
rid of Club Calls.

QST de W1AW
Propagation Forecast Bulletin 46 ARLP046
From Tad Cook, KT7H
Seattle, WA November 8, 1996
To all radio amateurs

SB PROP ARL ARLP046
ARLP046 Propagation de KT7H

Visible sunspots were back to zero over the past week, after a few days of low activity. Flux is still just under 70. The average A index was down about 3 points, indicating somewhat more stable geomagnetic conditions.

Over the next month we can expect solar flux to stay about the same, with flux below 70 over the next week, and then right around 70 until the end of the month. Due to recurring coronal hole effects rotating onto the solar disk, conditions should be unsettled to active from now until November 20, with the most unstable days being November 14, 15, 18 and 19.

In last week's bulletin ARLP045, Hardy, DL1VDL was identified in one instance as DK1VDL. The correct call is DL1VDL.

Sunspot Numbers for October 31 through November 6 were 0, 0, 0, 0, 0, 0 and 0, with a mean of 0. 10.7 cm flux was 69.7, 70, 69, 69.5, 69, 68.3 and 69.2, with a mean of 69.2. Planetary A indices for the same period were 8, 2, 2, 2, 9, 6, and 7, with a mean of 5.1.

>ttfn fiz (KG0YG, formerly KB0PRE)

ualr? What's that.

I tried:

http://www.qrz.com/cgi-bin/webcall

http://www.ualr.edu/~hamradio/callsign.html

and each of these had the same results. I see what you mean. If your
call sign CHANGED, rather than expired, it may not appear in the databases,
but yet it has not been vacated for two years.

That makes sense.

(Is a silent key immediately removed from the database as well?)

Cross-posted to: rec.radio.amateur.misc,biz.jobs.offered,dfw.jobs,misc.jobs.offered,us.jobs.offered

DFW, TX; Staff RF Systems Engineer; Super Heterodyne Receivers
Client has a leadership position available in its Engineering Staff for
a RF Systems Engineer reporting directly to the Vice President of Engineering.
The primary objective of this position is to develop detailed architectures
and implementations involving the reception of television signals originating
from both cable and "off-air". The resulting architectures are reduced
to chips and software which become products of the company. The job involves
hands-on engineering to specify and build demonstration printed circuit
boards (PCB's) for RF applications. The candidate must have a detailed
understanding of the television signal spectrum, modulation and demodulation
methods and issues, transmission methods and issue, and the general signal
processing required to receive a television signal and move it to baseband.
He or she must also have a detailed understanding of the standards set
by governments and standards bodies throughout the world regarding television
transmission and reception as well as the television signal itself. A
detailed knowledge of continuous-time signal processing is required. The
candidate must be able to define filter requirements, their transfer function
and implementation. Chip design knowledge is preferred. EDUCATION MSEE
or better from superior engineering school with good records.EXPERIENCE
8 or more years in RF system development including: Super heterodyne receivers;
Filter design; PCB design for RF applications; Tuned circuit design for
receiver front ends; IF section design; Television reception; Noise &
distortion analysis. Prefer understanding of monolithic implementation
issues and chip design in general. In qualifying a candidate, MicroTune
looks for the following additional characteristics. Candidates should
have high energy, be tenacious, be resourceful in dealing with problems,
and have a positive outlook towards life. Good writing and speaking skills
are expected. We require all candidates to be computer literate, and as
such, require expertise in either UNIX or MS-DOS/Windows as well as skill
in a high level programming language, preferably C. A general aptitude
for CAD tools is preferred.

Please refer to JO# 629JMS in your response.

Jerry,

I just bought a FT50R and have borrowed cable and s/w from an FT51R owner. I plan to clone the cable. I will let you know what the schematic is like when I open it up myslelf in the next couple of days. Please send your email address.

However, I am now looking for the ADMS s/w for the FT50R as my borrowed disk is old and doesn't have it. Does anyone have it to send....??

thanks.

Well, roll me over in the Clover. You mean they don't have radios
yet to do all this great stuff. Golly gee. A lot of good that will do
amateur radio. Yessireee.

As for buying a pactor or Clover adapter, no thanks. I like to use my
radio for more than sending "CQ DE KD1HZ" ad infinitum without a reply.

507. * Windows Logging Freeware

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-08 00:00:00 UTC
From: "Mike McAmis"
Message-ID: <55u2oc$9jo@dartvax.dartmouth.edu>
Source record: 213237

Disappointed with your commercial/shareware logging or packet software for Windows? Try XMLog, freeware that's available on the Internet. XMLog provides a flexible set of coordinated logging and packet features.

Where to get XMLog on the Internet using a Web browser:

Try my new home page at http://franklin.ptgi.com

or...

Try the Boston Amateur Radio Club's home page at http://www.acs.oakland.edu/barc/barc.html

- scroll down to the "BARC FTP Archives" section
- click on "FTP Archive"
- scroll down to "Software Archives"
- click on "PC Files"
- click on "logging"
- scroll down and click on "xmlog125.zip"

(Even though the directory says DOS, it really is a Windows program...)

Getting XMLog on the Internet using FTP:

Sign on to ftp.barc.org with the userid of anonymous and a password of guest. Move to the /pub/hamradio/dos/logging directory and get xmlog125.zip

or...

Sign on to ftp.funet.fi with a userid of anonymous and supply your e-mail address as the password. Move to the /pub/ham/hf-log directory and get xmlog125.zip

Version 1.24/1.25 has many minor improvements - the big changes are DXCC/WAS/WAZ award submission tracking and support for the Radio Amateur Callbook (Flying Horse) CD.

If your PC only has 4mb of memory, Version 1.23 is still available at my home page or at BARC's home page (version 1.25 requires 8mb).

The archives can be busy at times, don't give up if you can't sign on right away. Let me know if you:
- want more info
- can't fetch the file

- want a diskette instead

Have fun...

>antenna and mast.

Yes, you need to stablize the mast. You can do that with
wire cables to the tower legs, wooden blocks wedged to
the tower legs, etc. Cables with turnbuckles are probably
the best approach. They can be tensioned to hold the mast
well centered, and won't be dislodged by the wind torquing
on the antenna.

>Also, if the hex set screws that fix the mast clamp
>to the rotator output shaft are really frozen, what are
>the methods (in order of increasing desperation) for
>dealing with them - liquid wrench, EZ-out?

Before you *touch* the first screw, soak them in Liquid
Wrench for 24 hours. Use a well fitting hex bit and a
hand impact driver (available at Sears). The impacts will
work the screws loose without torquing them off or ruining
the heads. Be patient, don't use an air wrench, just keep
tapping away. If the screws are really stubborn, heating
with a propane torch and resuming impacts can often help.

If you do torque off a screw, you'll have to resort to the
EZ-out or drill them out completely (which will force you
to retap the housing for a larger screw when you put it back).
If you just wallow out the socket, then you can weld in an
extension hex bit and work the screw out with vicegrips.
Neither of these methods is easy when high on a tower. Best
is to avoid torquing the screw off or wallowing the head in
the first place. Don't use worn hex bits. Make sure you have
a really tight fit. If necessary, upset or grind a bit to be
a perfect tight fit before you start. Use an impact driver,
don't just crank on a hex wrench with a cheater bar. A few
extra minutes of preparation can save you hours of frustration
later.

>and down", by Clinton Desoto (Circa 1936).
> If you can't see the similarities between the "beginings of ham radio,
>and the problems now", your part of the problem itself.

In particular read pages 177 through 180 to learn that the basis for imposing high speed Morse testing is rationing of phone spectrum (in the opinion of the author and his publishers who lobbied for the increase). In fact the final chapter of this book looks remarkably similar to today's pro-coder arguments, IE only radiotelegraphists are worthy, all others are low life scum who should be restricted as much as possible, nirvana has been achieved, no real technological progress is possible, etc.

Even though technology has changed radically, we've proved we can deal with many many times as many amateurs as DeSoto thought possible, and we have technology becoming available to do so again, the same tired arguments that DeSoto listed in 1936 are still trotted out today. The similarity is striking. Even in 1936, the neo-luddites had staked out their positions in defense of the status quo.

The early chapters are illuminating too. They chronicle the near constant spectrum grab attempts of other services at the expense of amateurs. This has its similarities to today as well. In particular, the use of grassroots political pressure is documented as saving the very existence of amateur radio in the early days. Amateurs, their families, and their friends, writing letters directly to Congress, played a vital part in saving amateur radio. Numbers matter, and politicians, even corrupt ones, can count. Of course it was a simpler time. While politicians were more openly corrupt then than all but the most depraved Democrats of today, they could also be influenced far more cheaply.

>strictly straight key. Bet that will raise some hackles!!

Sure, SKN is still around. Novice Roundup is gone, lack of interest
I guess, but a few brass pounders still keep SKN alive.

BTW, at last weekend's local hamfest, W4QO had the largest J-38
replica I ever saw, over 3 feet long. I had to prove to some pro-
coders that I could still beep, and I did too, using that monster.
No speed demon I, of course, so that key didn't really limit my
performance. :-)

>By the way, why all the animosity out there?

Oh, it's the usual "I got mine" attitude of the neo-luddites.

Frankly, Bob Park has no credibility in my book after some of the
purely political stances he has taken on other scientific matters.
I lump him in with the UCS crowd, willing to take outrageous stances
purely to promote political agendas.

Gary

I search a vox program to save the rx on my computer .

When i cant listen (when i sleep) i want to save the scanner rx on my computer
to do this is must have a vox program who save only when the scanner "speak"
You can say i am mad and i must have a big HD , but here the cops dont speak very mutch .(this is not USA)

:)))

If you have an idear of a vox program for a PC then mail me

Thanks for all .

>are pleased...

Receive is pretty simple. Just tap the audio at the discriminator.
Transmit is more of a problem. Because of the way modulation is
done in the PLL, the loop filter will cause your modulation to be
distorted. The best way out of this is to use dual point modulation.
This requires inserting modulation at both the VCO and at the
reference oscillator. This negates the loop filter problem to
a large extent. You may still have phase distortion, and you may
need to add a precompensation filter to the baseband to deal with
that.

Unfortunately, there isn't a lot you can do about the relatively
long TR time of the radio. That's going to hurt *everyone's*
throughput on the channel since they're all going to have to lengthen
their TxD so that they can work with you. You really are better off
using a radio designed for data rather than trying to modify a voice
radio for a service it wasn't intended to perform. (Data radios like
the KS-900 are lots cheaper too.)

I bought the UT-101 DTMF option for my IC-2000H today but it doesn't seem to work! Are there any known problems with this option? I know another ham who has it and HE can't get it to work either. If anyone can help me figure this thing out I'd appreciate it. I installed it properly and I'm following the instructions but no luck. One of the many things this does is let you punch in freqs from the mic keypad. This should be standard on all rigs in my opinion.

: > cause trouble at fuel installations.
: >
: > Does anyone know at what sort of power sparking might occur? I have vague
:
: > recollections of being told of sparking between a shovel and a wire fence
:
: > nearish to a broadcast transmitter.
:
: A broadcast transmitter puts out a LOT of power, and the fence by its
: length could pick
: up a fair amount, enough to arc to a grounded shovel.

Yes, the medium wave band ones in Christchurch have been from 10 to 60 kW. And the fence could have good dimensions to pick up the MW band.

:
: I don't know if 700 mW from a cell phone could create a spark. I think in
: most cases it
: would be relatively safe but certainly it COULD be enough if the atmosphere
: was in the
: explosive range and certain other conditions were met.

Do you mean damp air?

The chch.chat group say that the frequency is ~836 mega Hertz. That would make a half wavelength antenna 17.8 cm. So an 8.9 cm metal object with one end near a metal surface could have quite a field between it and the surface if the phone were close, or if some sort of curved surface - the inside of a car roof perhaps, were having a focusing effect the effect could be stronger?

Perhaps that sort of configuration would be interesting to check. Try the rod as close as possible to the plate without touching it. See if it makes any difference when it is just touched briefly.

Since I posted about the cross-field antennas the photos of the phones in advertisements have been showing with aerials extended. So I presume they are not cross-field. I presume more power is emitted when the aerial is extended.

Brian Sandle

I know that a 4
: Watt UHF Saber
: will make a nice arc if the antenna is removed when transmitting (and you
: can also get
: a RF burn, I most uncomfortably found out).
:
: If you are in a known explosive atmosphere and your life depended on no
: sparks, I would
: keep the phone totally off.

What about the rest of the APS committee who put together the research? It wasn't a BP solo effort.

Gary -- I'm not nitpicking you (like I did over photons) -- but I really want to understand: 1) Is the APS report, in your mind, credible and 2) if not, whose report *would* be credible? Or are there too many vested interests to come up with a clean, disinterested study?

There sure seems to be a lot of people out there who think they did everything by themselves, without any help. I think that you guys who swear that you never had an ounce of help, walked to school in 2 feet of snow uphill both ways, and did things the hard way and earned 'em are full of it.

What most of the no-coders resent is that we are forced to abide some archaic ritual that is supposed to ensure a qualified pool of radio operators. Some individuals choose to bring their concerns to this newsgroup to debate the issue and try to make some changes based on their idea of what is right or not right. It helps the debate not a whit for people to globally declare that everybody wants "something for nothing" or other such stereotyping garbage.

I believe that a lot of very technically proficient people who would be beneficial to ham radio in general are not staying with ham radio because of the arcane ritual called morse testing. These people are not lazy, stupid, or greedy, They do not want something for nothing.

P - 7630 S. Teotonio
Portugal
E-Mail: m.deppner@mail.telepac.pt

Where are the engineers, tinkers or similar ones ...

... and who knows, where to get data sheets from integrated circuits.
Some of the manufactures offer this service (for example Texas
Instruments)
but I am especially looking for data sheets of Japanese semiconductors
and also older European ones.
Examples are:
All the TDA types (e.g. TDA 2161, TDA 1941 ...)
All the AN types (e.g. AN 7420, AN 5615 ...). Japanese ones,
All the LA types (e.g. LA 7910, LA 7224 ...). also Japanese.
All the SAA types (e.g. SAA 1274 ...)

Because I have many of this ICï¿½s at home and want to use them,
information
is necessary and perhaps also some applications or hints.
So, if somebody had collected these informations in earlier times and
could help me, I would be very pleased.

Hope to get plenty of answers in the (near) future. Thanks.

Does anyone out there have any experience with the AEA FAX III WeFax
package? Do you need to have a downconverter and dish to use the package?
It can't be as simple as plugging it in, hooking it to the hf rig and getting
weather sat pics. Or is it that simple? Any help appreciated!

Can anyone tell me what became of Sensible Solutions of Middletown
New Jersey, who used to produce the WB2OPA Logmaster Plus Plus
logging program? They were supposed to produce a windows version
of this program, but I haven't heard a thing about them for over
a year.

Okay, this makes some sense, even though I'm not completely convinced.
It seems like if we believe that we need enough stored charge to carry
us through some part of the reverse half cycle, then as the frequency
goes up (and the period goes down) and as long as we assume that the
currents drawn are "the same," then LESS stored charge should be
required at higher voltages.

I think we're still missing something here.

E-Mail: m.deppner@mail.telepac.pt

Where are the engineers, tinkers or similar ones ...

I am looking for some circuit diagrams for comsumer electronics stuff like the following: (because it is so difficult to get them directly from the manufacturer)

Telefon answering combination type TAM 250 from Grundig
FAX telefone combination type KX-F2700G from Panasonic
Private FAX from Alcatel

Television Spectraportable Color T3633 from Nordmende (type 2.511A chassis: F8)
Satelite Stereo Receiver "Smartrack" (with 12 Volt power supply)

If you have one of these or know where to get them, please let me know in my electronic mailbox (see above). Or if you have the possibility to digitalize them send them as E-mail attachment. Perhaps I can return some of the diagrams I have.

Hope to get plenty of answers in the (near) future. Thanks.

-
Here is a summary of news items covered on edition #189 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 15-Nov:
-
1. 4500 Vanity Call Signs Hit the Air as Vanity Gate 2 Swings Open
2. KE6VNU Jailed and Fined for First Police Interference Charges
3. STS-80 Shuttle Launch Delayed, Next SAREX Mission in 1997
4. Recent Elections Should Bring Few Changes to Telecom Policy
5. Special Event Station Calendar
6. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
7. W0KIE Uplink Change Transparent to "This Week" Affiliates
8. ARRL Increases VEC Exam Fee in Accordance with Cost of Living
9. Weekly Propagation Forecast
10. "This Week" is Featured Topic on "Ham Radio & More" Nov 17th
11. New Mir Frequencies Cause Stir, Anger APRS and Repeater Users
12. ARRL Offers Free Electronic Filing of Forms 610 for Members
13. Shannon Lucid Plugs Ham Radio during Press Conferences
14. Hudson Division Names Editor of New Electronic Newsletter
15. "The RAIN Dial-up" from Chicago
-
Funding for the program's transmission and production expense was
provided this week by a grant from Gene Wicklund, WA0ZOK, of Horace,
North Dakota, where "This Week in Amateur Radio" is heard on the
WA0ZOK repeater, serving Fargo, North Dakota; Morehead, Minnesota;
and the Red River Valley on 443.75 MHz.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard on the "W0KIE Satellite Network" each Saturday at 9:00 PM
(EST) on the Hughes Communications SBS-6 commercial communications
satellite, transponder 13B upper, located at 74 degrees west
longitude in equatorial geosynchronous orbit. The transponder
center frequency is 12.019 GHz; tune up in frequency to 12.031 GHz.
Program audio is on the 6.2 MHz analog subcarrier and carried on
VHF/UHF repeaters throughout North America and on 160 meters at 1860
kHz. Contact your local amateur radio club or repeater operator if
"This Week in Amateur Radio" is not being heard in your area.
```

-
Production and transmission expenses are underwritten by donations
from repeater operators, amateur radio clubs, and individuals.
Further information is available from George Bowen, N2LQS, at
518/283-3665 (email kxkvi@delphi.com) or Stephan Anderman, WA3RKB,
at 518/664-6809 (email sanderman@delphi.com). You may also reach
them @ WA2UMX.FN32AW.ENY.NY.USA.NA via amateur packet.

From: mc@shore.net
Message-ID: <561rpo$n5r@northshore.shore.net>
Source record: 213160

This is pretty disgraceful - that one family of greedy pigs is able to grab up 32 vanity callsigns and get away with it. I expect that these "clubs" are bogus and just created for the explicit purpose of collecting callsigns. I would urge all of you who are disgusted by this little example of greed and deception to communicate your displeasure to the FCC and the ARRL. The policy should be one person one call and can also be trustee for a limit of one club only.

Wonder how many others have been able to get away with this kind of crap when some people got nothing? Sucks big time!

I am very happy with what I got in the callsign lottery.

73,

Michael

I have the AEA FAX III. You simply plug it into the Record Output of the Reciever. But it not only does WEFAX but also does, Morse Code, RTTY, and Fec/Navtex with the software that comes along with it. There is an option Software Upgrade which will allow you to do ACARS. Hopes this helps

DIVISIONAL NEWS

WANTED (ALIVE): VOLUNTEERS FOR THE BROADCAST ROSTER
We urgently need more people on the broadcast team who are prepared to be rostered on to do the evening broadcast. At present, we have seventeen people who are willing to help in the morning, four who will help either in the morning or the evening, and six who wish to be rostered evenings only. It does not take many fingers and toes to realize that, whilst the morning roster means people only need to come here about five times a year, the evening roster comes round once a month! If you would like to be trained either as an announcer or as an engineer or both - you don't have to have a call sign, as there is always one person rostered on who has a full call, please would you contact Pixie VK2KPC at the office between 10.30 and 15.30 hours Monday to Friday, or leave a message at any other time. We will accept people for the morning roster, but we really need ten or twelve more people for the evening roster, so that everyone gets a fair go. How about it, folks? Can YOU help?
WILL YOU help?
--Eric Fossey VK2EFY, Divisional Secretary

The 1997 Call Book is now available from the Office. The price is $14.95. Discounted price to members is $13.00. If you want it posted to you, please add a further $2.50 for postage and packing.

Still in the bookshop, the ARRL has announced volume 5 of its popular Antenna Compendium series. And, for the first time, the ARRL's famous Handbook is now available on CD-ROM, containing all the material of the printed version, including illustrations, but with the added benefit of letting your computer do the work of searching for important information. The CD also contains a number of utility programs, and other goodies. Also on CD-ROM are back issues of QST magazine. So far, issues back as far as 1970 are available, but the ARRL plans to go even further back next year.
If you would like a copy of any of these publications, please contact the Divisional Office, and we'll be happy to order them for you.

DURAL XMAS PARTY
The usual end of broadcast year function will be held on Sunday the 22 nd December at the conclusion of the morning callbacks. This is early advice for you to note the date on your calendar.

WICEN NEWS
Again, either nothing is happening, or we are not being told of any new exercises (or, for that matter, exercise reports), so this week's bulletin is an unashamed repeat of last week's.

We know of no exercises this month, apart from last week's.

The only event next month would appear to be the Lion Island Speedboat Classic, on Sunday 15th December; the organiser for this event is not yet known.

Next year sees the Bridge to Bridge Speedboat Classic on 4th May; the Hawkesbury Emergency Expo, run by Alan VK2YYJ, is over 16th-18th May; the Hawkesbury Classic Paddle is organised as usual by Kevin VK2CKD over 18th-19th October (unfortunately the same weekend as JOTA, but this is not WICEN's fault); and the annual Bungonia Cave Rescue will tentatively be on the weekend following, over 25th-26th October.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Northern Rivers each Tuesday at 8pm around 3610 kHz on odd Tuesdays and the Lismore repeater 6800 on even Tuesdays, Hunter each Wednesday at 7.30pm on the Newcastle repeater 6900, and Central Coast each Thursday at 8.30pm on the Wyong repeater 7125. If there are any other regular nets then we'd like to hear about them.

WICEN (NSW) has an interactive Web page, and the Uniform Resource Locator is: "http://www.nsw.wicen.org.au/". It contains pointers to many emergency-related pages likely to be of interest.

-- Dave Horsfall VK2KFU, WICEN (NSW) Inc. Publicity Officer

VK1 TECHNICAL SYMPOSIUM

The 1996 VK1 Technical Symposium will be held on the 23rd of November 1996 at the Charnwood Scout and Guide Halls, which are located on Tillyard Drive, Charnwood, ACT, near the Charnwood Shops. Registration will start at 0900 hrs with the proceedings getting underway at 0930 hrs. A set of proceedings, morning and afternoon teas and lunch is included in the admission price.

The day will continue with two streams of speakers until about 1700 hrs. Likely speakers are:

VK4DO Wally Watkins Radio Sports
VK1KCK Mike Walkington An Introduction to Spread Spectrum
VK1ET John Woolner Getting the Most out of Your TNC
VK1PK Peter Parker An Empirical Approach to HF Homebrewing
VK1RJ Richard Jenkins Working the HF Digital Modes - PACTOR
VK3AVE Peter Hallgarten Using DX Clusters
VK2KWY Brian Henderson TCP/IP Addressing
VK2DEQ Bruce Carroll Complex Numbers Without Tears
VK2KWY Brian Henderson An Introduction to Packet Gateways
VK2ALU Lyle Patison Amateur Radio at Microwave Frequencies
VK3ZJF John Day Evolving TCP/IP Protocols for Amateur Packet
VK1KNP Neil Pickford 4800 Baud Packet & Other Modulation Techniques
VK1KCM Carl Makin Integrating a Home LAN into the Amateur Environment

In addition, VK1GI Gilbert Hughes, is proposing to set up an Analogue RF Test station for measuring radio output parameters such a frequency, power, deviation etc. So bring you radio along and have it tested.
But wait, there's more! John Day will be providing a display of some of DAYCOM's more technical books and products.
So, come along on the 23rd of November and join us at the Charnwood

Scout Hall for the 1996 VK1 Technical Symposium.

If you need more information, please contact:
VK1KCK Mike on 06 292 0053
VK1KNP Neil on 06 258 7803 or
VK1ET John on 06 254 3140

-- Mike Walkington VK1KCK

SOLAR CAR RACE - The SUNSWIFT RESULTS
A message from Bruce VK2IBM that - SUNSWIFT - the University of New South Wales Student entry crossed the Adelaide finish line on Saturday the 2 nd November. They were 9th overall and 2nd in the University class. Their major problems were with the bicycle wheels used on Sunewift. They kept breaking spokes and had to keep getting replacements flown in along the course.

Update on the Antarctic DXpedition to Heard Island
We are now just 60 days away from sailing from Reunion Island aboard the Marion Dufresne, bound for Crozet Island, Heard Island , and Kerguelen Island. Half of our gear is already on the ship on Reunion, the other half due to arrive shortly.

We have nearly the entire original team intact, although a recent withdrawal has opened a position. If you or anyone you know is interested, please contact me immediately.

You can see all the information about the project on our web pages at http://www.ccnet.com/~cordell/HI (accessible via the Divisional Web page)

Finance
The budget for the expedition is $400,000, generated from expedition members contributions, donations and sponsorship. The funding for the trip is about 90% complete. We are now working hard to find the last 10%, or $40,000. We hope you might be able to help, either by being generous yourselves or by helping us to locate resources.

Thanks go to those people and orginisations who have already send in donations.

We are open to the possibility of taking one or two "guest/sponsors." These people would not have any formal duties and would not even have to be licensed radio amateurs, but would be financial supporters and guests for the trip. If you have any suggestions, please contact me.

SCHEDULE
The Heard Team schedule is as follows:
DATE LOCATION CALLSIGN

Dec 29-Jan 2 Reunion Island TO0R
Jan 8-9 Crozet Island TX0C
Jan 13-27 Heard Island VK0IR
Jan 30-31 Kerguelen Island TX0K
Feb 6-9 Reunion Island TO0R

OPERATING FREQUENCIES
CW SSB RTTY
160M: 1.8265 N/A
80M: 3.507/3.522 3.799
40M: 7.007 7.065 7.030
30M: 10.104 10.140
20M: 14.024 14.195 14.085
17M: 18.074 18.145 18.105
15M: 21.024 21.295 21.085
12M: 24.894 24.945
10M: 28.024 28.475

TECHNOLOGY
Modern technology will be employed, much like the very successful "DXpedition of the year-1995 " to Easter Island / Salas y Gomez (XR0Y/XR0Z). The team will log using a CT-network. Every day the logs will be uploaded via Pacsat to a central site for posting on the World Wide Web. Anyone will be able to enter basic information about a QSO, and receive confirmation that the QSO is in the log.
QSL chores will be by INDEXA:
INDEXA
c/o W4FRU, John Parrott, Jr.
P.O. Box 5127
Suffolk, VA 23435-0127 USA

Donations
In order to make this expedition to happen we need the last $40,000 to cover our costs. Please support our efforts in providing this Dx opportunity.
Donations are gratefully accepted via:
Northern California DX Foundation, PO Box 2368, Stanford CA 94309-2368 USA
c/o David Muller - VK2TQM, Locked Bag 29 Post Office RYDALMERE NSW 2116

Make cheques payable to "Heard Island Expedition"

The Heard Island DXpedition team is committed to carrying out this operation in an exemplary manner. Every effort will be made to ensure the maximum number of QSO's on as many band/modes as possible while minimising interference to other amateur interests. Your feedback and input through the Pilot operators is critical to this goal. What we learn through this project will aid others in carrying out operations in the field safely and reliably in the future, and will serve as a guide for those to follow.

We hope you will enjoy and support this expedition, both with your QSO's and financially and will be proud to say "I helped make it happen!"
Come on Australia, please send your donation NOW!

For more information please contact David - VK2TQM, Monday to Friday on phone 02 9898 7426 or by packet vk2tqm@vk2tgb or by email davidm@gec.com.au

CLUB NEWS

WAVERLEY AMATEUR RADIO SOCIETY
A number of events are planned for the society over the next few weeks. On Sunday, November 17th, we are having a clear out of the club premises starting at about 9:00 a.m. We are planning to throw out quantities of surplus electronic gear, including multiway cables, PCBs full of components, racks and some miscellaneous pieces of equipment. Come and give us a hand and take your pick of anything of interest to you. Our regular monthly meeting is, as usual, on the third Wednesday of the month. It starts at 7:30 on November 20th and the main topic will be a talk by George Georgevits, VK2KGG, on the "Biological Hazards of RF Radiation". So come along and find out how safe it is to operate your handheld or mobile phone.

The first Saturday afternoon of each month is project day, so drop in on December 7th from 1:30 p.m. onwards and get involved in some practical work.

All these activities will take place at our club premises in Vickery Avenue, Rose Bay, off New South Head Road, next door to the Rose Bay RSL Club. Members or others interested in amateur radio are invited to come along.

Following last year's successful Xmas dinner, we are planning to hold another this year, also at the Rose Bay RSL. It is to be held on Saturday, December 14th and the cost will be $30 a head. If you would like to come along please advise Simon Buxton by phone on 9391-9738 or after hours on 9328-7141 to reserve your place.

--Submitted by Simon Buxton, VK2EII, President

THE ANNUNAL AUCTION OF THE ILLAWARRA AMATEUR RADIO SOCIETY. WILL TAKE PLACE AT S.E.S BUILDING MONTAGUE STREET NORTH WOLLONGONG NOVEMBER 12TH. ALL ITEMS FOR AUCTION MUST BE BOOKED IN BEFORE 1915HRS. THE BUILDING WILL BE OPEN FROM 1830HRS. THERE WILL BE A LUCKY DOOR PRIZE OF A VHF TRANSCEIVER TO BE WON ON THE NIGHT. SO TURN YOUR TRASH INTO CASH AT THIS AUCTION. THERE IS STILL TIME TO OBTAIN YOUR TICKET IN THE FT7B, F T (SEVEN) B, FOR ONLY $5 EACH. SO BRING ALONG YOUR CASH AND UNWANTED GODDIES TO THIS AUCTION. THERE WILL BE EXTRA COMMISSION CHARGED FOR LATE BOOKED IN ITEMS. SO BE EARLY. HOPE TO SEE YOU ALL THERE. IF YOU REQUIRE ANY INFORMATION RE THE CLUB RING BRIAN ON 042 672296 AFTER HOURS.
--BRIAN VK2UBF PUBLICITY OFFICER.

GLADESVILLE MEETING
Gladesville members and visitors are reminded that the November meeting

will be held tomorrow night - the 11 th - at Number 1 Birdwood Avenue, Lane Cove. The start is 7.30 pm. Parking is available opposite the venue. If any listener wishes to contact the Gladesville Amateur Radio Club you may call on the club phone - 0 2 9 4 2 7 0 5 3 0 (repeat) or write to P. 0. Box 48, Gladesville 2 111.

--Keith VKZZZO President / TV Co-ordinator.

AUSTRALIAN AMATEUR TELEVISION CLUB
THE NEXT MEETING OF THE A.A.T.C. Inc WILL BE HELD AS USUAL ON THE 2ND SUNDAY OF THE MONTH IN NOVEMBER AT 109 WIGRAM ST. PARRAMATTA 1.00- JUST AFTER THE WIA CONFERENCE.

TECHNICAL LECTURES WILL BE ON SEVERAL ITEMS, THEY BEING AS .....
1. AN OVERVIEW ABOUT THE NEW 'BDB' 1.2GHZ 23CM CLUB RECEIVER,
2. AN DESCRIPTION OF THE NEW 1.2GHZ 23CM CLUB PRE-AMP.
3. A DESCRIPTION OF OPERATIONS OF THE MX1O VIDEO MIXER,

THE ABOVE 3 TOPICS WILL BE BY DAVE AND FINALLY A BRIEF INTRO INTO WHAT HAS BEEN RESEARCHED ON THE PAL TO VGA TO PAL GRAPHICS AVAILABLE EQUIPMENTS BY BOB AND CADE FOR ATV

FOR MORE INFORMATION ABOUT ATV. CONTACT BOB THE PUBLICITY OFFICER ON (02) 9587-3491 DURING NORMAL CiVILISED TIMES.

--A.A.T.C. Inc. Publicity Officer Bob Barnes. VJ2R

THE VHF DX GROUP IS AN INFORMAL GROUPING OF ACTIVE VHF AND UHF OPERATORS. THE GROUP WAS FORMED TO PROMOTE NON-REPEATER VHF ACTIVITY AND TO ASSIST NEWCOMERS TO THE BANDS

VHF DX GROUP MEETINGS ARE HELD EVERY SECOND MONTH AND CONSIST OF TECHNICAL LECTURES, EQUIPMENT DEMONSTRATIONS AND WORKSHOPS.

THE NEXT MEETING OF THE GROUP WILL BE ON TUESDAY 19 NOVEMBER AT AMATEUR RADIO HOUSE, WIGRAM STREET, PARRAMATTA

THE MEETING WILL BE DEVOTED TO A PRESENTATION ON HOW AN AVERAGE OR BETTER TWO METRE STATION CAN LISTEN FOR AND EVEN WORK STATIONS OFF THE MOON DURING THE ARRL EME CONTEST LATER IN NOVEMBER. TIMES, FREQUENCIES, OPERATING TIPS AND DEMO TAPES WILL BE AVAILABLE AT THEM MEETING

DON'T FORGET THE TUESDAY ACTIVITY NIGHTS ON 144 MHZ AND THE GROUP'S SUNDAY MORNING NET ON 146.550 MHZ FM STARTING AT 11.00 AM.

--SUBMITTED ON BEHALF OF RICHARD SOULIE VK2ARS

The next meeting of the Liverpool & Distict Amateur Radio Club will be held at the Scout Camp on Cambridge Road Glenfield on next Wednesday the 13th of November at 7:30 P.M. for a prompt 8.00 P.M. start.

The lecture this month will be on amateur TV and will be delivered by Dave VK2GIO who will also display some amateur TV gear. Visitors are encouraged to attend this lecture and tea coffee and bickies will be served.

The directions on how to get there are:

Cambridge Road runs off the Southern end of Moorebank Road (the road through Holsworthy Army Camp). A LADARC sign will be placed near the road side in front of the entrance gate to the Scout Camp.

-- Gary VK2TSR for the Liverpool & District Amateur Radio Club

The Hornsby And Districts Districts Amateur Radio Club. Inc.
The next meeting of the Club will be held on Tuesday the 12-11-1996. at 8:00 P.M. it is the informal mid-monthly get-together, where at the
Mt Colah Community Centre.
Pierre Close.
Mt Colah.
(Near the Eastern entrance to the Railway Station.)
The Club will be running classes in 1997 for the Amateur Radio Certificate of Proficiency, commencing early Febuary, with examinations being conducted at the conclusion of the classes. If you would like to know more about the classes, give Tony VK2BTL a phone call on 9487-3383.

If you would like more information on becoming an Amateur Radio Operator, or the Club in general write to :-
HADARC. Inc.
P.O. Box 362.
Hornsby 2077.

Or you may also phone the Publicity Officer, John VK2WRT on 9807-2490
Remember the Club Net on Monday nights on the Club repeater VK2RNS the frequency 147.250 with a positive offset, all are welcome, we would like to hear from you, or maybe see you at one of our meetings.

--Submitted by John VK2WRT, Publicity Oficer.

SUMMERLAND AMATEUR RADIO CLUB
A BIGGER THAN EVER GRAND COMPUTER EXPO IS PLANNED FOR
30TH., NOV. AND 1ST., DEC., AT THE LISMORE CITY HALL.
TWO DAYS THIS TIME, BY POPULAR DEMAND.

ALL THE LATEST IN COMPUTER TECHNOLOGY, PLUS OTHER
ELECTRONICS AND COMMUNICATIONS DISPLAYS.
MOST OF THE REGIONS LEADING SUPPLIERS WILL BE
REPRESENTED AT THIS EXPO.

BRING AND BUY TABLES WILL BE AVAILABLE FOR PRE-LOVED
GEAR.

SEE THE INTERNET IN ACTION. TRY IT OUT FOR YOURSELF.
REFRESHMENTS ON SALE DURING THE DAYS.

SEVERAL LUCKY DOOR PRIZES WILL BE DRAWN OVER THE
PERIOD.

DOORS OPEN FROM 9-3OAM TILL 4-30PM., EACH DAY.
ADMISSION $3, OR $5 PER FAMILY.

CHECK OUR CLUB BBS VK2SRC-2 VIA VK2RPL-1 668900, FOR
MORE INFORMATION, OR PHONE - FAX JOHN, VK2JWA, ON 066-
215217.

--GRAEME, VKZGJ, PUBLICITY OFFICER.

FISHERS GHOST AMATEUR RADIO CLUB
The Fishers Ghost Amateur Radio Club will be holding it's next Club meeting on the 19th of November at the usual venue...which is the Campbelltown High School...Via Chamberlain St.

The lecture come demonstration will be given by Mr Anthony Sinclair.. If you interested in early..inovative radio...this will interest you.. For the (lets say) older hams..this may bring back some memories...and for the newer hams in the hobby this will be an experience to see how it used to be done....No magic little black box stuff here...

Come along as this will be a demo you won't want to miss..

Catch up with those you haven't seen for a while ..have a brew..stay for the show...

The Lecture and demonstration will commence at 7:30...

The Club has also set up a PMS on 147.550 Mhz for the Packet users....
The system is set up so you may leave personal messages..or messages to the club members..All are invited to use it and to leave reports, messages, upload or download to and from it....But please remember it is a club PMS and not a BBS...it is not connected to the ouside world via other BBS's or Gateways etc..

--Jim Zenner VK2LJZ, Club Secretary

The MANLY-WARRINGAH RADIO SOCIETY will hold an Extraordinary General Meeting this coming Wednesday, to discuss a matter of considerable importance to the club. There will be just one motion on which to vote, after which the meeting will close and the EGM will become a BYO BBQ...

The meeting will be held at the home of Marque Crozman VK2ZLZ, instead of at the club rooms. Marque will provide the fire; those attending the meeting can bring along whatever they'd like to eat and drink. As usual, call in on the club 2m repeater on 146.875 MHz if you need directions.

Next week's lecture will be given by Des VK2TGJ who will tell us all about the Citizen's Radio Emergency Service Team (CREST), the CB counterpart of WICEN.

-- Richard Murnane VK2SKY

ORANA REGION AMATEUR RADIO CLUB BI-MONTHLY MEETING
The Orana Region Amateur Radio Club bi-monthly meeting will be held on Thursday 28th November at 8 pm in the Scout Hall Talbragar Street Dubbo.

You have noticed the planting of Kilometres of glass out this way and wondered what telecom is doing this for. Well if you come to the meeting you will hear from one of telecoms employees how fibre optics work and ask questions on what you have been wanting to know for a long time on this communication medium..

Can't tell from your address what part of the country you are in. Get a copy of QST the ARRL magazine. It will have a list of section managers for your area - usually on page 8 or 11. Contact the section manger for clubs in your area, many run classes for Novice and Technician (the entry level licenses). These clubs will be happy to introduce you to Ham Radio. Also check into the ARRL page at http:/www.arrl.org that will answer most of your basic questions. Ask your question directly to the ARRL, their E-Mail address is info@arrl.org

Message-ID: <01bbce51$be7f30a0$614578cf@d011b>
Source record: 213167

There appear to be several idividuals who have recently started their own "clubs" for the purpose of seeking multiple vanity call signs. One is listed with a San Juan Capistrano address, yet another with a La Mirada, California address. Today, another has claimed three 1X2 calls in Reno, Nevada.

Does anyone know if this issue is being addressed with the FCC?

Try connecting your hot lead to the battery itself and not through the fuse box (if you don't have it this way already). Then you need to make sure that you have found a GOOD place to ground your radio. If you still have trouble, try using a high quality noise filter. Most of the time a good power connection will solve noise problems.

Oh, one more thing...make sure that your noise blanker is turned on. More times than once I have started getting a noise problem, only to find that the noise blanker got turned off somehow.

Good luck and happy DXing!!

mrbill

558. FT-1000D Questions

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-09 00:00:00 UTC
From: "James M." <james119@iu.net>
Message-ID: <32850A54.3B9C@iu.net>
Source record: 213174

Just bought Yaesu FT1000D (NOT the MP). So far, am quite pleased, but I am beginning to notice a few problems, and would like to know if anyone else out there has seen these and has obtained fixes for them. Are there any service bulletins related to these that anyone knows of? :

(1) Very audible blower noise. Apparently a common complaint. Mine makes a slight "groaning" noise as it comes on and turns off. Most people say "get used to it" or "use headphones" but I don't care for either answer.

(2) Audio intermod/distortion when copying CW, if there are a large number of strong CW signals in the passband (like a pile up). Mostly when on 250 or 500 hz settings. Normally not noted when copying only one signal. Yes, the NB is OFF when this happens.

(3) Slight AGC overshoot, i.e. AGC attact time is a bit slow causing some audible distortion right at the onset of a voice peak. (This could also be the cause of (2) above).

(4) NB really doesn't seem to work that well. Distorts voice signals when adjusted high enough to blank line noise. (may not be adjusting it right.)

I've checked the two Yaesu FAQ news groups and no hints there. ANy help out there? Any other discussion regarding the FT-1000D?

Thanks,

Jim N4BE

: Club calls really aren't necessary at all. The Club can use the call
: of the station trustee. In a contest senario they can use any call of
: any of the club members (with their permission). My vote is to get
: rid of Club Calls.
: de KN0Z Gary

Amen. Clear thinking AND common sense. A rare commodity these days
indeed.

All 'Clubs' are to be limited to 'one' additional call sign period
if at all. No more of this 36 callsigns bullshit. Order them to return
them via the FCC and ARRL *if* the ARRL has any balls left in this area or
at all. Remeber "Callgate"? This is the 90s version of it.

Hey,
Brake down and buy the Kit it only costs $29.00 and it has the new
upgraded s/w and the special cable that has the printed ckt. board
already in it. Yes it is not just a few wires in it, it has some sort of
ckt. that is soldered to the RS 232 connector. Take my word for it some
things are not worth screwing with. Just a word of advice from some one
who has tried it.

Gee, the Icom GP-22 does. That's been on the market for several years.

>Which QST issue was there a home-brew "build yourself
>a super-duper whizz-bang radio" complete with technical schematics?

Must it be in QST? If you'll accept Communications Quarterly instead, look at the lead article in volume 1 issue 1. There are schematics, parts lists, and complete theory of operation for a rig that will work below the audible threshold in the article. And there's not one microprocessor or DSP chip in it, just garden variety parts you can get at Radio Shack. Working below the audible threshold is not hard.

If you're just an appliance operator, then read the QST review of the HAL P-38 where the reviewer states it copied signals he couldn't hear (and I'll back that up with personal experience with my P-38). And check out the article on tests of PACTOR II, Clover, and the rest under severe HF conditions. The PACTOR II box continued to work at -18 db CNR. That's well below the audible threshold. The Clover card worked down to -4 db CNR, and if we accept the QST reviewer's word, that's below the audible threshold too. As a comparative note, most CW operators need a CNR of +10 db to copy 20 WPM. Some EMEers claim that they can detect a signal at -10 db CNR, but that's still 8 db worse than the PACTOR II unit can do. At -10 db CNR, PACTOR II is still doing 50 bps error free (that's roughly 60 WPM).

(Due to protocol timing constraints, PACTOR II can't be used for EME. The maximum delay is 170 mS which is too short for the EME path.)

Note that these units don't fully exploit coherency since they're used with an ordinary receiver. In that sense, they are mere kludges, half measures. Petit showed how even the CW addict can achieve high processing gains if he uses

coherent signals with his CCW system (used to be in the
Handbook). We can apply that to modern digital too, and
the rig in Communications Quarterly does. It'll work at
signal levels where even PACTOR II has to give up, though
the information rate is low.

Note of course that the Eb/No in all cases is positive. Shannon
says we can't do better than -1.6 db Eb/No, and we've only been
able to do +4 db Eb/No in practice (NASA Voyager which exploits
both coherency and coding gain, over 25 years old and still reporting
from beyond the edge of the solar system). But CW ops don't have the
processing gain to work much below the CNR, so for them Eb/No and CNR
are almost the same. Modern digital techniques exploit process and
coding gain to reach way down below the naive CNR and extract a
positive Eb/No (and the information it encodes).

Note I keep saying "modern" but these techniques were understood
half a century ago. They are modern only in contrast to the much
older techniques to which they are compared. VLSI has made them
cheap to implement today. CD players, DSS satellite receivers,
GPS receivers, etc all use variations of these techniques to
give them the high performance that they enjoy. By and large,
amateurs have stagnated on the sidelines of this revolution,
but it doesn't have to be that way. All of these techniques
are within our reach.

And finally, a bit of very good news. The FCC granted TAPR's
SS STA on November 8. This permits TAPR members to experiment
with DS, FH, or combination methods of SS with any spreading
code on any amateur frequency above 50 MHz. No narrowband CW
ID will be required. Check the TAPR website for details.

Wow! HF must be lots more crowded than I figured. 100,000 amateurs
per frequency! Now that's spectrum utilization.

Gary

There's more to being a member of the amateur radio service than
passing the licensing exam. The amateur radio service is a chartered
service with clearly stated purposes and goals. A major part of those
goals is continuing development of knowledge and skills with respect
to radio communications systems. Someone who actively and publicly
states their lack of interest in radio technic is saying that he isn't
really a member of the amateur radio service, regardless of the fact
that he may hold a piece of paper authorizing him to join the service.

That's like someone saying "I passed the SAT, but I don't care to
take any courses at the university, I'm just here to party."

: No, they should not. Too many clubs are merely fronts for one or two
: people hogging callsigns.

Of COURSE they should, let's not be silly. I am the trustee of our club license, and I applied for _A_ vanity call for the club, and I got _A_ vanity call. Why shouldn't I be allowed to do that, Roger?

The bulk of our club's communication is on our 440 repeater, so I requested, and got, W2UHF.

A damned good way to stop abuse of the club call program cold, is to require that a licensed amateur be allowed to be the trustee of ONE and ONLY ONE club license. That'll instantly put a stop to the 2-person "clubs" getting 30 licenses. If you are a legitimate member of two or more legitimate clubs, well, sorry, you can only be the club license trustee for one of them. A microscopic price to pay for maintaining the integrity of the club call program.

Personally, I don't see what ADVANTAGE there is for having 32 callsigns. What does that DO for you?

Just what would that agenda be, Cliff? Dr. Overbeck and the NCRP
(a Congressionally chartered group BTW) and the IEEE and ANSI and
the FCC have a political agenda? What is its purpose? What goals
are this diabolical cabal of alphabet soups trying to achieve?
Who profits, and how, by having amateurs check the field strength
near their antennas?

I know what Bob Park's agenda is, and API is his tool. What's Dr.
Overbeck's motivation? What is his tool? Whose pockets are he and
the NCRP and the IEEE and ANSI and the FCC trying to line? And how
will an RF exposure standard do that? Inquiring minds want to know.

with all the JR calls) has pulled! My first choice was W5JR (initials).
I e-mailed ARRL, FCC and actually got a live person at FCC and they told
me a club could have as many calls as they wanted. Sounds like someone
found a big loop hole and drove a call-gobbler straight through it. Well,

anyway, I probably wound up with a better callsign with my second choice!

Jake Brodsky <frussle@erols.com> wrote:
(snip all)

The original discussion had to do with complaints that the new requirement was based on non-thermal effects. You did not prove that because it could not be proven since it is not true. Now you say that the standard is mostly (or fully) NCRP based. Not true; it is a combination but mostly ANSI C95.1 for Part 97 transmitters. Then you change the complaint to NCRP time exposure limits that are used (i'm not sure if this is true because it is a nit, although I could spend the time looking it up, I suppose, but I won't because it is of little impact). Most amateurs will be in compliance assuming *worst case* time exposure, ie, key down, 100% duty cycle, no turn-off. My residential installation complies according to the modelling tools I have and 1KW complies in most but not all cases. Fine, where I do not comply, I have many alternatives, including analyzing my true time exposure limits. You oppose computer modelling but the alternative *would* put most amateurs off the air because of the consulting costs. These complaints about NCRP are of little impact to amateurs.That's about all I can say Jake; when we model even at worse case, the limits seem to allow most close-antenna situations. They would disallow 1KW into an attic (but usually allow 100W) antenna in many situations. The limits seem reasonable. We should focus our energies on finding ways to 1) comply and 2) perform our modelling. I disagree with what you say on FCC filings (but you will retort taking about EIA's I'm sure, which is simply not a problem for most hams). We need to file nothing with FCC but should be prepared to declare compliance and to show data in the rare event we are asked. It appears that you and Varanelli want the requirement to be more stringent in areas that really *could* be a threat to hams. As things are today, the ruling is not a major threat. EPA wanted it and it could have been MUCH worse.

I don't have a strong opinion about the credibility of the other committee members. This report is, of course, just a conclusion drawn from a literature review. I suspect Park directed the collection and distribution of that material to the committee. I would expect that effort to be somewhat selective by necessity, and perhaps by choice. Almost all of the literature on bioeffects of low level electrical fields is open and available to anyone who wishes to review it themselves, but I don't know that individual committee members did that themselves. Committee chairmen usually have great influence and can guide their committee the way they want it to go.

To directly answer one of your questions, I wouldn't trust any report that was controlled by Bob Park. As far as I am concerned, he has irrevocably destroyed whatever claims of credibility or intellectual honesty he might have had by his past selective use of scientific factiods to fit his political agendas. I don't have any concrete evidence of an agenda at work in this specific case, but his track record on controversal topics isn't good IMHO, so I have a generalized distrust of this report as well.

I can understand how honest and somewhat objective people can dismiss the epidemiological research. Even if done with good technique (and some of it obviously wasn't), there are so many confounding factors which can't be eliminated that the results are at best ambiguous. If the committee's work rests solely on

this, I can see how a "no immediate gross hazard" report could be issued. But I think you and I could reach that conclusion ourselves based on simple observation. But to say flatly "no hazard" is stronger than I would go based just on epidemiology.

(I also tend to think that API members probably aren't qualified to judge epidemiological research, which properly belongs in the medical field.)

The big problem with epidemiology in this case is that there is no possible control group which is exposed to all the risks of modern life *except* low level electrical fields. Everyone is exposed to low level electrical fields today, from *before* birth. We can *not* assume that there is a threshold effect or that effects of exposure are not cumulative. In other words, there may be an elevated level of harm which we can't see via epidemiology because *everyone* suffers from it.

However, there is good solid in vitro work on the effects of ELF E and H fields on cells which is very compelling. I am flabbergasted that Park's committee could dismiss that. E and H fields at very low levels clearly *do* have an effect on living systems. How that translates into in vivo is not completely clear, but a claim of "no hazard" is IMHO both rash and reckless.

The changes observed in vitro would cause the FDA to withhold approval of a chemical which caused them in testing under the Hyde Amendment. (Like many people, I'm somewhat skeptical of the Hyde Amendment, but the point should be clear that perceived hazards which would cause a chemical or drug to be banned are being swept under the rug when the cause is low level electrical fields.)

This smacks of the time when epidemiological research into tobacco smoke was equivocal though there was in vitro work that showed cellular changes. The Tobacco Institute concentrated on the equivocal nature of the epidmeiology and studiously ignored the in vitro work. Note that the harm here in both cases hinges on statistically small numbers of injuries to a large population. There are obviously cofactors at work, and different people have different levels of repair mechanisms operative in their bodies. It is not a gross insult like a gunshot which can clearly be seen in every case.

Note that this is further confounded by the fact that the body reacts differently to different exposure levels, and the response is not always linear. For example, there are some drugs which are therapeutic at a certain dose level but toxic at higher or *lower* doses. We can't *assume* that electrical fields cause a linear response, or a threshold response, in the population. While that is the most common response, no one has proven it to be the case for weak ELF fields.

Based on the research I've reviewed, I'm not willing to say we should tear down the power grid. To me, at least, the benefits far outweigh any perceived risks. However, I am also not willing to say that there is "no hazard". It is clear the fields do have an effect on living systems in vitro. I think that if Park's committee were intellectually honest, the only report that they could have issued about low level electrical field hazards would have been one which stated "we don't know".

(That wouldn't have done much for Park's political agenda, of course. Park clearly wants to be seen as *the* authoritative source on a wide range of controversial topics so that he can use that reputation to leverage his influence when he spouts BS about things he wants to influence politically. And to be intellectually honest myself, I am compelled to point out that no committee likes to return an ambiguous result. It looks like they weren't competent to do the work.)

To answer another of your questions, I don't think that we know enough to talk intelligently about the hazard level of low level ELF fields, nor do I think we are likely to know enough until we know *much* more about the bioelectric nature of cell chemistry. At this point in our knowledge, any definitive statement is simply premature. Revisit this topic in 20 years, and we might be able to give a definitive answer. But it is likely to come from biochemists and not from physicists.

Low level ELF fields are so pervasive that even the conservative advice of prudent avoidance isn't a viable course. Grin and bear it is about the only course we realistically have when it comes to weak ELF fields, unless we are willing to return to the pre-electrical era.

I'd like to note that the question of RF exposures due to our amateur radio activities is very much a separate issue from the ELF generated by the power grid. I think the IEEE and NCRP have done a good job of identifying RF biohazards of *strong* fields, and have set reasonable exposure standards for populations near those fields. We aren't talking about weak statistical links with these hazards. Real harm has been well documented to result from exposures to *strong* RF fields. We can quibble about how much of a safety factor we want to design into our RF exposure standards, but to deny that a hazard exists is just ignorant at this point.

>rid of Club Calls.

Well, I tend to lean toward the idea that a club is an entity, and
having a club call is useful to maintain an identity for that
entity in various operating events. So I wouldn't want to do away
with club calls, but certainly one per club should be the rule.
In fact I thought it *was* the rule. I believe the multiple calls
being discussed are assigned to multiple clubs with essentially
the same membership, IE the extended Roach family. I think *that's*
an abuse, but I don't know of any good way to stop it without
penalizing all small clubs.

I'm not clear on the exact vanity rules here. I know that clubs
could request the call of a deceased member. And that seems
reasonable. I wasn't aware that clubs could request a generic
vanity call. Perhaps that shouldn't be allowed, and clubs should
only be able to get a deceased member's call or a sequential
call. That wouldn't allow clubs to monopolize the vanity calls,
yet would still permit the club to have an identity as an entity.

Frankly, when I found out I couldn't get my preferred call, 'W',
I lost interest in the vanity call program. :-)

Again, and as always, we thank you. This ends the closed circuit with Newsline report number 1004 for release on Friday, November 8, 1996 to follow.

(***** The following is a QST

The FCC explains why it canceled its post card renewal form and more on the ARRL Board meeting in Connecticut. These stories and more on Newsline report number 1004 coming your way right now.

(*****
RENEWALS AND MODIFICATIONS ELECTRONICALLY

The FCC says that it discontinued its from 610 R mail in ham radio renewal notice because hams already have two other options available to them. That of renewing their tickets though a Volunteer Examination Coordinator or remembering to renew by direct mail to the FCC.

In a press release to the Amateur Radio community, the FCC says that back on July 16th, its Office of Operations of the Wireless Telecommunications Bureau issued an Order to permit Volunteer Examiner Coordinators to electronically submit applications for license renewals and modifications. This procedure results in license modification and renewal being granted in one or two days after the Commission receives the data. This says the FCC is significantly faster than would result from submitting these requests in document form.

Now there are some caveats to the new system. The first is that not every VEC is providing a license modification or renewal service. Those that are given the right to charge the applicant a fee for this service. The amount charged is up to the discretion of a given VEC. Hams who do not want to pay a service charge can continue to submit their application document directly to the Commission.

For either procedure, a regular FCC form 610 must be used. This form is available for downloading from the FCC's Internet homepage or by from the Fax on demand system by calling area code (202) 418-0177 from the handset of a fax machine, or from the FCC's forms contractor by calling 1-800-418-3676.

For further information on renewing your ham license, please contact the FCC's Wireless Telecommunications Bureau Consumer Assistance Branch toll free at 1-800-322-1117.

(*****
FCC LICENSE ISSUE DELAY

The FCC's Gettysburg, Pennsylvania amateur license computer system was down for several days the week of October 28th due to programming changes. Because of this, no new amateur license or upgrade grants were released for a period of time.

(*****
VANITY GATE 2 LICENSES PROCESSED

November 5th was not only a good day for President Bill Clinton, but was also good for the FCC's license processing facility and for Amateur Radio. While voters were re-electing Clinton to a second term, the FCC's license processing computer came back to life and the first licenses in Gate 2 of the vanity call sign program were issued.

According to the FCC, the licenses processed in Gate 2 were applications it received on September 23rd. A spokesman at the FCC said the computer system was finally fixed Tuesday, November 5th, and the approximately 4500 first-day vanity applications were successfully run.

The week long computer problems had not only affected the vanity program but also caused the FCC to rescind all call sign grants after October 24 because of widespread errors. In some cases, the FCC's Gettysburg office had reissued call signs that had already been issued. The FCC spokesman said that the unspecified computer problems were not related to the vanity call sign program.

The FCC will dismiss applications if it was unable to grant one of the call sign choices. Applicants who did not get one of their choices will have to apply in writing for a refund of the $30 filing fee.

The FCC has not announced opening dates for vanity Gates 3 and 4.

Hams are asked to be patient and to refrain from calling the FCC license processing facility to inquire about the status of their vanity call sign applications. They say that the Gettysburg Office Consumer Assistance cannot provide further details on the delay.

(*****
MORE ARRL BOARD ACTIONS

More on actions taken by the ARRL Board of Directors at their recent meeting in Windsor Locks, Connecticut. The ARRL will petition the FCC for a relaxation of the rules governing the Radio Amateur Civil Emergency Service. This, to permit stations operating under RACES rules to communicate with non-RACES amateur stations actively engaged in an emergency or drill. An increase in the time limit on RACES drills to five hours per week will also be sought.

In view of the congressional mandate imposed on the FCC to auction the 2305-2320 MHZ band for commercial purposes, the ARRL will seek an increase in the amateur service allocation status, from secondary to primary, in the 2300 to 2305 MHZ segment.

The Board's WRC 99 planning committee will study an ARRL Industry Advisory Council recommendation to extend HF digital privileges to Novice and Technician Plus licensees and report back to the Board. And still on political issues, the directors also adopted revised legislative positions for the 105th Congress.

In matters regarding future hamfests and conventions, the Board declared the theme of the 1997 ARRL National Convention in Jacksonville, Florida, to be Public Service. The Board also proclaimed 1997 as the ARRL Year of Public Service. This, in recognition of the critical importance of public service activities in the amateur community.

Finally, before adjourning, the directors recognized retiring West Gulf Division Director Tom Comstock, N5TC, for his long-time dedication and service to the Amateur Radio Relay League.

The full details on this meeting will appear in the January 1997 issue of QST magazine.

(*****
BREAK AND ENTER

When thieves invaded the construction site of a new high school in James City, Virginia, they made the mistake of using some radios taken in the burglary. This brought out some local ham radio T-Hunters and a quick solution to the crime.

Some of the items stolen were amp probe meter, a foot meter, and a personal boombox. The culprits also obtained 4 Motorola Radius P110 handheld radios with chargers.

Later during the day, contractors advised police that he was hearing young, nonsensical voices on his radio in the truck at the job site. The police asked for and were given the frequency of the stolen portables and pasted this information on to their county radio technician. The county tech pasted this information along to local ARES Coordinator Chris Courson, KC4CMR who then contacted George Ford, K2QIJ who is usually mobile in the area. Chris heard the signal on his extended receive amateur 2 meter handheld and went undercover. Wearing a hard hat KC4CMR and carried an orange traffic through the housing area where he received the best signal with the talky in his shirt pocket with no antenna.

The woman at the motel asked what he was looking for. He replied telling her, he had a report of a sink hole and he was going to put a traffic cone in it for safety. It was only a few moments later that a male voice came up on the suspect frequency saying 'No sink holes found here.' This was Chris's clue he was in the right spot.

Retreating to a local convenience store KC4CMR called the police, giving basic information and requesting a plain clothes detective meet him there. In the meantime George, KC2QIJ had been monitoring from a large store parking lot diagonally opposite the area in order not to be spotted.

While hardly any names heard and false identifiers and conversation from the suspects transmissions, K2QIJ noted that one of the suspects girl friends showed up at another suspects place.

The follow conversation indicated that these two were going over to the other suspects location. While giving this information to the detectives, one of them looked up and saw a young couple walking down the road. When approached and questioned, the young man sang like a canary, as the police captain put it."

As it turned out, the alleged burglars were located only a mile and a half from the scene of the crime thanks to ham radio.

(*****
IRAN COMING BACK ON THE AIR

Iranian hams may soon be heard on the air. The British Broadcasting Companys' Monitoring Service says that the Iranian Ministry of Post, Telephone and Telegraph will soon be issuing amateur radio licenses to Iranian citizens.

The BBC quotes the Teheran based English language newspaper the Iran Times. It notes that the PTT has invited radio enthusiasts over the age of

sixteen to sign up for special training in order to receive an Amateur license.

As previously reported, Iran's PTT announced last year that it was considering the resumption of Amateur Radio in that nation. So far, this is the first confirmation that the Iranian government is willing to proceed in that direction. We will have more DX related items at the end of this weeks newscast.

(*****
HR AND MORE - BACK ON LIVE!

Back on the shortwave bands live on WWCR is The Ham Radio & More Show, hosted by Len Winkler, KB7LPW. Ham Radio and More returned to WWCR shortwave on Sunday, November the 3rd. The live broadcast airs at 6 PM Eastern Standard Time, Sundays, on 5.070 MHZ.

The show lost slot its live about a month ago when WWCR pre-sold all time on transmitter number four to a religious broadcaster. Delayed broadcasts did continue and still can be heard Monday at 1000 hours on 3.210 MHZ.

But hams around the world were not happy having to wait a day to hear the replay of a show that they normally call into live. A letter writing campaign to WWCR took root. It is believed that campaign helped WWCR to change its mind and find a new home for Ham Radio and More on another available transmitter. Ham Radio and More can also be heard live via RealAudio on the Internet, courtesy of KBNP radio in Portland, Oregon.

(*****
LITTLE LEO FIGHT CONTINUES

An update on the fight by ham radio to keep from sharing its heavily populated 2 meter and 70 cm bands with low earth orbiting satellites. Following the initial furor, the so called "Little LEO" threat has slipped from the headlines, but efforts continue to thwart the inclusion of their commercial activities on our popular VHF and UHF bands.

While the Little LEO proponents have not backed off, neither have they submitted any technical documentation to show that sharing with the wide variety of amateur uses could actually work. As a participant in the informal working group, the American Radio Relay League has submitted a 42 page technical paper in late September that details why the League believes sharing to be unworkable. So far, the Little LEO industry had not responded with a technical basis in favor of sharing. With the groups final report due November 15th, the clock is running out to include any sharing studies involving amateur bands.

Unless an attempt is made to short circuit the process -- a possibility that cannot be completely ruled out in the present Washington climate, a U.S. proposal for sharing could not be made in the absence of such a inquiry. Also, under the procedures announced for WRC-97, any U.S. proposal must first be subjected to an FCC notice and public comment

process and must be accepted by the U.S. Department of State and the National Telecommunications and Information Administration.

(*****
SAFEX REPEATER GEAR

More this week on the European built SAFEX 2 ham radio repeater operating from on board the Russian MIR space station. The repeater operates under the call sign RR0DL and a 141.3 Hz access tone access is required to communicate through it. After the repeater has been activated by someone with the proper tone, other stations without tone access can also work through it. It is even possible to use the repeater to contact the MIR crew if one of them is at or near the local control microphone.

The frequency to call up to RR0DL is 435.750 MHZ and listen on 437.950 MHz. Note that this is a 20 MHZ input to output separation and the offset in your radio must be adjusted accordingly. Also remember that you will have to compensate for about 10 KHz of Doppler shift during any given pass of the MIR space station and its SAFEX 2, repeater in space.

(*****
MIR QSL CARDS

Speaking about the MIR. Dave Larsen, N6JLH, is the U.S. MIR QSL manager for contacts made with crew members. QSL cards must include date, time, and mode of contact. Cards for SWL reports are not be handled by Dave. If a contact is made with the MIR packet radio personal message system, then the message number issued should be included on the QSL card.

QSL's must also be accompanies by a business sized self addressed stamped envelope and sent to:

David Larsen, N6JLH
P.O. Box 1501
Pine Grove, California
95665

(*****
SEPTEMBER FUND REPORT - PART II

We begin #2 of our 4 part September report with the North Coast ARC in Cleveland, Frank Schwark II, KC8EQF of Dayton, and Dayton area clubs Farout ARC, Dayton ARC, Huber Heights ARC, and XWARN, the Xenia Weather Amateur Radio Net, who dug deep into their pockets on our behalf. Special mention goes to Charlie Cotterman, KA8OQF, who did the rounds of these clubs, passing the hat. Thanks, Charlie, for going above and beyond. And a truly "Grand" thank you to the Allen County Amateur Radio Technical Society, of Fort Wayne, IN. All I can say is WOW!, and that's with three "o's" You can bet we'll mention your upcoming Hamfest on November 16 and 17th, here, in the newscast.

Moving to Illinois, we heard from Bruce Hammerschmidt of Monticello, the Tri-Town Radio Amateur Club of Homewood, Wilson Bailey, KB9HWH of Chicago,

the Jacksonville Amateur Radio Society, and the Twin City ARC of Champaign-Urbana. From the state that has probably the best NFL team right now, Wisconsin, (sorry, my girlfriend from Oshkosh made me put that in...), we heard from the Falls Amateur Radio Club, and John Leekley, Jr., WB9SMM, both of Menomonee Falls.

We heard from Ron Ayers, K0EEE of Blaine, MN, Donn Fuller, AA0YK of Brooklyn Park, Ray Voss, KG0DK of Edina, Bernard Epstein, W0NXZ of Golden Valley, and Volunteer Examiner Jack Karjala, AA0PI, of Minneapolis. From MO, we heard from the PHD Amateur Radio Association of Liberty, the St. Charles ARC, and the Zero-Beaters ARC of Dutzow.

Remember that clubs that support us with the club name, repeater call, and service area, get a mention during the newscast ID break.

(*****
SUPER-COMPUTER GENIUS DIES

Seymour Cray, who helped develop the earliest computers to use transistors and later pioneered the extremely powerful machines known as supercomputers, died in Colorado Springs, Colorado on October 5th. He was 71 and had been hospitalized since September 22 when he was severely injured in a traffic accident.

Cray suffered severe head and neck injuries in the three car accident on Interstate 25 near the Air Force Academy. Authorities said his Jeep Cherokee rolled three times after it was hit by another car.

Seymour Cray spent nearly 40 years developing the world's fastest supercomputer. For many years, his company, Cray Research was the U.S. leader in a world race to build the fastest machine.

(*****
6Y5XX - PIRATE CALL SIGN

In DX, the Jamaica Amateur Radio association says that the call sign 6Y5XX heard during recent contests is a phony. The organization says via an internet posting that 6Y5XX is not a legal Jamaican amateur radio call. The organization asks if anyone has made contact with this call and has obtained QSL information, to please send that information to 6Y5KW at his callbook address.

(*****
BEACON NET EXPANDS

Also, the worldwide five-band HF beacon network continues to expanded. The Madeira beacon has a new call sign, CS3B, and can be heard on 14.100, 18.110, 21.150, 24.930 and 28.200 MHZ. It transmits for 10 seconds on each frequency in turn in a three minute cycle. Also on the air is KH6WO in Hawaii on the 14, 21 and 28 MHZ frequencies only and JA2IGY on 14.100 MHZ only.

(*****
NOT TOLL FREE

A word of warning. Whether you are domestic or DX, hams responding to advertisements with 809 prefix numbers should be wary that doing so could cost a lot of money. It seems that area code 809 is not toll free. Rather it belongs to the Caribbean and it seems that scam artists are using loopholes in international telecommunications law to make big bucks. Word is that they are billing huge sums of money to callers telephone accounts every time a call comes in.

(*****
CALIFORNIA HAM VANITY PLATES

Closer to home, a Modesto, California radio amateur says that the state should have a vanity license plate available for hams who want to show more than just their call sign. Bill Young, KC6VWO says that it is time for hams in California to let the public know who they are:

"As an ARES member here in Modesto, I'd like to see more recognition of the ham operator, because we have helped out a lot through emergency, crisis, fires, earthquakes, floods. To be more recognized towards the public." KC6VWO

California has long had call letter license plates available to the ham radio community, but these are not the same as the states vanity plates. California vanity plates permit a resident to specify the specifics of a plate as long as it is within good taste and concurs with preset parameters for manufacture. They hold a premium price in addition to the annual vehicle registration fee, but thousands of Californians are willing to pay it. Young believes that hams will to and has started a petition drive to get the state to design a ham radio call sign plate:

"I have contacted Senator Dick Montese, here in Modesto, and he happens to be on the Transportation Board, or a committee for the Transportation Board. And he is very interested in my project. He has helped me right now. He is trying to help get this passed."

If you are a California resident and interested in this project you can get a copy of the petition to circulate at your club by writing:

Bill Young
c/o Ham Radio Plates
P.O.Box 938
Ceres, California 95307

(*****
RADIO STATIONS OFF THE AIR

Were you aware that surprising 245 of the nations broadcast radio stations have been off the air for 6 months or more. This, according to an industry newsletter that says that under the 1996 Telecommunications Act, they will have their licenses revoked if they don't return to the air by February 1997.

By way of example, in Oregon, KSLM-AM Salem, KWSA-FM West Klamath, and KCHQ-FM Altamont could be affected. 1390 KSLM, which had served Salem for

some 60 years, has already been silent for more than a year. Its former two tower directional antenna site now sports a housing development.

An even better way is to simply not issue any club callsigns. Clubs can use the trustee's callsign, or the operator's. No reason to clog up the system with club calls. None whatsoever. And there is plenty of evidence that the system is being abused.

588. Morse Code in Music

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-10 00:00:00 UTC
From: ka3vsp@voicenet.com
Message-ID: <564t3k$73k@news1.voicenet.com>
Source record: 213013

Morse Code in Music

While listening to your favorite music, don't be
suprised if you hear those strange and annoying
sounds of that terrible Morse code!

Case in point, on Joe Walsh's solo album
"Songs for a Dying Planet" is a song titled
"Vote For Me". The song is preceded with Morse
code which pounds out "REGISTER AND VOTE FOR ME AR".
Brian, KF2HC, states that the same message appears
on Joe's first album "Barnstorm" in a song titled
"Mother". Joe holds an Advanced class Amateur license.

Another album worth noting is Roger Waters' album
"Radio Kaos". This album is filled with Morse messages.
Most of the code is underlying the haunting music and
very difficult to copy. The album's cover is littered
with Morse code characters. The album's song titles are
all spelled out in Morse Code!

The rock band RUSH has a song title "YYZ" on their album
"Moving Pictures". This songs starts out with heavy
percussion belting out "YYZ" followed by bass and
guitar blaring out the same. Well, the characters YYZ are
the beacon identifier for the Toronto International Airport.
The inspiration for the song came from Alex Lifeson, the
guitarist for the band, who holds a private pilots license.

Carter Bennett, KI5SR, adds that there is badly formed
Morse code on Kate Bush's album "Hounds of Love".
Carter informs me that the song "Watching You Without Me"
contains the code "SOS". It was also reported that this
track has some RTTY going in and out of tune. KI5SR continues
with information regarding the album "Saving the Wildlife"
by Mannheim Steamroller. He states that there is a track
on the album which sounds too much like "CQ" in Morse.

Charlie, N2JQA, says that there is Morse Code on
Ronnie Montrose's album (Elektra 1982 EI-60034) "GAMMA 3".
The song "Stranger" contains Morse Code which spells
"STRANGER".

Wayne, WA6MPG, states that in 1967, the band
"PEARLS BEFORE SWINE" recorded a song with an adult-rated
CW message in it. The song was titled "MISS MORSE".

The song is said to have vulgarities in it spelled out
with Morse Code. The album was titled "ONE NATION UNDERGROUND".

Randall, KE0YG, provided the following info about Morse Code
in the computer game called "RED STORM RISING" by Microprose.
Randall says that in the opening credits there is music
which contains Morse Code which spells out
"THE RUSSIANS ARE COMING" at about 18 WPM.
Randall says that he can confirm this on the C-64 version
and he believes that the IBM version plays the CW message
in the theme song.

Craig, VK3CRA, reports a TV show called "INSPECTOR MORSE".
Craig has never seen the show but, from info gathered, states
that the inspector's name is never given in the show. It is
alleged, however, to be contained in Morse Code which is played
as part of the show's introductory music.

Howie, N2WX and Mark, KM6XU, claims that "Radioactivity" by
Kraftwerk has lots of good Morse code in it. Mark also states
that the band Missing Persons has a song with some code in it
but Mark didn't supply any info on the song.

A message from John, NI6D, says that there is pseudo Morse
code in the song "Radio Silence" on Thomas Dolby's album
titled "The Golden Age of Wireless".

Dave, N0DET, adds that there is code in the song
"Planet Claire" by the B-52's. In the intro to "Planet Claire",
a kind of Spy vs. Spy mood is created by the music,
and plainly audible CW. The Morse code says,
"NAKS DE CFH I I ZKR F13395 5156 AS 662 ....,", then fades
to music. Dave believes that 'NAKS' and 'CFH' are
commercial station callsigns.
More information pertaining to the code comes in from Ron,
VE3RYN. Ron says that "NAKS" should be "NAWS" which stands
for 'North Atlantic Weather Station' and "CFH" is a CDN
military ship/shore station located near Halifax, Nova
Scotia.

Michael, W9OJ, claims that the words "love you" are
spelled out in morse code at the end of the "Iron Butterfly
Theme" Iron Butterfly. This song is on their first album
"Heavy" and is also on the double album titled "Rare
Flight".

Ian, VK2IAQ, writes in with information stating that
the UK rock band 'Barclay James Harvest' has two songs
which contain morse code. Ian states that the song
"Nova Lepidoptera", a sci-fi song from the 1977 album "XII",
starts off with "UFO" repeated in slow morse code.
Also, the title track of the album "Ring of Changes"

starts with the title sent twice in morse code.
John Lees, the lead guitarist, is a licensed amateur operator
in the UK.

Bill, WA6ITF, reports some really good Morse code on
the CD "SEEK YOU" by Andrew, G3WZZ, and Lissa Huddleson.

Well, that's about it for now. Thanks to all who have provided
me with information on this subject es thanks to all who
have inquired abt the subject.

Anyone with ignition noise they can't get rid of MUST get a
set of "Magnecore" wires they are FAR better than any I have tried
and have cured problems for lots of other people.

Hi !

Many thanks to all who supplied me with informations about South FLA repeaters
by sending lists or pointing me to URLs via E-mail.
I suggest everyone seeking for repeater information about the US to visit

http://www.artscipub.com/repmain.html

You will see a 'clickable' map of the US with the states borders and their
abbreviated names. A click on the desired state sends you a listing about it's
ham repeaters.
Information about a 'major' hamshop in Orlando you can retrieve from

http://www.aesham.com/

Looking forward to visiting south FLA during my vacations in Dec 96/Jan 97 !

Have fun !

592. ABOLISH CLUB CALLS AGAIN!

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-10 00:00:00 UTC
From: "T.J. Alessi" <alessi@discovernet.net>
Message-ID: <32860F0E.145C@discovernet.net>
Source record: 213017

Before the flames start comming:

1. I am the trustee of a club in my town.
2. Yes we have a club call.
3. And yes we are getting a Vanity Club Call.
(W1EE in Memorial of a past member.)

BUT.

In my opinion, ABOLISH ALL club calls, PERIOD. Take them and issue
them to people. Pretty soon all of the good calls will belong to
3 member clubs.

Let DX clubs use a member's call and repeaters use
the call of the Trustee.

Just my opinion.

Source record: 213018

I just wanted to drop a note to say I'm looking to take the Tech test and I was able to find a local ham club by monitoring the 2-m band on my scanner. Finally, after a week of afternoon and evening monitoring, I found the Central GA ARC meeting time on their 146.85 rptr. Thanks to this bit of "intel", I know when, where their next meeting is.

Can't wait to test.

595. Looking for early callbooks

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-10 00:00:00 UTC
From: Wolfango Horn <wolfango@globe.it>
Message-ID: <32868EEE.4176@globe.it>
Source record: 213020

My father, Walter G. Horn - i4MK, an OM pioneer of the radio in Italy and author of technical papers in QST and QEX, is writing a book about the beginnings of radioamateur transmissions in Italy.
Unfortunately, both ARI (italian branch of IARU) and ARRL are not able to provide any callbook of italian radioamateurs operating from 1935 to 1940 in Italy.
Such callbooks were destroyed during the II World War.
He would be happy to have OMs' assistance in looking for them.
He firmly believes such a callbook could be traced, perhaps as a part of international radioamateur callbooks of that period, in USA, so the aim to complete his laborious compilation could be attained.
Thanks in advance. 73 de Wolfango Horn.

Hey Roger, Why don't you give up your callsign and use your best friend's.
No sense wasting two callsigns.

Who's the operator following Roger's rules when the club callsign is on
a repeater.

Obviously the issue here is the abuse of the club callsign system. There's
no need to punish the many because of the abuse of the few.

Yeah, Gary ... and Mike forgets to mention the scenario where a VHF or UHF repeater owned and operated (primarily for vanity's sake) by one of his with-code but knows-nothing-about-theory extra class buddies goes spurious and trashes part of the public safety comm system for a city of a couple of hundred thousand (or a couple of million) ... and the idiot who runs the system hasn't a clue 'cause he spent all his time learning Morse code and simply got lucky on the multiple guess theory test ...

Such people exist ... in significant numbers ... I've met many myself over the years who really don't have a clue about how radio works ... but because they were able to learn the code and memorize a few answers they consider themselves to be "vastly superior beings" ... bullshit!!!

>take any courses at the university, I'm just here to party."
>

Well said, Gary ... that's exactly the point I was trying to make in my
original comments ...

I REALLY like your last sentence ... it points out THE most fundamental
problem we have in ham radio today ... too many "Spicolis" (sp?) ...
remember the film "Fast Times at Ridgemont High" and the character
played by Sean Penn???

We have too many of those characters in ham radio ... they slid through
the testing process by learning some Morse code and memorizing a few
answers, but they really don't know or care about the things they're
supposed to care about ... as you say "they just want to party."
(party=contest, yack, collect 10-10 numbers, etc. ... i.e., things that
have NOTHING to do WITH radio, but rather simply USE radio as a tool)

You are EXACTLY right that these types belong in some other personal
communications service, not in ham radio ... as I said, they're NOT
hams in the sense of T.O.M. and the pioneers who preceeded them ...
they're simply CBers who know Morse code ...

Copyright and Editorial Notice
==========

Last Revised: 6/1/96

Amateur Radio Newsline is a weekly audio service produced by
Newsline, a service of the Westlink Radio Network. Editorial
comment, news items and all other business should be directed to
Bill Pasternak, WA6ITF, Newsline's Producer and Editor-In-Chief.
E-Mail - 3241437@mcimail.com or BILLWA6ITF@aol.com
Phone/Fax - +1 805 296-7180
Fax senders should wait for voice prompt, then press start.

The transcribed version is produced by Dale Cary, WD0AKO
from materials provided by Newsline. and is jointly distributed
to online services and bulletin board networks by Steve Coletti
and Dale Cary.

All others are asked to not post Newsline to any BBS or
network without the permission of Steve Coletti. There have been
distribution problems with many of these networks recently and
posting Newsline to an echoed conference because you haven't seen
it there doesn't mean it hasn't already been seen elsewhere.
Reposting causes wasted bandwidth and additional telephone
charges to be incoured by the sysops of these volunteer networks.

The copyright owner of The Amateur Radio Newsline is Newsline.
Permission to reuse all or part of either this written, or the audio
form requires that the item be taken in it's entirety, not be subject
to any further editing or commentary, and that full credit is given to
Newsline as the source.

Permission is granted to all amateurs who want to transmit the
audio version in it's entirety over nets or repeaters. The text
version may be used for packet distribution as long as it is sent in
its entirety and the BIN header is kept intact.

NOTICE: When Newsline is transmitted in it's full form over voice
or digital forms of Amateur Radio, it is recommended that the closed
circut advisory be deleted. Audio, Computer, and Packet
retransmissions must be made without the editing or deleting of any
other part of the Newsline content. Unauthorized additional
commentary to the original message is also prohibited. To do so is a
violation of copyright and subjects the initiator to legal action by
Newsline.

Newsline may also be excerpted for code practice transmissions,
and may be used as a reference source in bulletin board discussions
under acceptable Fair Use practices.

Any other use is not allowed without the expressed permission of
Newsline.

As I recall, the computer game Wolfenstein has some morse code in one of the advanced levels...never tried to copy it, but it was probably a hint about the game...

Of course, there is also the _Rythm of the Code_ album that presents rythmic morse characters as a learning tool...you should check it out...it's hilarious...

Then there is morse in the movies _Independence Day_ and _Phenomenon_....

Thanks for the list!

Gee! Or maybe aliens from outer space come to undermine our society!

You people take the meaning of "lunatic fringe" to a new level.

(Have you noticed no one has been blaming the ARRL yet?)

As usual, Carl misses the point entirely. (Not entirely unexpected,
either, since he's up on Mt. Olympus and us lowly amateur know-nothing
scumbag mortals are stuck here on Earth).

The fact is, in today's amateur radio society, if it isn't packaged in
an appliance, nobody will buy it. Period.

616. FS: KMA LOG PERIODIC ANTENNA'S 50-1300 MHZ.

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-10 00:00:00 UTC
From: dwhowell@iamerica.net
Message-ID: <32863ab8.4572561@nntp.iamerica.net>
Source record: 213041
Cross-posted to: rec.radio.amateur.antenna,rec.radio.swap,rec.radio.amateur.misc

For Sale,

NOW YOU CAN HAVE AN AFFORDABLE ANTENNA FOR VHF/UHF THAT COVERS ALL OF THE FREQUENCIES BETWEEN 50 MHZ AND 1300 MHZ.

The KMA 4113 is a Log Periodic Antenna that covers all the VHF and UHF frequencies listed above. The antenna is made of high quality aircraft aluminum and stainless steel. The antenna has 30 elements and gives you 10 dbd of gain on the amateur bands. Also, the front/back ratio is 30db.

These are new commercially made antenna's with the Amateur in mind. The antenna performs very well and can be mounted on a pushup pole or tower.

If you are in the market for a ALL BAND antenna, drop me a email. For this week only the price is $167 + shipping. The Tennadyne T-31 costs $240 and the Create costs $309. The KMA 4113 is a higher quality antenna at a price with the Ham in mind. Email me for additional information.

it's my understanding that a call could be 'reserved' for
one year under gate 1, where family member wanted a call
of a deceased family member but did not hold the license
class appropriate for the call... the fcc apparently is
allowing the family member wanting the call one year to
upgrade to the appropriate license class...

I agree Tom. The problem is brought to light when we apply a definition to what a bona fide "club" is. Is it a fraternity of many sustaining (or non-sustaining) members? Is it two brothers who want their own contest call signs?

It seems that we went through this exercize back in the late '70s when the FCC abolished the use of "WR" prefixes for repeater groups. Were there other instances?

-Paul

SB DX @ WW $OPDX.278
Ohio/Penn DX Bulletin No. 278

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 278
BID: $OPDX.278
November 11, 1996
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, KA1GJ, WU1F, K3TLX, N3ED, K4UVT, W5ASP, K7AR, KF7AY, WA8JOC, CT1EEB, D25L/PA3DZN, DF4RD, DL7VOA, DL9GOA & DX NEWS Letter, EA3BHK, F6AJA, G4BUE & DX News Sheet, GM4FDM, OH0XX, ON6TT and SM0CXU for the following DX information.

3B8, MAURITIUS. Jacques, F6HMJ, will be active as 3B8/F6HMJ from 3B8CF's QTH from November 20th to December 5th. After that he will stay at Reunion Island until the middle of December.

4K, AZERBAIJAN. The "DX News Letter" reports to start looking for Axel, DL6KVA (ex Y42DA), to once again be active from the QTH of Vlad, 4K9W. There were no specific dates mentioned. His flight, visa, and also the callsign were all confirmed. Axel will be working CW only and has a very reliable QSL Manager.

5B, CYPRUS. The "DX News Sheet" reports Ted, 5B4OG, is active on 160 meters (1827 kHz) and on 7012 kHz before his sunrise.

5X, UGANDA. Peter, ON6TT, but now active as 5X1T, has finally gotten his low band antenna back and is active now on 80 and 160 meters. He was heard earlier this past week (with a big signal) on 3790 kHz between 2100 and 2300z listening up. Peter reports QSL cards have been printed and are being sent out by his QSL Manager, ON5NT. Peter will be in Uganda until November 27th.
Meanwhile, Joe (ex-9Q5MRC), G3MRC, is active as 5X1P. He has been heard on 15 meters CW (21024 kHz) operating split between 1315 and 1400z. Also, watch the WARC bands. There have been reports of activity on 30 and 17 meters.

A45, OMAN. Thomas, SM0CXU/AB5CQ, was invited by Tony, A45ZN, to operate as a Multi/Single from his QTH in Muscat. He states their sunset is at 1400z, and they will try Long Path (US west coast etc.) on 80 and 160 meters. QSL via: Tony Selmes, PO BOX 981, Muscat 113, Oman

CP, BOLIVIA. Olli, OH0XX, will operate CP6AA in CQWW CW Contest as a Single Op all band entry. QSL via Suite 599, 1313 So. Military Trail, Deerfield Beach, FL33442, U.S.A.

D2, ANGOLA (UPDATE from Alex, PA3DZN). Alex, D25L (PA3DZN), sends OPDX the following: "....upon arrival I've been issued the call D25L. Yes, it could have been shorter (D2L was an option), but I fancied the "5" in there....
Since early October I operated only on three ocassions so far; an hour or so sometime mid-October, a few hours before the WW SSB, and the WW SSB itself. Reason being that I "borrowed" the 10 element rotatable logper overlooking the Atlantic and a TL922 from the Portugese army for these purposes as my own equipment had not arrived yet at that time except for my handcarried TS-50. Also, I wasn't sure where exactly in the country I was going to be so in any event, I could not install my station. Now, however, it has been confirmed that I will go to an area in the south-east of the country, and my own equipment arrived this week as well. I will travel coming Friday, November 8, and with a bit of luck, I'll have my equipment up sometime this weekend. In any case, expect some more activity. QSL this operation via PA3DMH. Looking forward to working you all......." 73 Alex, D25L (PA3DZN)

D44, REP. OF CAPE VERDE. It has been reported that Julio, D44BC, stated that he will be very active during the upcoming CW contest. This is good news for CW operators who still need Cape Verde.

FR, REUNION ISLAND. EA2KL and EA3KLM began the activity from FR5DX's QTH at 1145z on 21295 kHz (Nov. 10th). Look for FR/EA2KL & FR/EA3ELM in the usual DX frequencies. Their short operation will finish up Monday, November 11th, but they may be active a little on Tuesday, the 12th, beacause they fly back to Paris at 2300z that same day.

FT5Z, AMSTERDAM ISLAND. FT5ZG is reportedly on his way to Amsterdam Island. He left Reunion Island on November 5th at 1700 local time. He will pass through Crozet and Kerguelen, then he will arrive at Amsterdam around November 20th. He will be using a TS-450SAT with a R5 antenna and NO AMPLIFIER (but he is looking for any sponsor to send him one !!!). His length of stay will be one year and will work on the island as a Transmission Officier and postman. QSL Manager is F5RQQ: Vigier Jean Marc, 14, rue Paul Helbronner, 38000 Grenoble, France. By the way, this country is ranked 4 in the ALL TIME MOST WANTED LIST!

GD, ISLE OF MAN. The DXNS report Steve, G4UOL, will be active as GD4UOL from November 15-28th (including participation in the CQWW CW Contest, low power). Also, November 29-30th, he will be active as GT3FLH from the "Isle of Man ARS" (from Lhergy Dhoo, near Peel), CW only. QSL via CBA. He welcomes skeds (e-mail: steve@g4uol.demon.co.uk). Steve's WEB page contains zipped text files for each year the GD4UOL operation took place since 1988, software to download photographs of the island, QSLs, etc...., and can be found at: http://www.g4uol.demon.co.uk

GM, SCOTLAND. Tom, GM4FDM, will be active in the CQWW CW Contest as GM6X (as he was in the SSB event). He plans to enter as a SO/SB on 40

meters using a 2 element Cushcraft Yagi at 80 ft. QSL via the bureau or direct to his home call GM4FDM.

HC, EDUADOR. F5LGQ, F6AOI, F6BFH, F6AUS, F9IE are currently active as HC2/homecall until November 15th. They are active from Puna Island which is part Guayas/El Oro Province Group (IOTA SA-034).

QSL NEWS AND INFORMATION.....
Ron Sefton, ZF8AA, who now lives in the Seattle area, was active earlier in the week from Midway Island as KH4/W7VWR. QSL to his home call which is now W7VWR, CBA.

Bill Feidt, NG3K, reports the following QSL info for the PJ9E effort in CQWW SSB last month. This is the same group that has brought PJ1(9)B on the air for the past 8 years. In case you have not heard, Chet Brandon, PJ9EE, passed away the week before the contest. As a memorial to him, they requested and received (at the last minute) permission from Landsradio to use PJ9E in the contest instead of PJ9B. Please note that PJ9E QSLs for 1996 CQWW SSB should be sent to K2SB.

OPDX has been advised that the APO address for 9Q5PA has been closed and all mail is being returned....to sender. If you hear of another route, please let OPDX know, and we will get the word out.....

Jose, CT1EEB, reports that QSL cards from the last summer CQ2I Insua Island (IOTA EU-150) DXpedition are back from the printer. These are full colored 4 photo QSL cards. The direct requests (even if you didn't send an SASE) will be replied direct and should be in the mail sometime this week. No cards have been received from the Portuguese Bureau yet, but those cards should be arriving soon from REP in Lisbon. As soon as they get them, they will be replied the same way.
Those of you who sent the cards to the USA manager, WA1ECA, will be receiving the reply from Frank soon. CT1EEB will send him a package of CQ2I QSLs this next week.
HOW TO REQUEST YOUR CQ2I CARD BY THE INTERNET----> You can request your IOTA EU-150 card by sending mail to: ct1eeb@mail.telepac.pt
In your mail, please write: Your callsign, Date, UTC Hour, Frequency, Mode, both RST reports and please write if EU-150 is a new-one (new Island) for you or not! Replies will be sent via the Bureau. Some might be sent direct considering the Country from where the request comes from....

Need QSL information on a ZP station? Contact Francisco Schubeius, ZP5FGS, former president of the Radio Club Paraguayo at: fgs@infonet.com.py

Ken, WA8JOC, reports the CY0AA QSLS from the June 18th - July 6th operation were received earlier this week in Cincinnati. Out of 10 boxes of QSLs received, 2 have been mailed, and they would anticipate by mid week an additional 2 to 3 boxes would be mailed also. The QSL itself is a bifold style, with 2 different QSL faces, with different scenes (for the discriminating amateur). They will continue to accept

contributions graciously, since the trip did cost more than they had anticipated due to any number of surprises.....

SV5, DODECANESE. Al, K7AR, will be active as SV5/K7AR from November 21-26th, including participation in the CQWW CW Contest. He states he is likely to do a Single Band 20 meter entry, but may do all band depending on propagation. QSL via AA6BB.

TM, FRANCE (upcoming French activities).....
Dominique, F5SJB, will be active as TM5CW from November 16-24th, and also during the CQWW CW Contest.

The club F5KAI will use the TM5TEL callsign for the next Telethon from December 6 and 7th.

For the 1500th year anniversay of the baptisum of Clovis, the station TM6CLO will be active from December 16-25th, only in CW. QSL via F5WA

V2, ANTIGUA.01 Larry, K3TLX, will operate in the all-band Single Operator category from V2 during the upcoming CQWW CW Contest. A contest call is expected but isn't known at this time. There will be some operation the week before the contest. QSL via K3TLX.

VK0, HEARD ISLAND UPDATE. An additional bulletin will be supplied to all OPDX InterNet subscriber.

XZ1N WEB-SITE NOW IN SPANISH. Warren, KF7AY, states that for DXers in Latin America and Spain, the XZ1N web site is now available in both Spanish and English. You are invited to visit either one at:
http://www.getnet.com/~kf7ay/ea.html (espanol)
http://www.getnet.com/~kf7ay/myanmar.html (English)

ZF, CAYMAN ISLAND. ZF2RF will be active during the CQ Worldwide CW Contest in the Multi/Single category, all bands 160M thru 10M. Operators to date include K4UVT (ZF2RF), K9LA (ZF2AY), K9MK (ZF2MK), N5HRG (ZF2HR) and N9NS. Indivudual operators will also be active outside the contest on both CW and SSB during the period November 21 -29th. QSL for ZF2RF via K4UVT at PO Box 231240, Montgomery, AL, 36123-1240 with SASE or via bureau (any addresses for K4UVT other than in Alabama are no longer valid). QSL contacts with individual operators via their home call/CBA.

Hi all,

Yes, like many of those 4000 others, I would really like to know the history of my new call also: W4SV. If anyone has any info, whether from an old callbook or from personal acquaintance, please send me an email. I would greatly appreciate it! :-)

Best regards, Stan

True. I was online that way last night for about two hours chatting with
somefolks checked in via radio.

The following interesting site has a link to the info you need. You will
first need to send an email asking for access. Once your ham call has been
given access you are in. I got my access acknowledgement email about one
hour after asking for it.

You need to be able to telnet to the gateway server.

I say clubs should be allowed a single call. Multiple calls are
an invitation to abuse. The back door around this limitation is
that the clubs requesting calls may not be clubs at all. Take a
look at the infamous "Tucker" collection of vanity calls...

My club, the Pasadena Radio Club, is a real one. We have 150 members,
and meet monthly. We aren't just a repeater club, either. We get
involved in community service work. It's amazing how many places you
can get to play with your expensive toys and still benefit others.

The club call, by the way is W6KA, which was passed to us by
its owner's family after he became a Silent Key.

633. America's Most Wanted...an ham?

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-10 00:00:00 UTC
From: Curtis Wheeler <cwheeler@ricochet.net>
Message-ID: <328597D3.7CC3@ricochet.net>
Source record: 213203

I was watching America's Most Wanted tonighgt as saw a story about the brutal murder of three people, including a five year old boy. I wasn't paying a lot of attention to the details but I believe the incident took place in Florida.

John Walsh quickly mentioned that the suspect had been known to be involved with ham radio clubs. Considering there are what... 700,000 - 800,000 hams in the U.S. now? - You'd think that would have been a potetnially significant audience to alert. If I hadn't been paying just a littel attention during that part of the segment, I would have missed that part of the suspect's profile.

Enough of the comment on the show. Here is the description.

Alan White
Age 26
6'0" - 200 lbs.
Apparently wears size 13 shoes (shoe prints were part of the eveidence found at the crime scene).

I looked around a little bit but could not find anything on the web (even at FOX TV) with photos or other information on America's Most Wanted fugitives. Anyone know where a picture of this guy might be found online?

Regards

Don't get too narrow focused on it being iginition noise.

> > Only apparent in 2nd and 3rd gear, on
> > acceleration. Dissappears when you let off the gas.

Electronic Fuel Injection?

Electronic transmission?

Anti-lock brake System?

Does it have an electronic suspension system?

All this and more are computer controlled and could be a source of
noise.

There is also an issue of Ford exhaust systems (someone mentioned that
earlier). This was apparently a real problem on Explorers for some
people. But I have heard it blamed for noise in other Fords as well.
Did they check with the dealer? They apparently have a "fix" for the
Explorer. Perhaps help is available there.

636. Re: Sparks induced at what RF power?

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-10 00:00:00 UTC
From: daniel@securicor.co.nz
Message-ID: <5645nt$130@wnnews1.netlink.net.nz>
Source record: 213206
Cross-posted to: rec.radio.amateur.misc,chch.chat

: Yes, the medium wave band ones in Christchurch have been from 10 to 60
: kW. And the fence could have good dimensions to pick up the MW band.

Mediumwave broadcast transmitters? Hardly.

My information lists the following stations at the power indicated:

3XG 612 Radio Rhema, 2kw
3YA 675 National Radio Chch, 20kw
3YC 963 Concert Programme Chch, 10kw
3ZB 1098 Newstalk 3ZB, 10kw
3XA 1260 C93FM/Radio Avon, 2kw
3XP 1413 Radio Ferrymead, 100w

FM broadcast transmitters have higher power:

3CCP 89.7 Concert Programme Chch, 40kw
3ZZM 91.3 ZM FM Christchurch, 40kw
3FMX 92.9 C93FM, 40kw
3CCT 96.9 Plains, 3.5kw
3RDU 98.3 98RDU, 500w

: The chch.chat group say that the frequency is ~836 mega Hertz.

The AMPS cellular band occupies 825-845 MHz (mobile transmit) and
870-890 MHz (base transmit). The GSM cellular band uses 890-915 MHz
(mobile transmit) and 935-960 MHz (base transmit).

Hence the ommissions from cellular phones will be in the range 825-845 MHz
(AMPS - ie. Telecom Mobile) and 890-915 MHz (GSM - ie. BellSouth).

A.N.A.R.T.S. News Bulletin 9321 27TH October 1996

COLS COLUMN

IN THE PREVIOUS BROADCAST MENTION WAS MADE OF SOMMERINGS
TELEGRAPH AND HIS FRIENDSHIP WITH SCHILLING, A RUSSIAN
MILITARY ATTACHE IN BAVARIA. SCHILLING LATER RETURNED TO
ST PETERSBURG IN RUSSIA AND CONTINUED HIS EXPERIMENTS,
SUCCEEDING IN INTERESTING THE CZAR. AS FAR AS WE KNOW,
CREDIT FOR THE CONSTRUCTION OF THE FIRST ELECTROMAGNETIC
TELEGRAPH GOES TO SCHILLING. IT IS NOT KNOWN PRECISELY

WHEN HE DID SO, BUT IT IS RECORDED THAT THE CZAR SAW A DEMONSTRATION OF IT IN SCHILLINGS ROOMS DURING MARCH 1830. THIS TELEGRAPH UTILISED A DEFLECTED COMPASS NEEDLE IN THE MANNER SUGGESTED BY AMPERE. SCHILLINGS BACKGROUND WAS MILITARY RATHER THAN SCIENTIFIC AND IN SPITE OF HIS INTEREST IN TELEGRAPHS HE MADE NO COMMUNICATIONS WITH THE SCIENTIFIC SOCIETIES OF THE TIME. HE MIGHT HAVE THOUGHT HIS ASSOCIATION WITH SOMMERING WAS SUFFICIENT. THEREFORE THE ONLY WRITTEN TESTIMONY IS THAT OF A MAN NAMED HAMEL A MEMBER OF THE ST. PETERSBURG ACADEMY OF SCIENCES. HAMEL CLAIMED TO KNOWN SCHILLING PERSONALLY.

THE RECEIVING STATION'S INSTRUMENT EMPLOYED A NEEDLE SUSPENDED BY A SILK THREAD ALLOWING THE NEEDLE TO TURN IN A HORIZONTAL PLANE WHEN INFLUENCED BY THE SIGNAL. THE SIGNAL FLOWED, NOT IN A SINGLE WIRE CLOSE AND PARRALLEL TO THE NEEDLE, BUT IN A LARGE STATIONARY WINDING WHICH SURROUNDED THE NEEDLE. THIS INCREASED THE SENSITIVITY OF THE INDICATOR AND WAS INVENTED BY SCHWEIGGER IN 1820. SCHWEIGGER HAD INTENDED IT BE USED AS A MEASURING DEVICE FOR CURRENT, WHAT IS NOW KNOWN AS AN AMMETER. CHECK YOUR TECHNICAL BOOKS TO SEE HOW THE ''SCHWEIGGER MULTIPLIER'' OPERATES. FOR OUR PURPOSE HERE, IT HAD THE EFFECT OF INCREASING, OR MULTIPLYING A WEAK SIGNAL AND MOVED THE NEEDLE TO A GREATER EXTENT. A LATER DEVELOPMENT OF THE MULTIPLIER WAS THE ''TANGENT GALVANOMETER'', THE FORE-RUNNER OF THE MODERN AMMETER.

A REFINEMENT OF THE MULTIPLIER WAS A MEANS OF 'DAMPING' OR SLOWING DOWN OF THE VIBRATIONS OF THE NEEDLE. IT CONSISTED OF A THIN PLATINA PLATE SUSPENDED FROM THE NEEDLE, DIPPING INTO MERCURY. THIS IS THE FIRST EXAMPLE OF THE USE OF SUCH A ''BRAKE'', THE FORERUNNER OF METERS BEING RENDERED ''DEAT BEAT'' BY SOME SUCH METHOD.

AS MESSAGES WERE SPELT OUT BY RIGHT AND LEFT DEFLECTIONS OF THE NEEDLE, THIS DEADENING OF THE MOVEMENT OF THE NEEDLE SPEEDED UP SIGNALLING GREATLY.

IT SEEMS THERE IS ALWAYS A DOWN SIDE TO SUCH INVENTIONS. IN VIEW OF THE PUBLICITY HE WAS ABLE TO GIVE HIS TELE-GRAPH AND THE STANDING HE ENJOYED IN HIS OWN COUNTRY, IT MAY SEEM SURPRISING THAT RUSSIA WAS ONE OF THE LAST TO USE THE TELEGRAPH. IT IS RECORDED THAT THE CZAR NICHOLAS, SAW IT AS AN INSTRUMENT OF SUBVERSION AND BY A DECREE IT WAS ABSOLUTELY PROHIBITED TO GIVE THE PUBLIC ANY INFORMATION REGARDING THE ELECTRIC TELEGRAPH. THIS PROHIBITION EXTENDED EVEN TO THE TRANSLATIONS OF PRESS REPORTS APPEARING IN EUROPE.

FROM RUSSIA TO ENGLAND AND THE U.S.A. WAS ONLY ONE MORE STEP AND NEXT TIME I HOPE TO BRING YOU 'BARLOWS'

EXPERIMENT WITH THE TELEGRAPH. 73S FOR NOW DE COL.

IPS WEEKLY SOLAR AND GEOPHYSICAL REPORT

18 OCTOBER - 24 OCTOBER

ISSUED 25 OCTOBER 1996

Date 18 19 20 21 22 23 24
10cm 70 71 71 70 70 68 70
A 25 33 14 8 25 31 (10 estimated)
T -4 -23 -38 -12 -13 -37 -15

Solar activity was very low.

The geomagnetic field at Learmonth was unsettled on 18th and 20th October, and unsettled to active 19th and 21st. Active to minor storm levels were present on 22nd and 23rd, reurning to quiet to unsettled on 24th.

Maximum usable frequencies at Sydney were mostly depressed to 30 per cent through to 23rd, and near predicted monthly values on 24th October.

Solar: Very low

Geomagnetic: Quiet to unsettled. Possible active levels on 25 October.

Frequencies: Mostly near predicted monthly values with possible depression up to 30% on 25 October.

NOTES OF INTEREST:

Maldives, 8Q7. EA3BT AND EA3AOK, will be active as 8Q7BT
and 8Q7OK from 23-31 October. RTTY frequencies for U.S.
14085 from 1600-2200z. Asia, 15 meters from 0300-0800z.
Europe, 15 meters from 1100-1600z.

Myanmar, XZ. Warren, KF7AY has announced that final
approval has been received with only a few last minute
details remaining. The group of operators 12, will
arrive in Yangon 16 November, running a special event
station 18 November. 19-22 November, three stations
will be on all bands, all modes CW/SSB/RTTY. 23-24
November, active in CQ World Wide CW Contest from
zone 26 as multi-entry. Some activity before tearing
down 25th.. QSL XZ1N via W1XT direct or bureau.

The VK2SG RTTY DX NOTES are also available on the Internet
at reflector digital-dx(AT)st.rim.or.jp . Check also the OH2BUA
Webcluster at URL <http://www.clinet.fi/jukka/webcluster.html>.

For next week's bulletin send your bandpass to
Jules, W2JGR at W5KSI.(HASHSIGN)NOLA.LA.USA.NA

REMEMBER, DX DON'T SLEEP.
GL DE BOB, WB2CJL at W5KSI.(HASHSIGN)NOLA.LA.USA.NA

>From ARRL Headquarters
Newington CT October 17, 1996
To all radio amateurs

This week's bulletin was made possible with info provided by Tedd,
KB8NW, the OPDX Bulletin, DX News Sheet, The 599 DX Report, the
Yankee Clipper Contest Club and Contest Corral from QST. Thanks to
all.

SWAZILAND, 3DA. It has been reported that two different operations
will be active from here on all bands in the CQWW SSB Contest. One
group will be active as 3DA0DX as a multi/single entry. Outside the
contest, several of the operators will be using various 3DA
callsigns. QSL via WJ2O.

UGANDA, 5X. Gus, 5X1D, has left the country as of October 11. QSL
via SM0BFJ. Peter, 5X1R, is still active. QSL him via SM4ARJ. 5X4F
is back on the air from his QTH in Arua. QSL via his new QSL
Manager, K3SW.

WESTERN MALAYSIA, 9M2. Tex, 9M2TO, reports that he built and
installed a 80/160 dipole, so begin looking for him on these bands.
QSL via JA0DMV through the bureau or direct to Terutsugu Izumo,
Bukit Dumbar Apt. 9-4, 97 Jalan Thomas 11700 Gelugor, Penang Island,
Malaysia

MALDIVES, 8Q. Josep, EA3BT, and his wife Nuria, EA3AOK, will be active as 8Q7BT and 8Q7OK respectively, October 23 through 31. US stations should look for them on RTTY on 14085 kHz between 1600 and 2000z. Asia on 15 meters between 0300 and 0800z and Europe on 15 meters between 1100 and 1600z.

MOZAMBIQUE, C9. Jon, 3DA0CA, will be active as C91CP starting at 1500Z on October 23 to 0500z on October 28. Activity includes the CQWW SSB Contest. He will be on 160, 40 and 20 meters. QSL via W4DR.

SABLE ISLAND, CY0. WA4DAN, AH9B, VK2BEX, and V73C are planning to be active from here October 21 to 29. In addition to the DXpedition, they also plan to operate in the CQWW Contest. QSL via WA4DAN CBA.

ANGOLA, D2. Alex, PA3DZN (aka 9X5EE, 9Q2L, etc.), has arrived in Luanda, and has received the callsign D25L. QSL via PA3DMH.

GRENADA, J3. A group from the Yankee Clipper Contest Club, YCCC, will be active from here on November 16 to 26. Operators are WA1S as J38AA, K1XM as J38AB, W1FJ as J38AC, KM1P as J38AD, KQ1F as J38AE and K2WR as J38AF. Contest callsign unknown at this time. The backup callsign may be J38AA. QSL each operator via homecall. All contest QSLs via KQ1F.

NEPAL, 9N. Jack, W4OSN will be QRV as 9N1OSN from Kathmandu on 80 through 15 meters from October 14 to November 28. He will be using a solar powered Ten-Tec Scout.

TUVALU, T2. Ron, ZL1AMO, is now signing T28RW. Ron hopes to work 160 or 80 meters.

MYANMAR, XZ. The XZ1N DXpedition to Myanmar remains on course. Final approval have been received and all but last minute details remain to be worked out. This will be a large scale operation, with a chance for everyone to have this location in some new and exciting ways. Look for XZ1N to be multi-multi in the CQWW CW Contest. The team departs for Bangkok on November 26.

QSL NEWS AND INFORMATION

Dragan, ET3YU, reports his mission in Ethiopia is about done and that a new QSL route will be used instead of the one in Addis Ababa. Cards for ET3YU should now be sent to Dragan Stojanovic, Dusana Vukasovica 82/20, 11070 Novi Beograd, Yugoslavia.

F5NZO reports he has received the logs from FT5XL for QSOs made between February 13 and September 1 . He will reply to all direct requests as soon as possible.

THIS WEEKEND ON THE RADIO.

The Jamboree On The Air, JOTA, QRP ARCI Fall QSO Party, and RSGB 21/28 MHz CW Contest are all scheduled for this weekend. See October QST page 101 for details.

Society information

The Society may be contacted at : PO Box 860, Crows Nest 2065

>Can someone please tell me who is the main coordinating body for 70cm
>repeaters in So. Cal?
>
>(i.e., what TASMA is to 2m, _____ is to 70cm)

There are multiple coordination bodies for 70 cm in Southern California.
There is actually one named SCARA (sorry I don't know what the letters
stand for). The "main" one, by some folks' definition, is SCRRBA,
Southern California Repeater and Remote Base Association. They live
in a post office box in Pasadena (no phone, no name, no callsign).

You can attend their meetings if you are a member. You can be a
member if you own a coordinated 70 cm repeater. You can get your
70 cm repeater coordinated if you are a member.

Interesting arrangement, isn't it?

>who runs the system hasn't a clue 'cause he spent all his time learning
>Morse code and simply got lucky on the multiple guess theory test ...

Yeah right. Don't you see that the only difference is that technicians
don't have to spend the time learning Morse. You guys "simply get
lucky" too.

>jherman@Hawaii.Edu (Jeffrey Herman) shared these priceless pearls of
>wisdom:

>->Well that's incorrect. My 50's editions of The Handbook use mmF but make
>->no mention of "condensers."

>2. If you are referring to the _ARRL_ "handbook", most of us consider it
>along with the Encyclopedia Britannica as two of mankind's greatest
>monuments to prejudice ever written.

Which just goes to show that you've owned and read THE Handbook. Many
of the circuits that get placed in the HB come from the pages of QST,
written by everyday hams just like yourself.

>3. I'd be a little slower to tell someone they are "just incorrect"
>without doing my homework properly.

I first got bitten by the ham bug in the early 60s and promptly sub'd
to QST, CQ, and 73. No mention of condensers back then, but plenty
of mmFs were thrown about.

>I'd also learn the judicious use of commas in the opening sentence.

Only one could have been used, and that one was optional.

>If I don't, ain't nobody gonna.

With grammar like that you shouldn't complain about a missing comma!

The syndicated talk show, Ham Radio & More, is again live each Sunday at 2300utc, (6:00pm ET), on WWCR, 5.070mhz, as well as live on RealAudio, and many local am/fm stations throughout the country. The show has been on for more than 5 1/2 years now on the broadcast bands.

This sunday, 11-17-96, Stephan Anderman, WA3RKB, of This Week in Amateur Radio, will be the special guest.

Feel free to call-in toll free during the show at 1-800-293-5366, and ask the guest questions or make comments. The fax number is 602-241-1540.

We are always looking for new topics to discuss and individuals to interview, as well as open to suggestions for ideas for future shows. Please e-mail us with your comments.

Lastly, our home page address has changed to
http://www.goodnet.com/~lenwink/hrm.htm
On that page there is a link to the top 10 current "hot issues" in amateur radio. Please comment on them, or add your own "hot" issues. We'll post comments and replies in the future.

The Ham Radio & More Show welcomes the submission of club announcements, hamfest announcements, conventions, special event station happenings, dx'pedition specials, club newsletters, qsl cards, etc. We will strive to announce as many as possible over the air the first sunday of each month, which is our "Ragchew Open Lines" show.

Len Winkler, KB7LPW lenwink@goodnet.com

646. **Vanity Call Multiple calls** READ!

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-11 00:00:00 UTC
From: Robert Bennett <bdbennet@ix.netcom.com>
Message-ID: <566cmu$bbl@dfw-ixnews9.ix.netcom.com>
Source record: 213056

Anyone finding multiple calls issued to a "club" or "Assn" or any other such name, such as the Tucker family in California, print out your findings, cross reference it to the FCC call server, document all of the strange happenings,make copies and SEND YOUR DOCUMENTATION TO EVERYONE... FCC,ARRL, ARRL DIRECTORS, FCC ATTORNIES, anyone you can think of that should see these people for what they are.

There is enough crap out there NOT to have to put up with this too. If you come across any Vanity call sign abuse, let's make it public (after you have checked the FCC server and made sure) and get involved. Put the clamp on this before it goes on into gates 3 and 4.

Presumably all these clubs have their own Constitutions and elected committees. I don't know about the USA but it is a requirement here before a club call can be issued. It has to be a real club. This requirement is checked, only Clubs can hold repeater licences, we don't leave them up to the whims and moods of individuals.

How do you damage the reputation of a Lawer??????????????????????

The only difference I know between a Lawyer, Politician & a Crook is:

1. A politician is Lawyer, who is usually a Crook, who must be elected
to screw the public...

2. A Lawyer is a Crook who knows how the system is used to screw anyone...

3. A crook is a person who hasn't figured out how to become a lawyer or
politician - YET.....!

656. Squiggie II: More Non Insults

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-11 00:00:00 UTC
From: pacrimgolf@kuentos.guam.net
Message-ID: <567m63$g1v@lehi.kuentos.guam.net>
Source record: 213066
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

For about two weeks our favorite poster, Carl The Freedom Fighter, whom we lovingly refer to as Squiggie, was behaving himself, verbally at least. But now he's at it again. For the benefit of future discussions on the subject of who insulted whom, which crop up from time to time, I present the Best of Squiggie Part II - More Non Personal Insults from the Master.

Carl, WA6VSE said:

> a bunch of backward, technically ignorant pro-code people, who for
> the most part, are not as qualified as we are ...

> most of the pro-code crowd that hangs out here are narow-minded,
> ignorant idiots ...

> It is clear from your past posts that you wouldn't understand if I told
> you, and you're a jerk, so this will be my last and final response to
> you ... go blow yourself ...

> BTW ... WRT to your allegation that I would stoop to lying about a
> direct quote ... here's a quote for you "Kiss my ass!"

> Oh, Len, I *SO* want to see these guys (Steve, Mike D., Jim C.,
> and Jim K.m etc.) retested to a *modern, meaningful* technical test
> *without* the answers being published for memorization ... I'd bet that
> most, if not all, of them would cease to be licensed hemmorhoids on the
> ass of ham radio ...
>
> Carl - wa6vse
> carl@ais.net

> Once again, Steve, you are a blithering idiot ...

> That's NOT what I said you blithering idiot!!!

And for the benefit of those who may have missed Part I, Carl also said:

> Your asinine, ridiculous comments leave no doubt that you haven't a
> clue about modern communications technology ... I'm sure I have
> technicians in their mid 20s working for me who know far more than you

> Why don't you just go run a nice warm bath, climb in, and slit your
> wrists????

> ... as opposed to a cowering wimp who is too afraid to say "Why?"
> (like you)

> "Bullshit" is NOT an obscenity ... it is, perhaps, a "mild
> profanity" ... now asshole, that's a bit stronger, though still not an
> obscentity, but it clearly applies to you ...

> YOU lie virtually *every* time you post, you SOB ... you lie about at
> least one thing I've said in every post, not to mention all the
> falsehoods you glibly spread as if they were fact, just because you are
> stupid enough to believe them ...

> Because, you freaking idiot, ...

> No strawman, no FUD, you idiot ...

Now please remember, the above quotes from Squiggie are NOT personal insults. Because ONLY pro code people use personal insults in these newsgroups. Ask Squiggie and Lenny. They will both confirm that fact.

If the pro code people DID use non personal insults like Squiggie does, someone probably would have said something like:

"Squiggie, you are a backward, Morse code ignorant no-code person, who, for the most part, is not as qualified as we are. Most of the no-code crowd that hangs out here are narow-minded, ignorant idiots. It is clear from your past posts that you are a jerk, so go blow yourself. Here's a quote for you "Kiss my ass!" I'd like to see you no-code people have to take a CW test to keep your ham license. I'd bet that most, if not all, of you would cease to be licensed hemmorhoids on the ass of ham radio. Once again, Squiggie, you are a blithering idiot. Why don't you just go run a nice warm bath, climb in, and slit your wrists???? You couldn't. You're a wimp. "Bullshit" is NOT an obscenity ... it is, perhaps, a "mild profanity" ... now asshole, that's a bit stronger, though still not an obscentity, but it clearly applies to you . YOU lie virtually *every* time you post, you SOB, because you are a freaking idiot."

But I haven't seen any pro code people say anything near that yet. The next time somebody feels like accusing somebody else of using 'personal insults', please refer to the above quotes from Squiggie, The Master Of Non Personal Insults, and make sure the insults being referenced are indeed personal, and not NON personal, like the ones Squiggie uses.

If anyone has any questions on the Art of Non Personal Insults, please email Squiggie (carl@ais.net) as I am sure he will be happy to answer them.

>page 11.

Sorry, but I don't keep advertising literature that old around. I only
want the newest and the best. Carl is right. Technology is best. Why would
I want last year's garbage around?

Oh goodie. My Fall/Winter 96 HRO catalog just arrived. <flipping through>
Nope, can't find the GP-22 anywhere.

Let me go check HRO's web site. Yeah, they must have it there. I'll
do an "advanced search" with "Icom" for the manufacturer and "22" in the
model number -- that should find it...

Awwwwww.... All kinds of neat stuff comes back, but no GP-22.

I know. These items were so popular that they sold all of them. There
must be no more anywhere except on the air. That explains all the weird
noises that come out of my radio whenever I turn it on (I thought it was
Spanish, but now I know differently). Or... Oh, I know. You have the
"HRO Super-Secret Spys-Only" catalog. Yeah. That's it. For NSA-approved
"Members Only". That's the ticket.

I don't share the opinion that getting rid of all club callsigns is
common
sense.

> All 'Clubs' are to be limited to 'one' additional call sign period
> *if* at all. No more of this 36 callsigns bullshit. Order them to return
> them via the FCC and ARRL *if* the ARRL has any balls left in this area or
> at all. Remeber "Callgate"? This is the 90s version of it.

This is something I can probably agree with. However I can imagine some
instances in which multiple callsigns for one club may be useful and
appropriate. However the 36 callsign example (or however many there
were
involved) is definately NOT one of them.

Plus, I'm not sure what the FCC or ARRL can do about it now. You could
write
to the FCC proposing a new ruling to limit the number of callsigns one
can
hold as a trustee to one or two. But these silly callsign warehousers
followed
the rules, even if the rules were flawed.

Reply from Magnecor:

The above IS our web site, which will completely change one day,
currently it's managed by our Australian distributors.
Magnecor spark plug wires are all manufactured in Michigan, USA.

Our wires are designed to solve many serious EMI & RFI
suppression problems, and we have helped a lot of people
over the years. But noise from spark plug wires is a complicated
subject. Magnecor spark plug wires are made primarily for race
engines needing EMI suppression and suppression for radio and TV
equipment, although we sell 10,000's sets a year all over the
world that are used on performance street vehicles.

If there is an interest we can post some sort of a technical
article here. E-mail us, or post a reply, if you have any
thoughts on the subject.

I know there are a lot of you out there with mobile ham
radio installations who have serious ignition noise problems.
Obviously, we want to sell our product (and we are developing
some special internet pricing deals) ... but we also
want to be helpful.

Steve Brown

It seems to me that you people are more worried about callsigns than radio.

Perhaps the right thing to do is to reissue all callsigns as simple
numeric sequences. After all, the only reason you even HAVE a callsign
is so that the government can tell who you are. Your fellow hams can
simply use your NAME, right?

Followed the rule? Okay. Maybe. But there is a difference between "the rules" and common curtesy and ethics. It may "follow the rules," but it's downright RUDE to the rest of us.

Personnally, I'm not gonna QSL with ANY of these guys if I ever contact them. Additionally, I will cut off my QSO immediately if I realize I am chatting with one of them.

Anyone else wanna join the multiple-call boycott?!

Let's take a look at the letter, it was written in all caps, considered shouting on the internet.

This guy is excited about getting started (HURRAY) a reason to shout, so it was 100 % correct that it be yelled (in caps). I wish we had some more people that were excited enough about getting into radio, or continuing in the great traditions of ham radio, to yell about it.

Some newbies think all caps is just poor etiquette, not true, it has a meaning, that meaning is yelling which is appropriate when you are excited about something.

Actually I agree with George, the keyboard comment was stupid. Disreguard most of the junk you read on here. These are mostly guys who can't get anybody to listen to them on the air anymore, everyone is bored with them, so they are trying to get attention here on the internet. They think they are so clever, and I'm sure they smile and look like a moron when they post this dribble.

The book published by the ARRL Now you are talking, is a good place to start, you can also go to the ARRL homepage www.arrl.org, and get a listing of clubs in your area. This is usually the best route because

then you can get an elmer (someone to actually help you get started,
pass the test, locate equipment etc.) or at least a few contact names.

All of this is of course if you are in the US, if you are not, then try
and find the appropriate radio organization for your country.

Good Luck, and don't get discouraged, this is a GREAT hobby with MOSTLY
great guys, and the others are easily avoided with a little experience.

I am posting this ad for a fellow collector who doesn't have an internet connection.

He is looking for the filament transformer for the BC610 xmitter that supplies the filaments of the two mercury-vapor rectifier tubes.

The transformer is 110V AC in, 2 x 2.6 V out at 10 amperes. the outputs are on ceramic studs as they need to float from the ground potential.

Do you have this item?
Please send me an EMAIL if you do to LDHONT@ti.com , I will relay the message for you

You can also send him a fax (in Belgium): 011 32 89 714 734, his name is Matt Driessen

He will pay you a fair price, and will take care of the shipping costs of course

Thanks!

I don't know where you plan to use the T1 line, but it will not
travel more than about 5000 feet without a regenerator or repeater
to re-shape and clean up the pulse stream. These devices are usually
powered by simplexing + or - 130 VDC on the cable pairs. Be advised
also that the cable pair may need to be "conditioned" by the removal
of load coils. Ordinary voice pairs are usually loaded cable.

Nah, more like its an empty promise. Sort of like me saying "I'll
support the elimination of the code exam the moment deer start
sprouting flourscent orange fur." Neither your scenario nor mine
is likely to happen any time soon.

>I've also stated several times that I'd even favor retesting existing

Sounds like a catch 22, also sounds like an ideal way to have the entire 440
band to yourself, sounds like it needs and real reorganizing, sounds as if
they have gotten away with this way to long, sounds like we are on the path
of losing this private band if more hams can not have true acces to it.
Sounds like I have said enough Ed Ginsberg KE6BNL.

Two centuries ago, the celebrated historian Edward Gibbon wrote an
epitaph for ancient Athens, one that might also apply to contemporary
America:

"In the end, more than they wanted freedom, they wanted security.
They wanted a comfortable life; and, in their quest for it all,

security, comfort, freedom, they lost it all. When what the Athenians wanted finally was not to give to society but for society to give to them; when the freedom they wished for most was the freedom from responsibility, then Athenians ceased to be free."

I thought that the FCC pre-empted these type of state laws when the
holder of the scanner was a federally licensed radio amateur. I remember
reading this a couple of years back.

Source record: 213095

Does anyone know if the MFJ all band ant tuners will permit tuning the
160 meter band without having a long enough antenna. I have an
inverted V (dipole) thats cut to about 3.8 Mhz, but my big Drake
2 kw tuner only has band switching up to 80 meters, hence not enuff
coil in there to flatten out the coax feeder at 2.2 mhz!. I dont
expect any efficiency factor from the tuner except that it sucks the
RF out of the ICOM rig even when using an 80 meter dipole. Pls
any comments on your results and which tuner you use.

A.N.A.R.T.S. News Bulletin 934 10 November 1996

ANRTS MEETING

There will be a meeting of the Society on Friday 15th November

at the usual venue. We would like to see more members come

along to the meeting so why not contact Col VK2CTD, our

President at his QTHR, ring Pat VK2JPA at work on (02) 0230

3722, or call after hours on (02) 9427 0530.

The meeting commences at 7.30pm, with supper and a chinwag at the end of business.

COLS COLUMN

HERE IS AN INTERESTING BIT OF DX NEWS FROM VK2TQM REGARDING THE FORTHCOMING DXPEDITION TO HEARD ISLAND. IT INCLUDES DATES, LOCATIONS AND THE CALLSIGN WHILE AT THAT LOCATION. THERE IS ALSO THE POSSIBILITY THAT SOMEONE COULD STILL JOIN THE TEAM, AH IF ONLY I WAS A COUPLE OF WEEKS YOUNGER.
I HAVE EDITED THE PRESS RELEASE TO FIT OUR BROADCAST. IF YOU WANT TO SEE THE WHOLE TEXT YOU CAN FIND THE ORIGINAL MESSAGE ON THE PACKET SYSTEM UNDER DX AT VKNET. 73'S FOR NOW DE COL VK2CTD
P.S. THE RTTY FREQUENCIES ARE ALSO GIVEN..
PRESS RELEASE 6 NOVEMBER 1996 FROM VK2TQM AT VK2TGB
Update on the Antarctic DXpedition to Heard Island

We are now just 60 days away from sailing from Reunion Island aboard the Marion Dufresne, bound for Crozet Island, Heard Island , and Kerguelen Island. Half of our gear is already on the ship on Reunion, the other half due to arrive shortly.
We have nearly the entire original team intact, although a recent withdrawal has opened a position. If you or anyone you know is interested, please contact me immediately.
information about the project is web pages at
http://www.ccnet.com/cordell/HI
We are open to the possibility of taking one or two "guest/sponsors." These people would not have any formal duties and would not even have to be licensed radio amateurs, but would be financial supporters and guests for the trip. If

you have any suggestions.... please contact me.

SCHEDULE

The Heard Team schedule is as follows:

DATE LOCATION CALLSIGN

Dec 29-Jan 2 Reunion Island TO0R

Jan 8-9 Crozet Island TX0C

Jan 13-27 Heard Island VK0IR

Jan 30-31 Kerguelen Island TX0K

Feb 6-9 Reunion Island TO0R

this operation in an exemplary manner. Every effort will be

made to ensure the maximum number of QSO's on as many

band/modes as possible while minimising interference to other amateur interests. Your feedback and input through the Pilot operators is critical to this goal. What we learn through this project will aid others in carrying out operations in the field safely and reliably in the future, and will serve as a guide for those to follow. We hope you will enjoy and support this expedition, both with your QSO's and financially and will be proud to say "I helped make it happen!"

Gl de (DX2) Luciano, I5FLN at ZS5S.ZAF.AF

The Ohio/Penn Dx PacketCluster

DX Bulletin No. 277

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, WD5N, KH6BZF, W6RGG, KF7AY, K8YSE, KA8MVJ, W9UI, WA0RJY, EY8MM, G3SXW, G4BUE & DX News Sheet, LU1BR, ON6TT, PS7AB and SM7PPK for the following DX information.

5X, UGANDA. Paul, 5X4F, is planning an all band (160 through 10) Multi-Single entry in the CQWWDX CW Contest from Arua in northwest Uganda. Operators are Dave/KE4EW, Dale/N3BNA and Paul/5X4F. Before the contest, Dave will be operating with the call 5X4DLI. QSL to KE4EW. The QSL Manager for 5X4F is now K3SW.

5V, TONGO (UPDATE). Rodger, G3SXW, (Note the callsign change that was originally announced 5V5A.) reports the 5V7A project for CQ World-Wide CW Contest is just about ready to roll. There are ten operators, six stations and 17 antennas in the multi-multi category: AA7NO, G3SXW, G4FAM, GM3YTS, K5VT, K7GE, KC7V, N7BG, W6RGG, WB7SRW. This is the same team that did TY5A (1995) and 9G5AA (1994). First departures are on November 13th, and the team will travel by road through Ivory Coast and Ghana to reach Togo. There will be some activity before the contest, while the team is testing antennas on various bands using their personal callsigns. They hope to be active on all bands including the WARC bands between November 20-24th. On 160 meters look for them low in the band. All activity will cease at the end of the contest as they will leave for home the next morning.

C21, NAURU (Where will Martti, OH2BH, go next?). The well

known DXer will be heading to C21-land for his birthday and will be active as C21BH. It is interesting that Nauru is the exact spelling of a Finnish word which, according to old popular Finnish wisdom, "it extends life in the spirit of a good life".

HS0, THAILAND. Jack, WA0RJY, will be here from November 16th through December 1st. He plans to be in the CQWW CW Contest as a Single-Op all band entry with the callsign of HS0/WA0RJY or possibly as part of a Multi-Op team, but one way or another HS will be available during the contest.

J6, ST. LUCIA. Bob, W9UI, reports members of SouthWest Ohio DX Association (SWODXA) will be active as J6DX for the CQWW DX CW Contest as a Multi/Single entry. The group will be active between November 19th and December 1st. The group plans to be active on 160-6 meters including the WARC bands with operations on CW, SSB, RTTY and the Satellites (HF).

L75, ARGENTINA. Look for L75AA during the CQWW DX CW Contest. LU1BR and LU2AH are operating this special prefix celebrating the "Argentine Radio Club 75th Anniversary". QSL via LU4AA.

VP5, TURKS AND CAICOS ISLANDS. Dave, WD5N, will be active in the CQWW DX CW Contest (November 23-24th) as VP5EA. He will be active a few days before and after as VP5/WD5N. QSL via WD5N, to 1997 CBA ONLY: 103 Osage Dr., Leander, TX 78641 (or via W5 bureau).

Society information

The Society may be contacted at : PO Box 860, Crows Nest 2065 Australia, for such matters as membership and general enquiries. Enquiries can also be made by packet to the President (Col) VK2CTD at VKWI2, or the Secretary (Pat) VK2JPA at VK2WI.

689. Are HT's that can receive police freq's considered illegal to have in your car?

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-11 00:00:00 UTC
From: Bill Beekman <string@ix.netcom.com>
Message-ID: <3286D460.1230@ix.netcom.com>
Source record: 213099

I live in Michigan, where it is illegal to monitor police freq's via a scanner when in a car in motion. I plan on buying a newer HT which has extened receive, including the local police freqs. Would I encounter any type of problem if I am stopped by a traffic police officer? I do not plan to monitor the police freqs when I am driving. Has this happened to anyone before?

Thank you

Bill

You are so right Jeff. Stereotyping like 'pro code Luddites', 'old farts',
'average techno-ignorant pro-code fanatics', etc. isn't doing anything
for the debates. Besides, stereotyping gives me a headache, it's so
hard to get both ears on the keyboard at once.

From: joyce <joyce@wildfire.com>
Message-ID: <328799EA.2B80@wildfire.com>
Source record: 213104

Hello everyone,

Wildfire needs your help and it takes less than 3 minutes. Call 800-430-WILD.

Wildfire Communications Inc. of Lexington, MA is developing an
Electronic Assistant that works 24 hours a day, 7 days a week.
Through speech recognition, Wildfire understands your spoken commands and
manages all of your telephone-related tasks,screens, routes, and announces
your incoming calls, regardless of your location.
Perhaps most important, Wildfire lets you do all this during
a single call or session.

We need your help in collecting speech samples. In order to train our
'assistant' to understand different voices, we need people to call into our
speech training system and speak various words and phrases by following
simple instructions.

It takes less than 3 minutes.

Give the collection system a call at (800) 430-WILD. Call in from any type
of phone; office phone, home phone, speaker phone and especially cellular
phone.

Please have your spouse, siblings, friends, and relatives call in as well
(18 years and older please).

Every caller is important, so please accept our sincere THANKS in advance.

Call 1-800-430-Wild
Tell other people to call too!

PS- For a full product demo call 1 800-WILDFIRE

>they're simply CBers who know Morse code ...

Well, Squiggie, looks like you finally ran outta reasons for no code HF tickets.
Or maybe you got as sick of listening to yourself as the rest of us did.
If too many of these 'characters' slid thru and are trashing ham radio because
they memorized a few answers and learned Morse code, how many do you
think will slide thru if they memorize a few answers and DON'T learn Morse
code ? Not near as many, huh ? Sguiggie Logic at it's best.

I think you are ready to start you own hobby Squiggie, call it Squiggies Church
of No Code Technical Wizards. I hear there is some farm land for sale cheap
in Waco....

Radio is a tool, Squiggie. Just like a microwave oven or a toaster is a tool.

By the way, what part of ham radio DO you enjoy ? What do you do with ham
radio to relax, when you aren't busy with the crusades ?

Message-ID: <567hud$5d62@bingnews.binghamton.edu>
Source record: 213107

Hi there!

I would like to buy HF transceiver Atlas 400X either new or used. It is for my father who is an amateur enthusiast. He is in Europe and gave me a phone # for a California company Little Giant which supposedly sells this equipment. But when I tried to call them, I found that the number has been disconnected. Does anyone know if Atlas 400X is still being manufactured and where I can order it? Does anybody have any experience with this transceiver? Reliability, performance, etc.? I would be very grateful for any information.

Please, e-mail me at ba05133@bingsuns.cc.binghamton.edu

Thanks a lot!

Jiri

I have heard that the number of questions on the General class exam will increase from 25 to 30 in 1997. Does anyone know if this is true? Or when, exactly, in 1997 this is supposed to occur? Or why?

If true, will the additional questions come from the current question pool?

>before it goes on into gates 3 and 4.

Like it or not, the Tuckers have applied for a number of club callsigns.
Any of us could this. Like it or not, the Tuckers have applied for
vanity callsigns to replace their club calls. Any of us could this.

It is all legal. If we make a big stink about it, we'll just make
the FCC (more) sorry that they ever brought back club and vanity
calls.

Off the top of my head, this probably involves the new fcc regulations about
testing for hazardous levels of rf. Questions will be added for novice/tech/general
exams. ARRL is petitioning for an extension to cope with this aspect and others.

Vast difference I think between lawful and ethical don't you think...
or perhaps you think this is ethical.
Same sort of stupid 'me first' attitude that has seemed to permeate
all parts of society today.

Hi Paul! I used the internet 610V site to apply for my vanity call.
I got my first choice, too!

I noticed that the clock at the site was about 45 seconds slow compared to my WWV clock. My submission time was around 00:04 EDT on the 23rd.

I'd be interested to hear from other internet filers as to what choice on their preference list they obtained. My theory was if I did the typing before the staffers started to key in the paper apps, I might do OK in the deal. I'll never know if it helped, but I'm well pleased with the result.

73 es cul,

Mike - W8MM (ex-WA8MSF)

It's just an opinion, but I've always thought that Marconi got a bit too much credit. Whilst he undoubtedly discovered the communication potential of radio, it is generally accepted that Heinrich Hertz was the first person to "produce" radio, or "Maxwellian waves", as he called them, based on the pioneering theoretical work of James Clerk Maxwell who was the one who realised that radio waves should exist based on work by Biot, Savart, Ampere, and Faraday.

My 610V was submitted several minutes past midnight on the 23rd and I
got my first choice, W2KR (ex WA2VCI). Similarly we submitted our
club's request (only 1 request for our club BTW) slightly after midnight
and also got first choice, W2UHF (a UHF repeater).

I gave up on 75m phone over a year ago. Too many freqencies are "owned", too many "nets", too much rude behavior, too many kilowatt ops grunting, belching and swearing. I've never even heard a CQ between 3850 and 4000. The advanced/extra portion of the SSB band is ok though. Mostly I stick to 80m CW. Nice people, fun ragchewing and sometimes even good DX!

Subject: BA/GB net hoopla!

Hi radio fans!
It was a busy Monday night on 3579.5! The band is in excellent condition
with trans-contenental DX between
NA4G in North Carolina runnig a Heath HW16 and N7TM in Washington state
running a Drake 2C/2NT combo.
Also worked were several stations dropping by for the first time. Stations
on were:

KC5TJG/Geo in Wichita Falls, Texas
W5FRS/Dennis in Texas running a great sounding TCS (look ma, no chirp!)
W5TVW/Sandy in New Orleans running a SR150 into a Henry amp (WWL's second
cousin!)
N2CQR/Bill in Va running a Halli HT37/Drake 2B
VA3RP/Rod in Ontario running a Heath DX60B
NA4G/Bob in NC with a Heath HW16
N7TM/Tom in WA running a Drake 2C/2NT combo
K4MSG/Paul in Va running (classified)
AF4K/Bry in MD running (classified)
WS4S/Conard in TN running HB 6V6->6Y6/R-390A
Also heard calling but not worked was K7FJ.

How about some of you BA/GB ops in exotic DX-lands (KH6/KL7 etc.) make some
schedules with us
for a late-night session so we can work you with our flea-power rock
crushers?

If you want to get in some great CW time with an excellent group of
operators, here is your chance.
Come up on 3579.5 after dark with whatever you can find that radiates a
signal. Wait until someone
turns it over to another op and send your call. With the onset of decent
propagation on 80, even
5 or 10 watts will do fine.
73 all,
de Conard, WS4S

>> Is there anybody out there that has had this problem? If so How did you
>> fix it?

I had the very same experience after having moved into a new home
which we just built. I'd had it wired for good security...

As a result of having just moved in, I didn't have time (or energy) to
put up my 80/40 dipoles where they should have been installed (on the
top of the 72' tower), so I just (temporarily) installed them at 30'
in the top of a tree nearby the house, and right next to the shack.

100W on any band did NOT trigger the security system, however just
about any power output above 100W DID trigger it... I became good
friends (well, not necessarily 'good' friends) with the folks at the
security company really quickly. I had warned them when they
installed the system that it would be in the presence of relatively
high levels of RF and that I wanted it to be 'bullet-proof'.

The security company did come out and changed out several smoke
detectors for a different brand and type. This effort did help a
bit... now, it took about 400W-500W to tick them off, but tick them
off it did.

At this point, I realized that the security company had not one
clue(!) about RF-proofing their systems and there wasn't one person
there who would have understood RF-proofing instructions if they were
printed on their foreheads. So, I did the right thing (that which I
should have done in the first place)... I MOVED the dipoles out 150'
from the shack and on top of my tower. Voila! NO MORE RFI AT ALL!
Even with 1.5kW output... clean as a pin... and still remains so to
date.

So, the gist of this treatise is that if you have a security system, don't expect the security company to be of much help... don't even expect the equipment vendors to be of much help... just move your antennas farther away from the house.

And by the way, if 50W is setting your system off, I'd venture to bet that your antennasystem is either very close to the roof of the house, or very near one side where a LOT of wire runs are situated. Not only is this not a good idea from the obvious effects on the security system, it is probably not within the new (pending) FCC regs regarding RF exposure... you'll probably ahve to move it eventually anyway.

(WHOOPS! I just re-read YOUR message and see that you are using an attic antenna. SEE THE ABOVE PARAGRAPH! You need to arrange for an outside antenna OR be satisfied with 50W RF output... which may still be marginally safe exposure.)

You could try bypassing each incoming sensor lead to ground with a 0.01uF disc ceramic capacitor, or put a 1mH Rf choke the gist of this treatise is that if you have a security system, don't expect the security company to be of much help... don't even expect the equipment vendors to be of much help... just move your antennas farther away from the hous

They apparently only coordinate every 25kHz. There are lots of 12.5kHz
slots between, which industry has no problems working with. We are
supposed to be operating NBFM, right? That's what CTCSS is for! ;o>

W6QS --- comments are my own!

Try:

1 - Maxwell - He figured it out.
2 - Hertz - He made it work

Marconi figured out how to make money out of it.

Just like Edison "invented electric light" long after electric light was
commonly used in public places like railway stations, stadiums etc.
And, Lindberg was the "first American to fly from New York to Paris" long
after several people had flown the Atlantic - hardly anyone remembers the
first guy.

Don't I wish! We need all the tax breaks we can get here. . .

I knew about the university situation as a local Dallas school (SMU) is W5YF. Hard to believe that the FCC managed to avoid "my" call for so long but guess that YR is pretty far down the alphabet and that there really haven't been all that many universities and colleges in W5 applying for club station calls.

Anyway, I am very pleased with the call and have been for the past 25 years. It really swings on CW and the phonetics of Yankee Radio are hard to miss. Plus, for the bands where mention of Yankee is a sin, I use Yellow Rose (of Texas) which always gets a rise.

I was fortunate to have been issued W5LUD in 1946. "Lucy's Under Drawers" for more than more rare dx contact!

Thanks for the note.

Just for the record, the comment above was not intended to be "smart" or to make light of the problem. It stems from the fact that I also used attic antennas when I first moved into this house 6 years ago. I installed 4 full-size dipoles for 80, 40, 30, and 20 fed with a common coax (well, the attic is pretty big, I guess). Running an Icom IC-765 I immediately ran into all manner of RFI with the telephones, intercomm system, etc. I tried all the usual RFI-proofing measures to no avail.

I finally concluded that with a usable r-f power level that I was inducing volts of rf into the attic wiring and that the situation was hopeless. I resolved the situation by simply operating (1) when the telephone was not in use; (2) when the intercomm system could be turned off; and (3) while no one was watching tv.

This is the "trivial" solution, but it allowed me a limited but enjoyable amount of operating until I was finally able to get some outside antennas up. As Tim mentioned, outside antennas are the way (I think the only way) to go. I can now run the IC-765 wide open on any band, any mode, with no RFI whatever, even though some of the antennas are quite near the roof.

So, I apologize if my original post was too brief but it was to the point: if you can't do any better, try to disable the security system while you are operating and hope that no one attempts to break in. That way, you can at least operate a bit until you can improve your antenna situation.

I remain convinced that attic antennas are a great compromise, but primarily in the RFI department. My experience with them as rf radiators has been excellent with much good dx worked.

> KH6JF/ABM6JF

I am using the MFJ 3 KW tuner very successfully with a 1-1/4 wave dipole on 40 meters fed with 450-phm open-wire line. The antenna is about 170 feet long and is fed in the center. I can load the system on all bands 160 and up with the MFJ at the 100 watt level with no problem whatever and no signs of heating or arcing. I use an IC-765.

While I am using open-wire line, I would expect that your coax would work as well.

I am pleased with the MFJ construction and components. Really first class and capable of handling the power.

Not necessarily the ONLY answer. Certainly a good start.

What might also help is installing ferrite beads on every wire
into the control panel - sensor leads, power, everything. Also make
certain that the panel itself is adequately grounded.

Try disconnecting certain zones, switches, etc.to determine just
where the RF is getting into the panel, and work from there.

I run only 100 watts max into an MFJ 949E. I've had my tuner for only
about a year and the inductor switch burnt out. I called MFJ to get a
replacement and they said the switch configuration has changed and I
needed to buy a combination inductor coil and switch for over $30.00. I
said forget it and went to Radio Shack and replaced it with a switch for
less then $2.00. I don't think it will last that long, but for $2.00 I

can buy a lot of switches. Bin working for 2 months so far...

MFJ stands for ManuFactured Junk!

>simply use your NAME, right?
> - Brian

Gee Brian, that would be way too practical. It would also remove a basic psychological reinforcement of the Paternal Brotherhood of Amateur Radio. Without the secret knowledge of Morris and 'Q' signals, as well as callsigns to refer to themselves by, these people might be just like everybody else.

Why don't we build or buy radios that have embedded, non-obtrusive callsign identification built in? This could be as simple as an audio tone generator keyed by a Morris ID'er or a short packet burst tacked onto the end of each transmission. This might have the additional benefit of being able to find a lost radio.

Jim, aka WA7LDV (alpha-numeric sequence issued by the government in 1968)

746. RF getting into home security system

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-12 00:00:00 UTC
From: blackie@gate.net
Message-ID: <568nqe$1f82@news.gate.net>
Source record: 212969

I have a problem in that when I operate on 40 meters I make my home security system send out a panic alarm. Funny, this doesn't happen on 15 meters. Here is what I am running.

Yaesu FT101E barefoot into an attic dipole. I also use an MFJ949E antenna tuner.

Seems that the alarm goes off when I run a CW carrier, or peak SSB power exceeds 50 watts.

I have total perimeter coverage with the security system. All doors and windows with switches, also a smoke detector is wired into the system as well.

There is a lot of wire running through the house so I can see the system could pick up RF pretty easily. The thing is, that I would like to find a a solution to the problem as this dilemma is keeping me off the air.

Is there anybody out there that has had this problem? If so How did you fix it?

Whoops, I forgot that I have two shock/glass breakage sensors wired into the system as well.

Any advice on how to solve this problem will be greatly appreciated.

Thank you in advance,

KT4UT

Happy to oblige:

See April 1994 QST article which chronicles how we (including me)
had the 50 year old NJ "scanner" law repealed and replaced with
a law that all amateurs and scanner enthusiasts can live with.
As I recall, you can see my mug shot as the second person from
the left in the group photo with the governor.

Additionally, I and others fought a set of potentially onerous
antenna registration regulations that the NJDEP attempted to
foist on all fixed radiator sites (that was in 1994 also).

Last (guess that makes at least three... I don't bother to
keep score), I wrote and filed individual comments with the
FCC and authored the coments which were filed by the
Bellcore Pioneer Amateur Radio Club in support of the
federal preemption of state and local scanner laws.

Tom,

The AEA FAX III just needs an HF RX and a computer. It works fairly well for the simple circuit (it is merely a threshold detector), but given good band conditions, you can get great ictures. Try around 9090 KHz for a good signal or check around for one of the East Cost marine WEFAX stations.

Some of them retransmit satellite pictures with a pretty good result. Good luck trying to keep your computer and monitor from generating too much RFI!

Yeah, I think as long as you are a FCC licenced Amateur Radio
Operator, it is perfectly legal to have a scanner or HT that will
recieve police in your car.

I did a YAHOO search for QCWA and asked them for background on my call
which I received in 1971 on the $25/25yr/Extra deal.

Turns out that my call is not listed in any callbook back to the first
one which came out in 1915. So, it looks like I hold an original issue
W5 two-letter call! Not too many of those still kicking these days.

>kc8cwp

About two years ago the FCC issued a premption rder which
specifically excluded all amateur transcievers from any
local or state laws that prohibited having a radio which received
police frequencies. If your HT is truly an amateur
HT which happens to also have police receive coverage (as most HTs
do), then the federal premption should cover you.

Additionally, the Michigan law you should be aware of (according
to the 1991 Listeners Lawbook) is Penal Code 750.508. That law
makes it illegal to equip any motor vehicle with a radio capable
of receiving police transmssions. BUT, the law excludes ALL
licensed amateurs EXCEPT for the noviice class.

So, if you are a TECH or above, the Michigan law does not affect you,
and, since that law was passed, even if you are a novice, the new
federal exemption should protect you (that's easier said than done
when confronted with a cop who thinks otherwise, but a recent similar
case in Kentucky was dropped after the laws were properly made
known to the judge on the case.

If I were you, I'd be sure to keep a copy of the Michigan law AND
your FCC license in the car at all times.

That is a possibility, but I can tell you (as someone who works for a law enforcement agency) that the ARRL may know more about Michigan's substantive law on this subject than the typical trooper. Of course, having an officer's opinion of what the law means can't hurt.

Source record: 212983

EARN UP TO 50 000$!!! ALL YOU HAVE TO DO IS INVEST 5$ AND 5 MINUTE OF YOUR TIME!

THIS IS THE FAIREST MOST HONEST WAY I KNOW TO SHARE THE WEALTH!

Would you like to make thousands of dollars, quick, legally, with NO

CATCH? Then keep reading....please take five minutes to read this

article, it contains a tried and true method to make money. It's true!

You can make up to or over $50,000 dollars in 4-6 weeks, maybe sooner!

THIS IS NOT A SCAM! If you're interested, keep reading; if you're not, I apologize for wasting your time, and the bandwidth.

Here's my story. I have been on the internet for 5 years now, watching

the explosion of Newsgroup and Web use. I have browsed the newsgroups

for since I became a college student (4 years ago), and have seen many

of these "make thousands in 10 weeks" with only a 5$ investment. My

thought has always been "They are always scams, no one makes money but

the people you send your money off to." But like most of us, we will

read these again and again, thinking that their is gold somewhere. Here it is, this article said that you send $1 to each of the 5 names and

addresses stated in the article. Then you place your own name and

address in the article at the bottom of the list at #5, and post

the article in at least 200 newsgroups (there are thousands).

No catch, that was it!

So after talking to friends, thinking it over and over,

even reading different "make money" articles, I figured, I'll try it.

I couldn't believe that this was a real business. Within 7 days I got

some money in the mail (Thank you snail mail). I was definately astounded.

I still was skeptical, and didn't think it would keep up, just a few

dollars. Then the next week, I had more money coming to me from all over.

It just kept comming in, tripling in size and multiplying by 10-20 times the amount that I received that first week. In my first week I received 28 dollars, I was happy I made something. But by the end of the second week I made over $1000. In the third week, it had grew to almost $10,000!
and their is still money in the mail. This is the fourth week and I have made close to $36,000!! I still can't believe it works, but it really does, I can believe the money it has brought to me. And it hasn't stopped.

Let me tell you how this works and most importantly, WHY it works... also, make sure you print a copy of the article NOW, so you get the information off of it, and begin making money.

The process is very simple, and it consists of 3 EASY steps:

STEP 1: Get 5 seperate pieces of paper and write the following on each sheet of paper..."PLEASE PUT ME ON YOUR MAILING LIST. YOU ARE NUMBER 4." Get five $1 bills and place ONE inside each piece of paper that you just wrote on, and fold each piece of paper so the bill will not be seen in the envelope (otherwise, nosey people who like to steal envelopes with money in it will get yours). Put one paper inside the envelope and seal it. Do the same for all 5. You should now have 5 envelopes sealed, EACH have a piece of paper AND a $1 bill stuffed inside of the paper. Make sure those words that were stated above are stated on each paper. What you are doing is creating a service by this, this is RFECTLY LEGAL. Now then, mail the 5 envelopes with the paper and $1 in each to the following 5 addresses: (Remember: These are real people like you and I!)

1. Fernando Raposo
Rua 1 de Maio, 35
7780 Castro Verde
Portugal

2. Robert Beckman
6 Heretaunga Avenue

Auckland
New Zealand

3. Aaron W. Robinson
947 Iglehart Ave
St. Paul, MN 55104

4. Tan Ly-Ann
36A Dunearn Road
Chancery Court #01-02
Singapore 309426

5. B. Bourque
RR#1 Box 3040
Cocagne, N.-B., Canada
E0A 1K0

STEP 2: Now take the #1 name off the list that you see above, move the other 4 names up (5 becoming 4, 4 becoming 3, ect.) and put YOUR NAME as number 5 on the list. You can slightly alter this article if you need to, editing what you need to edit. Spice it up if it works, that's where it is all at!

STEP 3: Post your amended article (with your name at #5) to at least 200 news groups (I think there are close to 18,000 of them). All you need is say, at least 200.

********** Netscape 3.0 instructions **********

HOW TO DO THIS: If you have Netscape 3.0 do EXACTLY the following:

1) Click on any news group like normal, THEN click on 'TO NEWS', which is on the far left when you're in the newsgroups page. This will bring up a box to type a message in.

2) Leave the newsgroup box like it is, CHANGE the subject box to something flashy, like, "NEED CASH $$$ READ HERE $$$" or "FAST CASH"!!! even something like "Honest Ca$h from the NET" or "Make Money the Right Way"

would work

3) Tab once and you should be ready to type. Now, retype (only once) THIS whole article WORD FOR WORD, except to insert your name at #5, and to remove #1 off the list, plus any other small changes you think you need to make. Keep almost all of it the SAME!

4) When you're done typing the WHOLE article, click on FILE in THIS BOX, RIGHT ABOUVE SEND, NOT WHERE IT SAYS NETSCAPE NEWS ON THE FIRST BOX. Click on SAVE AS when you're under FILE. Save your article as a text file to your C: or A: drive. DO NOT SEND OR POST YOUR ARTICLE UNTIL YOU DO THIS. Once saved, move on to number 5 below.

) If you still have all of your text, send or post to this newsgroup now by just clicking send, which is right below FILE, and right above Cc: .

6)Here's where you're going to post all 200. OK, click on any news group then click on 'TO NEWS', again in the top left corner. Leave the NEWSGROUPS BOX alone again, put a flashy subject title in the SUBJECT BOX, hit TAB once you're in the body of the message, and then click on ATTACHMENTS, which is below the SUBJECT BOX. You will get another box to come up. Click on ATTACH FILE, then find YOUR file that you saved; click once on the file, and then click OPEN' now click on OK; if you did this right, you should see your file name in the attachments box, and it will be shaded green.

********** Mictosoft Explorer Instructions **********

IF YOU USE IE EXPLORER IT'S JUST AS EASY... HOLDING DOWN THE LEFT MOUSE BUTTON, HIGHLIGHT THIS ARTICLE. THEN PRESS THE "CRTL" KEY AND THE "C" KEY AT THE SAME TIME TO COPY THIS ARTICLE. THEN PRINT THIS ARTICLE FOR YOUR RECORDS TO HAVE THE NAMES OF THOSE YOU WILL BE SENDING $1 BILLS TO. NEXT GO TO THE NEWS GROUPS AND PRESS "POST AN ARTICLE", A WINDOW WILL OPEN. TYPE YOUR HEADLINE IN THE SUBJECT AREA AND THEN CLICK IN THE LARGE WINDOW BELOW. PRESS "CRTL" AND THEN "V" AND THE ARTICLE WILL BE PLACED IN THE WINDOW. IF YOU WANT TO EDIT THE ARTICLE, DO SO AND THEN HIGHLIGHT AND COPY IT AGAIN. NOW EVERYTIME YOU POST THE ARTICLE IN A NEW NEWSGROUP YOU ONLY HAVE TO REPEAT "CTRL" AND "V" AND PRESS POST.

7)That's it. Each time you do this, all you have to do is type in a different newsgroup, so that way, it posts to 200 DIFFERENT newsgroups, you see? Now you just have 199 to go!! (Don't worry, each one takes

about 30 seconds, once you get used to it) REMEMBER 200 IS THE MINIMUM.

The more you post the more money you will make.

AND THAT'S IT!!! THAT'S THE ONLY 3 STEPS THERE IS!!!

You are now in the mail order business and will start recieving your $1 envelopes from various people all over the world within days. HINT: THE MORE NEWSGROUPS YOU POST TO, THE MORE MONEY YOU WILL MAKE. You may want to rent a PO Box eventually because of all the mail. Just make sure all the addresses are CORRECT, please.

LET ME TELL YOU WHY THIS SYSTEM WORKS!!!!

Out of every 200 postings, let's say I ONLY receive 5 replies, which is actually VERY LOW. So I made 5 dollars with my name at #5. Now then, each person who just sent me $1 makes, say only 200 postings, now with your name at number 4, WHICH IS A TOTAL OF 1000 POSTINGS, not including yours too. 50 people send you $1 now; thats $50 you just made! Now, then your new 50 agents post 200 each with YOUR NAME AT NUMBER 3, OR 10,000 POSTING (50x200). Average return is 500 at $1 each is $500. They make 200 postings, which is 5,000 returns at $1 each, which is $5000 dollars! And finally, 5000 people make 200 postings wach with YOUR NAME AT NUMBER 1. YOU NOW GET A RETURN OF $50,000 BEFORE YOUR NAME DROPS OFF THE LIST. AND THAT'S IF EVERYONE MAKES 200 POSTINGS ONLY, AND IF ONLY 5 PERSONS RESPOND!!!!!

When your name is no longer on the list, you just take the latest posting that is appearing in the newsgroups, and SEND OUT ANOTHER $5 TO THE NAMES ON THE LIST, PUTTING YOUR NAME AT 5 AGAIN. And start posting again. The thing to remember is, do you realize that THOUSANDS OF EOPLE ALL OVER THE WORLD ARE JOINING THE INTERNET AND READING THESE ARTICLES EVERY DAY, JUST LIKE YOU ARE RIGHT NOW!!! So can afford $5 dollars to see if it really works? I think so.....

This is the perfect time, when we have a world full fo people who are looking to get wired, and this is one of the best ways to make money because it is still fresh and new to the people getting on the internet, and even many seasoned net cruisers looking to make an honest dollar.

One of my friends asked me how I know this isn't played out. I answered

him with the fact that new users are rushing to get onto the internet

every day, and they are all finding the web, and newsgroups when they get

on. How many do you think are honest people and honest users who are

willing to give this a try. Even low estimates are that 10,000 to 25,000

new users are joining onto the net, and literally THOUSANDS will be

joining to read Newsgroups. Remember, play FAIRLY and HONESTLY

and this WILL WORK, I PROMISE YOU!!! You just have to be honest. Make

sure you print this article out RIGHT NOW, also, try to keep a list of

everyone that sends you money and always keep an eye on the newsgroups

to make sure everyone is playing fairly. REMEMBER, HONESTY IS THE BEST

POLICY. YOU DON'T NEED TO CHEAT THE BASIC IDEA TO MAKE MONEY!! GOOD

LUCK TO ALL AND PLEASE PLAY FAIRLY AND YOU WILL REAP THE HUGE REWARDS FROM THIS, WHICH IS TONS OF EXTRA CASH!!!

THIS IS THE FAIREST AND MOST HONEST WAY I HAVE EVER SEEN TO SHARE THE

WEALTH OF THE WORLD WITHOUT COSTING ANYTHING BUT OUR TIME!!!
Thanks, and really believe this one, it works.

Not sure what IS going on there, but last time I checked,
the only ones allowed to operate at that frequency were
13wpm coded generals/advanced and 20wpm extras.
So what's the point related to dropping the CW requirment?

If a tempest type system can read a computer screen
at a distance (corporate espionage etc.) what simple
inexpensive device might scramble or block such
a reading.
Just curious. My old computer seems to broadcast somewhere
somewhere about channel 3 or 4 on a nearby black and white
tv.
Is that frequency typical of desk computers? if so what
is the frequency?
Can another tv left on on a certain channel or similar
appliance help to block computer screen from being
detected?

Joseph,
Against my better judgment, I bought an MFJ 'Differential T' tuner a few years back. Thirty minutes of about 800 watts on 75 meter SSB caused the roller inductor to melt. The antenna being used was a vetical which was resonant on 80 meters in the CW part of the band. The tuner was rated at 3 KW (ha ha).
The only thing I know of that is worse than MFJ's equipment is thier service. They sent me a 'new' roller inductor, packaged in a plain white box that someone had written 'REJECT' on the side of with a red marker. It wouldn't even roll, wobble would be a better description. So I sent it back and they sent another one, which did roll, but not much better than the REJECT.
I still have the tuner, it works fine with about anything you plug into the back of it for an antenna, but I don't trust it with more than 100 watts, and I'm pretty sure MFJ won't replace a pair of 3CX800A7 tubes if the damn thing melts again when I'm not looking.
I have noticed they advertise an 'air core' inductor now, so maybe the quality is a bit better, but having seen MFJ equipment over the years, I doubt it seriously.

Nope. Nothing nefarious. I think that people who submitted multiple applications were cheating and should be forced to use 3x3 calls :-). (WAB3XYZ... yeah, THAT would be revenge.)

Perhaps "secret weapon" was the wrong phrase to use. It was more like a fortuitous set of circumstances, and I knew about it because of the "homework" I had done.
I had obtained several of lists of calls that were available, and had done a considerable amount of research on my own. (I've been a ham for 28 years and have ALWAYS wanted a 1x2. I was really, really, really motivated.)

As it turns out, several calls that WERE available didn't appear on many of the lists... including K4CP. The prepared lists missed some of the calls that had recently become available.

Since K4CP didn't appear on most lists as being available, I figured that most people wouldn't put it on their list of 25.
I did, and I got it.

That's all. Not really a "secret weapon" I guess, but a situation that I felt gave me a bit of an edge.

767. Re: HELP Club Problems

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-12 00:00:00 UTC
From: tumino@acsu.buffalo.edu
Message-ID: <569jkj$hek@prometheus.acsu.buffalo.edu>
Source record: 212990

Hello Eugene!

First let me tell you that I am writing this at 5am after a long day at school so excuse my grammer/spelling.

As a 21 year old ham and the V.P. of the University at Buffalo (student body 30,000, about half are commuters) Amateur Radio Club. I can tell you recruiting new hams can be difficult at times.

I think there could be several major factors holding back new younger hams from joining your club.

One of the most prominent problems we come accross in looking for new members if the false precsption that you must be rich to be involved in a hobby like ham radio.

This is no doubt false! You can build a 20$ morse code kit that can talk around the world. Achieving incredible goals with limited resources is one of the main goals of amateur radio in my opinion.

Another problem we have come accross is transportation to meetings, we havent found a solution to this problem as of yet (few of us have cars and buffalo/surrounding area has a lousy/nonexistent public transportation system, not to mention low pop. density when compared to my home, N.Y.C.)

Be sure to involve young women in the club. Our President is a woman and I believe that having young women in the club helps bring in young men (not to mention other young women).
I don't mean to sterotype anyone, but I think that allot of older hams have discounted the fact that there are allot of women out there who are actually technically savvy and interested in technical fields.

Finally, when looking for new hams, be sure to take into account that the average person is much less technically aware than the average ham and perhps somewhat less aware of the technical wonders around him/her than people were in the past. In the past people were surrounded by relatively simple devices (1930s-1950s radios are a hell of allot eaiser to understand than the 1990s pocket televisions, PDAs and internet). Now people are surrounded by extremely complicated devices and are content with their total ignorance of the principles behind these how these devices work and how even simple electronic devices work (go ask people (age 20-40) how a speaker cone works and see what happens).

Keep their ignorance of their surroundings in mind when trying to explain amateur radio to them. Be sure that they dont group amateur radio together with all of those crazy electronic toys that they could never understand, but if ever had the money to buy could enjoy. To rekindle their desire to understand their surroundings i s a truley difficult thing.

Just my late night two cents (excuse my grammer).

If you have any questions or would like to run some ideas by a younger ham (I am 21) to see how they might go over, please e-mail me at:

Bad response below. Panic alarms are active 24 hours a day whether the alarm system is armed or not. You need to get an outside antenna. That indoor antenna is what's causing your problem and there is no cure for it. It's simply rf being induced into the alarm system wiring. I've worked in the alarm business for 20 years and have ran into this a few times in the past. The only answer is an outside antenna and a GOOD earth ground on your rig.

>of you???)

First off, no, it doesn't scare the hell out of me. I doubt the amateur written tests would ever get to be such a barrier that I couldn't pass one. But if they did, so what. I have other hobbies. Ham radio is just a silly ass hobby, it's not by any means an important aspect of my life. You must have me confused with the vanity guys, whos choice of call sign is more important than life itself. I don't own a name tag or t-shirt or baseball cap with my callsign on it. I have a telephone, a cell phone, a computer, and a truck so I don't rely on ham radio as a primary means of communications. If late one nite I am rolling on the floor sweating and in dire need of an HF fix, I can always call a ham and ask him which wire to cut in one of my radios to do the "MARS mod" (secret ham lingo for make the radio play on 11 meters). I met a guy a few years ago who has more countries confirmed on 11 meters than I do on the ham bands anyway. But if I cease to be KH2D I will still be me. No biggie. So no, I'm not scared.

What I was trying to point out is that your current line of logic seems to be counter productive to your old doctorine about bringing in millions of new bodies. If you make the written tests too hard, and start retesting existing hams with harder tests, you may just wind up gaining a few EE's but loosing a bunch of dentists, shoe salesman, sanatation engineers, etc. whos main interest in ham radio is communications application and not communications theory.

>FWIW to you, I am doing some research/design work ... at the present

That sounds great. At least you are doing something you enjoy once in a while besides razzing the old farts. What's a 'mizer', is that some new kind of super cheap circuit ?

Hi George! The W?Y? series of callsigns were formerly reserved for
educational institutions. My alma mater, University of Cincinnati, was
issued W8YX long ago and still has it. You have a previously unassigned
university callsign. Maybe you can start the U. of Fairview and claim
ham radio as a 501(c)3 deduction.

the riffraff out" should listen to this and lots of other HF freqs.
It's clear that the stupidest, most childish people can pass a code
test. So then what's the defense? As far as I'm concerned, let's get
some fresh blood in there and see if we can turn HF into something more
positive. How can it get worse? Right now it is a window only to good
'ol boys, who sit in front of their rigs in their double-wide trailers
in the South smoking heavily, talking about their "amplifars" and how
"aint nobody gonna move me offa this fruquncuh". The only time they are
not on their radios is when they are at a Klan rally. Or, of course,
during the day when they at work on the assembly line.

These are the same guys who say we need the code requirement, by the
way. Of course, this is my opinion and I know it will draw
a few semi-literate rantings. Anyone that wants proof can just tune up
and down 75m any night of the year.

Don't bother with SCRRBA. I don't think they coordinate anything! I've sent them many applications throughout the years to their P.O. box with no results at all (a big waste of time).

So I just put up the repeaters anyway, made friends with the co-channels and observed part 97.

Go with a different coordinator and or pick your frequency very carefully. But most of all have fun! This is ham radio.

Yes, it is quite a little scam that SCRBBA has going. The consequence
of their stewardship of 440 in So Cal over the past decade has been the nearly
complete absence of access to 440 by the average ham.

What the heck does this mean? Obviously the repeater would, could, and should use the repeater trustee's callsign. That's what most of them do.
>
>Obviously the issue here is the abuse of the club callsign system. There's
>no need to punish the many because of the abuse of the few.

I would argue that there is quite a bit of need to abolish club callsigns, since vanity callsigns are scarce, and there is damning evidence that the system inherently lends itself to abuse. There is simply no need for club callsigns.

Source record: 212813

This is a new use of the WWW that can benefit ham radio operators throughout the world.

You can now schedule contacts with hams all over the world simply and easily by using the WWW and e-mail.I have set aside a section of my web site http://www.sarrio.com for hams to post their request for over-the-air schedules. Included in each posting is a place to list the posters specific ham radio contact needs (countries, zones,IOTA, grid squares ect...). The postings will also include an e-mail link that will allow hams that read the posts, to easily request an over-the-air schedule.

How Can Cyberscheds work for me?

Do you need a certain state to complete a WAS award? Are you just a few countries away from a DXCC? Are you a QRP operator looking to make contacts with hams all over the world? Are you a DX station that has grown tired of the stateside pile-ups on 20 meters? Or are you going mobile into a hard to work county?

In all the above examples you could have prearranged cyberscheds with those hams that you want to work. If band conditions are poor just e-mail the hams you could not work and set up a new schedule.

Cyberscheds are a simple way to have the internet work to the benefit of hams all over the world.

All posting will stay on-line for 6 months, or until the posting is asked to be deleted. Below is an example of one cyberpost visit the cyberpost page and view them all. Below is an example of one of the postings:

Station: BV/N0IAT

Name: Joe Fitter
QTH: Taipei, TAIWAN Republic of China
Bands: 40/20/17/15/10
Mode: CW (occasional SSB, but not much)

>

I am a member of more than one club, one which got a new vanity callsign in gate 2 (W1BOS, Boston Amateur Radio Club) and one which has had its 1x2 for 70 or 80 years (w2SZ). I don't believe that club callsigns should be eliminated. The clubs are an entity, especially in contesting. The club participates in the contest and the club should get credit for it, not an individual. The W2SZ call has been quite recognizable in VHF contesting for 3 decades. Members come and go, but the call stays. The FCC has the ability to withdraw callsigns. Certainly the calls of the Tuckers and such were not an attempt to get legit calls for legit clubs. Many of their clubs have the same name. Do the clubs have regular meetings or by-laws? I doubt it. And it appears as if there were only a couple of major abusers to the system. Everyone else was ethical about it (or covered it up rather well.) I think that these were just two isolated instances. In fact, the Tuckers really didn't go for good 1x2 calls anyway. The JR guy did (everyone in his club is named JR). For those who want to boycott here are the calls. The only just reward is that they will get 32 times the junk mail from the QSL card companies that comes with a change of license.

ftp://ftp.simtel.net/pub/simtelnet/msdos/hamradio/sbfft11.zip 1032518 bytes

sbfft11.zip Sound Blaster spectral display and filtering

Features:
* Sound Blaster 16 (or 100% compatible) input and output.
* Band widths of 2K, 4K, 8K or 16K Hz.
* Spectral resolutions of 1 Hz to 16 Hz per pixel.
* Display of power spectral density with any of 4 color maps in either
linear or logarithmic scale.
* Define and use as many as to six filters simultaneously -- band pass,
band stop, low pass, and high pass.
* Filters are defined graphically by mouse movement based upon
the displayed spectrum. Once you see a signal, you can
quickly define a pass or stop filter around the signal by clicking
and dragging the mouse.
* Net filter passband is displayed at all times.
* Filters can be selectively enabled and disabled by a single
keystroke.

Special requirements: DOS 3.0 or higher, SB16 or 100% compatible, SVGA,
VESA modes 101, 105, mouse.

Copyrighted Freeware. Uploaded by the author.

>Frankly, when I found out I couldn't get my preferred call, 'W',
>I lost interest in the vanity call program. :-)

But you COULD have. In fact, *I* applied for it, but was too modest to make it my first choice. And since I *did* get my first choice, I'm not too upset about not having that most elusive of calls.

For course, with a call this unique, some other operators on the frequency might be confused. Therefore. the person that got this call would have be to be VERY CLEAR about what he was doing each time he used the call (as some people already do), but by saying "'W' for ID" everything would have been understood correctly.

I'll have to check and see who got that coveted call.

:-)

Carl,
I hate to point out that people, not to mention most radio equipment under $100,000, can not receive your digital modes. Your digital modes are not as reliable as a switch and a coil of wire. You can not build your digital transceiver out of affordable off-the-shelf components. Normal people can not afford to buy a digital transceiver capable of your modes. You must be living in some alternate universe if you think they can afford them. You certainly must be intelligent enough to understand the concept that I pointed out. If you do not understand it then please ask someone who has time to beat it into your brain. It is simple. CW can be understood by People, Humans, you know those tall, two-legged things walking around outside. You need a little box to receive those other digital modes. If you do not have that little box those digital modes are just noise to people. Try to have someone with a little common sense explain my earlier posting to you.
By the way. I never said that CW is better than your digital modes. If you reread my earlier posting you will note that I point out CW is a very poor mode for normal communication. You are right when saying that you should use the modes which will get you through the best. CW is the best in some situations. Without the code requirement it will be very likely that no one that will be able to receive morse code, rendering CW useless. This would create the possibility of some areas where communication is impossible. Areas where there are no high-tech digital transceivers. End the arguing here.

In respone to this nonsense:
> Please explain your alleged basis for this inaccurate assertion ...
> (since it is demonstrated engineering fact that there are digital
> signalling methods which will perform at S/N ratios far below those at
> which OOK Morse can be *heard at all*, let alone copied reliably)

Check out this address. It is the only reference I found from Webcrawler for ChipSwitch. ChipSwitch makes a microcomputer to replace the factory one. It dramatically improves the Uniden HR 2510, HR 2600, and Lincoln. It brings these radios into the modern world of programmable features. It adds repeater offsets, 30 memories, memory tune, seperate VFO, Serial Number in case of theft, and most other features a modern All-Mode HAM radio has.
This is a CB sales company. It is popular in the CB world because it also adds a seperate CB band with priority channels. This company has it listed as a channel mod for the radio. That is the least of its features. I believe you can even order the kit from this web page. It requires good soldering skills. You must replace the original microcomputer with this one. This destroys the original chip.

From: David Norris <kg9ae@surf-ici.com>
Message-ID: <01bbd140$85bba540$1fd2d8cd@kg9ae.surf-ici.com>
Source record: 212920

The HTX-202 will go out of band, but, it only covers 140-149.995MHz. The radio was based on the Icom 2AT BCD radio. I may only be capable of 140 - 150 MHz. I had a MPU glitch on my HTX 202. This glitch resulted in it covering 143-149.9 MHz. I quickly programmed the 149.9 MHz into memory, but, pressed the down arrow accidentally before prgramming the 143 MHz into a mem. There seems to be no RX signal degradation on those frequencies. I would like to know a way to reproduce this glitch reliably. I can not reproduce this event, though. It is similar to the Yaesu FT-470 VFO scan/seek limit trick. It only tunes down from the top frequency and up from the bottom freq. There is hope for those wanting MARS/CAP on the radio. I have the local MARS frequencies programmed into mine for receive-only. The radio does transmit on those freqs at full power. My radio operates up to 149 MHz right now. For those skeptics I would show you a picture of the display, but, i dont have a photo scanner as I am writing.

Apparently the answer is yes. Read below. . .

"The callsigns shown do not appear in our database and therefore
appear to be unallocated. You may request any of the callsigns in this
list from the FCC but there is no guarantee that the requested
callsign will be available by the time it is filed. The FCC requires
that before any of the callsigns listed below become available, that
they must have been inactive for a period of at least 2 years. QRZ
does not maintain the "2 year" aging status of these callsigns and at
present is unable to provide this information. QRZ tries its best to
maintain the accuracy of this data and welcomes suggestions and
comments to aa7bq@qrz.com."

Is it lawful for the Ortega Wireless League to have multiple calls?? This
is just one of many club that Mr. Roach is trustee for and this club has
several calls listed for it. Shouldn't a club have only one call??? Is it
legal if I wanted more then one call listed to my name???
I think he will owe several explanations for these call signs and not to
just a few people that have raised the question. So, Dana, I would ask what
makes you think that all of these "clubs" and call signs are LEGAL??????

Hi Tom,

In article <56a0i2$1uk@news.mhv.net>, From trandall@mhv.net, the
following was written:
> I believe it was Marconi. Correct me if I'm wrong....

You're wrong.<big grin>

Tesla was both 1) awarded the basic patents for radio (the first person
who showed that 2 tuned circuits were needed for transmission/reception)
and 2) Marconi credited Tesla with the invention that made Marconi
famous (Tesla and Marconi were friends).

Of course, electromagnetic waves were known for quite a few years before
Tesla's 1890-era patents -- but weren't much more than a curiosity until
Tesla experimented and codified the material. Tesla even demonstrated a
radio-controlled model submarine using coded pulses in 1895. There were
a whole bunch of 'firsts' in that demo.

Daniel Ayers (daniel@securicor.co.nz) wrote:
: : Yes, the medium wave band ones in Christchurch have been from 10 to 60
: : kW. And the fence could have good dimensions to pick up the MW band.
:
: Mediumwave broadcast transmitters? Hardly.
:
: My information lists the following stations at the power indicated:
:
: 3XG 612 Radio Rhema, 2kw
: 3YA 675 National Radio Chch, 20kw
: 3YC 963 Concert Programme Chch, 10kw
: 3ZB 1098 Newstalk 3ZB, 10kw
: 3XA 1260 C93FM/Radio Avon, 2kw
: 3XP 1413 Radio Ferrymead, 100w

Yes, well I wanted to be on the high side from the sparking point of view. In those days there were probably 3YA, 3ZB and 3YC only, maybe a 3YD. I remember the 3YA transmitter being replaced by the old 2YA Wellington transmitter when its power was increased. That must have gone to 60 kW from 20. The 2YA station has been important for shipping. I thought it might have gone from 60 to 120. 120 kW is probably a bit high power for a broadcast station. I wonder how many of you across the world can get it on 567 kHz. From a Dick Smith catalogue I remember that the New Zealand broadcast powers are fairly high compared to Australian ones. In New Zealand most of the main cities are spread out in a straight line some 200 miles apart so they wouldn't interfere too much. But aren't they in Australia, too? I used to like hearing the Australian stations before the local ones were given a spread of 9 kHz and then overseas stations became blotted out more. Well that also happened as stations began to stay on all night. It used to be fun listening to KHBH Hawaii which was later blotted out by 3ZB. At that stage we did not have stations which did not play music like KHBH. What are the powers of the American medium wave stations?

At about 15 miles from the stations I remember tuning in my crystal set and getting something like 30 to 100 microamps and millivolts when on a station?

: : FM broadcast transmitters have higher power:
:
: 3CCP 89.7 Concert Programme Chch, 40kw
: 3ZZM 91.3 ZM FM Christchurch, 40kw
: 3FMX 92.9 C93FM, 40kw
: 3CCT 96.9 Plains, 3.5kw
: 3RDU 98.3 98RDU, 500w

: : The chch.chat group say that the frequency is ~836 mega Hertz.
:
: The AMPS cellular band occupies 825-845 MHz (mobile transmit) and
: 870-890 MHz (base transmit). The GSM cellular band uses 890-915 MHz
: (mobile transmit) and 935-960 MHz (base transmit).
:
: Hence the ommissions from cellular phones will be in the range 825-845 MHz
: (AMPS - ie. Telecom Mobile) and 890-915 MHz (GSM - ie. BellSouth).
:
To do the calculation for the wavelength divide the speed of light (297,900,000 metres per sec) by the frequency. I can never remember whether a half wave dipole needs to be slightly longer or shorter than a half wavelength for resonance.

The configuration I gave for testing for sparks can be used for the higher frequency medium wave transmitters without them having to be too tall. The earth acts as the flat plane which is a mirror to the wave so that only 1/4 wavelength aerial is needed. Did anyone get sparks?

Our FM powers seem quite high. The wavelengths must also be similar to the dimensions of the human body. I have never felt so easy listening to the Concert Program on the FM band in the way I did on braodcast band 3YC which no longer carries it. I don't know if it is the 19 kHz stereo pilot tone or even some resonance from the local oscillator in the radio affecting me. But now I've been using the Internet quite a bit and being near an electrically noisy computer I don't seem to mind it. But is my brain gettin tireder or am I just getting older. One day I must take a few weeks/months away from the computer to see. Do you know of computers with low RF interference generation?

Tempest is the code name for a standard to *prevent* radiation
from computers which might be picked up and decoded at a distance.
Basically it is a military shielding and suppression standard.

>Just curious. My old computer seems to broadcast somewhere
>somewhere about channel 3 or 4 on a nearby black and white
>tv.
>Is that frequency typical of desk computers? if so what
>is the frequency?
>Can another tv left on on a certain channel or similar
>appliance help to block computer screen from being
>detected?
>k olson

There are basically two sources of RFI from a computer which
can be detected at a distance. One is the internal operations
of the computer, IE the flow of 1s and 0s through the system.
This can range as high as 200 MHz with modern machines, but
most of the interference will cluster around 8 MHz and harmonics
of 8 MHz. The other is emissions from the display device, usually
a CRT based monitor. Most of these emissions are simply harmonics
of the sweep frequencies, but the video signal can also radiate.

A poorly shielded computer or monitor can radiate signals which
are quite easily picked up hundreds of yards away. Signals radiated
from a computer with Tempest grade shielding generally can't be
picked up outside the room in which it is operated.

While you might not need to improve the shielding of your computer
to Tempest levels to make its radiations less of a nuisance, you
will need to add good shielding to achieve a quieting effect. In
most cases, the monitor is the primary culprit. That's because the
currents and voltages used are higher than in the computer itself,
and because the monitor is typically housed in a plastic cabinet
which offers no shielding properties. Use of wire mesh, copper foils,
or conductive sprays can improve the shielding of the monitor and
reduce the level of emissions escaping it. Use of ferrites on
connecting cables can help too.

The computer is usually in a metal case, so improving its shielding takes less effort. You need to make sure that case seams have a good bare metal to metal contact all along the seams. You can do this by sanding off the paint on the joining surfaces of the seams, and by adding additional screws along the seams (at least one every 5cm) to improve the bonding. This is standard VHF shielding practice, and works quite effectively to silence computers. Cables entering and leaving the computer need to be suppressed with ferrites.

In some cases, the keyboard or mouse may be a source of radiated signals. It is hard to shield these items, and often the best course is to swap them for different ones which radiate less signal. There is a wide variation in the level of radiation of keyboards and mice from brand to brand and model to model. Usually, you can find ones which are sufficiently quiet for your purposes.

It isn't really practical to try to *jam* the signals emitted by your computer. The jamming signals would have to be quite a bit stronger than the computer's signals to be effective, and those strong signals would themselves attract unwanted attention. If for some reason you need to operate a computer clandestinely, you want to generate the *least* amount of RFI possible, not the most.

A laptop with a passive LCD screen is often your best bet for low emissions, but make sure it is well shielded. Many laptops are plastic cased for weight reduction, and that can let them radiate like mad. Grid produced a series of metal cased laptops for the military which met Tempest specifications.

Note that grounding the computer can often make matters worse. The ground lead becomes a radiator as it conducts currents to Earth. If you suppress it with ferrites, it no longer acts as an RF "grounding" conductor, and hence does no good that way either. To stop the noise, you have to bottle it up inside the noise generating equipment and don't let it out. That takes shielding.

Fairhaven, MA Repeater (145.49 MHz) Weather Net Fall Meeting
Saturday, November 16, 1996

I'd like to invite all weather enthusiasts, amateur radio
ready or not, to come by our Fall Meeting this Saturday
from 12:30 to about 2:30 PM in Fairhaven at CVI (cable tv)
offices on Route 6, just a few miles off I-195 at exit 18.
(for detailed directions please see the web site below,
or email me) No admission charged.

We'll have little tidbits like Mount Washington Observatory
sample bulletins (Windswept) and MWO membership forms, and
METAR handouts. Our centerpiece display will be a demo of the
DTN wx data terminal system. (see web site)

We invite folks to bring along stuff they'd like to share with
other wx bugs like historic books and artifacts, homemade
weather instruments, antique or unusual weather instruments,
personal photos of weather in unusual settings. There is still
time to register with us if you'd like to have a little
time scheduled to present a short talk on any of the above
topics or one of similar interest. Please email me with a brief
description of your idea.

Our sponsor is a group of hams who first got together on the
Fairhaven MA repeater (145.49 MHz), and still do so on one
of the oldest continuously running 2 meter weather nets in
Massachusetts. The net meets without fail Monday through
Friday at 8:00 PM for the exchange of weather observations
and miscellaneous comments.

>and 4000.

Yes, whatever happened to plain old regular, non-scheduled, non-net QSOs.
There sure aren't many of these on 20M phone. And half the time when you
get one, someone breaks into your qso and informs you that it is a "Net
Frequency" and would you please give it up.

The average ham, particularly newcomers, are certainly not made to feel
welcome on 20M phone...

>based on the pioneering theoretical work of James Clerk Maxwell who was
>the one who realised that radio waves should exist based on work by Biot,
>Savart, Ampere, and Faraday.

It goes back further than that. Nathan B. Stubblefield was transmitting
wireless voice in the 1870s, and did a demonstration before Congress
in 1879 from the shore of the Potomac to a ship. Of course his theory
was all wrong, but his equipment worked. Others were using wireless
for communications before Marconi as well, including Tesla, who did
a public radio controlled boat demonstration in New York City in 1890.

Marconi's major contribution was the *commercialization* of wireless.
His stunt of receiving a Morse character across the Atlantic allowed
him to draw in investors willing to buck the submarine cable monopoly,
and allowed large scale commercialization of wireless. Marconi equipment
was rarely near the state of the art, but it was always well financed
and widely deployed.

Almost all of the Marconi company patents were contested and ultimately
defeated by prior art claims of other inventors, including a very major
patent fight with Tesla which wasn't settled until WWII (it was a key
patent on resonance in electrical circuits). But Marconi had money and
lawyers on his side, and that allowed the Marconi companies to have a
virtual deathgrip on early radio. Thus Marconi tends to get far more
credit than he deserves for the invention of radio, but deserves any
and all credit (or blame) he gets for shaping the commercialization of
early radio.

>famous (Tesla and Marconi were friends).

Tesla and Marconi were bitter enemies (at least in Tesla's mind), and
fought that patent battle until Tesla finally won (in the 1940s shortly
before his death).

>Of course, electromagnetic waves were known for quite a few years before
>Tesla's 1890-era patents -- but weren't much more than a curiosity until
>Tesla experimented and codified the material. Tesla even demonstrated a
>radio-controlled model submarine using coded pulses in 1895. There were
>a whole bunch of 'firsts' in that demo.

That model (and it was a big sucker, not a little toy) symbolized something
important to Tesla, and he tried to hang onto it during his darkest days. It
figured prominently in the bankruptcy proceeding on his Long Island power
tower (he kept it on display in the laboratory there).

Tesla returned from his abortive Colorado broadcast power experiments
a very changed man. He was still brilliant, but his personality was changed
almost completely. To give you an idea of the direction of the change, he
was the prototype for Boris Karloff's character in _The Death Ray_, and
was featured in a comic book series of the era called _The Mad Scientist_.

Speculation:

I think he was living proof of the effects of certain frequencies
on the mind. His penultimate Colorado experiments were at a pulse
rate of 7.68 Hz, which is the resonant frequency of the Earth, and
a key brainwave frequency. Tesla knew about the former, and I think
he found out about the latter in an unexpected way.

Sorry to hear about your loss. Were you covered by the ARRL's marvelous Ham Equipment Insurance Policy - or maybe your homeowners's insurance - for the loss?

What did local law enforcement say when you told them your HT had your callsign engraved on it? Were they receptive? Did they know what you were talking about? Did they siggest that you use your CA driver's license number instead?

Contact all local pawn shops...with a picture/flyer. And listen to whatever prioroty channel was programmed into the HT - see if the moron tries to transmit while the battery is still up.

Best of luck. The FT-530 is not available any longer - and was a great unit.

Hi Bob -- a lot of your questions can be answered by the Ham Radio FAQ
at URL:
http://www.mv.com/ipusers/wd1v/hamradio.faq.html#C2

And be sure to visit the ARRL page at:
http://www.arrl.org/

It has a package u can send for and all about exams and where they are
given.

Also Radio Shack has some publications on "Becoming a Ham"

Licenses are no cost, yes u can talk around the world, no u don't need a
tower and a beam. The new verticles are 25 feet high and can be ground
mounted. About the CB -- hams as well as CBers do invaluable service for
emergencies and disasters so the future is bright. Pres Clinton and
Congress recently gave Ham Radio commendations. Older ham gear can be
had for $125 and up. Look for Swan, Hallicrafters, etc. A friend works
mobile and has talked all around the USA as well as japan, So. America

and the Pacific. The Ham Ranks are indeed growing world wide.

Take a look at my DX Reference page listed below for all about long
range radio (DX).
Good Luck
Rod

In the most recent issue of "World Radio," I saw a preliminary review of the Alinco DJ-S41T mini-handie-talkie. Anybody know much about it? It is a 340mw 440 miniature HT. I checked it out on Alinco's webpage, but does anyone have one? Are they available yet?!

The list price is supposed to be under $150! Wow! And I saw it listed on Ross Distrubuting (Idaho) for $135. I think I need one!

Anybody have any experience with it yet?!

Darvell (KE7GW)

843. Law related Amateur Radio mailing list (Ham-Law)

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-13 00:00:00 UTC
From: Jim Altman <jaltman@altlaw.com>
Message-ID: <01bbd1ac$5c355600$42c41cce@jaltman.altlaw.com>
Source record: 212949

There has been a crash at the ham-law mailing list and about half the subscriber list was destroyed. If you were a subscriber you may want to check the list by sending mail to listserver@altlaw.com and put on a new line in the text (not subject) "subs" (without the quotes). This will cause a list of subscriptions on the server to be returned to you.

If you are interested in discussion of legal matters relating to amateur radio you are welcome to join the list by sending mail to listserver@altlaw.com with "subscribe ham-law" in the text of the message (without the quotes, of course).

Sorry for the problem.

844. Tucker calls

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-13 00:00:00 UTC
From: oo7@astro.as.utexas.edu
Message-ID: <56dgic$qlp@geraldo.cc.utexas.edu>
Source record: 212950

faunt@netcom22.netcom.com says:

>>Even more interesting: How did the Tuckers get the KT and ET calls?
>>I though the AA6xx calls came after the previous vanity callsign
>>timeperiod, but I could be wrong.
>>73, doug

Interesting. AA6KT was issued on 28 Apr 87, while most of the
AA6KK-KZ calls were issued on Sept 6, 20, 27 or Oct 4 of the
following year 1988 (some show later dates, presumably because
of address changes and resultant updates).

Likewise, AA6TK was issued on 28 Apr 87, while neighboring calls
were issued in Jan 90.

Was it possible to reserve calls at one time? I believe this
happened in the UK, where you could choose your callsign if it
had not yet been issued, and you couldn't start using it until
the call would have been issued in the normal sequence.

Is it possible that 'vanity" calls in the AA6+2 series were
allocated back when there were vanity calls? (and all the
Tuckers moved and updated their licenses in Sep 87).

HURRICANE FREQUENCIES
(Unless otherwise noted, times are UTC, freq in kHz)
Revised November 1, 1996

The following high-frequency hurricane season intercepts have been gleaned from numerous sources. Times and frequencies are subject to frequent change, and are listed for reference only. This list has been published monthly during hurricane season since 1991.

This is the final update of the 1996 hurricane season. Next season, there will be a web site in place permitting instant access to the latest hurricane frequency information and links to related sites. Watch for posted notices. Amateur packet radio distribution will continue.

If you copy this list, credit the authors. Do not remove update request and e-mail addresses. This is the only way we can keep the list updated! Thank you all who have so generously contributed information. Enjoy!

Hurricane reconnaissance aircraft (hurricane hunters) now operate primarily

on US Global High Frequency System (GHFS) frequencies. Best frequencies to

monitor are those guarded by MacDill and Ascension. After initial contact on one of the published GHFS frequencies, listen closely for them to switch

to a non-published frequency to pass traffic. Aircraft call signs begin with GULL, TEAL and NOAA.

Whenever a hurricane is within 300 miles of land in the northern western hemisphere, the Hurricane Watch Net is operational on 14325. The Hurricane

Watch Net provides communication between the National Hurricane Center and the affected areas.

During a communications emergency, W1AW transmits special bulletins by voice at hh:00, teleprinter at hh:15, and CW at hh:30. Frequencies are:
Voice 01855 03990 07290 14290 18160 21390 28590
Teleprinter 03625 07095 14095 18102.5 21095 28095
CW 01818 03581.5 07047.5 14047.5 18097.5 21067.5 28067.5

The National Institute of Standards and Technology broadcasts storm warnings on 2.5, 5, 10, 15 & 20 MHz AM according to the following schedule:
WWV hh:08 Covers Atlantic and eastern North Pacific
WWVH hh:48 Covers Western, Eastern, Southern, and North Pacific

To all radio amateurs

SB QST ARL ARLB079
ARLB079 Vanity call update

The FCC calls them WIPS--''works in process''--applications that need some kind of special handling. But for up to 12 per cent of first-day Gate 2 vanity call sign applicants, WIPS means ''no new call sign.'' It now appears that as many as 550 first-day applications ended up in the WIPS pile for a variety of ''inconsistencies''--some as simple as an address on an application that failed to match one already in the FCC's database. The FCC said this week that it hopes to clear its decks of all first-day vanity WIPS by November 15. An FCC spokeswoman in Gettysburg says that being in the WIPS stack does not necessarily mean you ''missed out'' on getting one of your call sign choices. Depending on the WIPS category (the FCC's not telling what those are), a new call sign already may have been attached to many of the applications that are being held up. New Gate 2 grants since November 4 have brought the grand total of successful applicants to 3805.

It's now estimated that some 200 first-day Gate 2 applications were dismissed by the FCC, most because all of the applicants' call sign choices already had been granted to other hams. Still, many 1x2 call signs remain. As of this week, more than 6000 1x2 calls in all US districts remained available--substantially more than the number of vanity call signs the FCC has issued under Gate 2 to date.

Still not known is just when Gettysburg will process Gate 2 applications that were received after September 23, the opening day for Gate 2. An FCC spokeswoman said this week she had ''no idea'' when that would happen. Applications from approximately 1400 hams arrived at the FCC in the days following the opening of Gate 2.

Although the FCC did not release the initial day-one grants until Tuesday, November 5, the applications actually were processed--and the licenses dated--on November 4. The FCC spokeswoman said that

computer problems on the morning of November 5 prevented the release
of the database file until late that afternoon.

I just filed an electronic 610v. It's quite easy. Fill out the form as presented on the web page. Hit the submit button. The form is reviewed to insure all the required fields are filled in. A second form (I forget the form number) will be displayed on your screen. This form is a payment voucher. Most of the info will already be filled in for you. Print the form and mail it to the FCC with a check for $30.00. That's it. The mailing address is in Pittsburg, PA. not the usual FCC address.

I have no idea when gate 3 will open. I do know that only the first day's applications on gate 2 have been processed. There is some type of hold up and I'm in the waiting queue.

Good luck and 73,
David - AB2CI

The Triangle East Amateur Radio Association (TEARA) holds monthly amateur radio exams In Smithfield NC. The tests are held upstairs in the Smithfield Public Library at the corner of Market St. and 3rd St. The tests are on the 3rd Saturday of each month. There is no pre-registration requirement, and test registration begins at 9:30 A.M. sharp. 610 forms are supplied, and the test fee for 1996 is $6.05. The applicant must bring photo ID, any licenses/CSCE's that they have, as well as photocopies of same.

Talk-in is on the following repeaters (they are linked full time): 147.39+ PL 88.5 in Clayton, 442.400+ in Wendell, and 147.30+ PL 88.5 in Wilson. Further information can usually be obtained on the above repeaters, at wb4iuy@ipass.net, or drop a note here.

The schedule for 1996 is as follows: Nov. 16, and Dec. 21.

This radio is in better-than new condition: It has the all freq (1.8-30 MHz) transmit mod and puts out a solid 130-140 W. Mint condition. The perfect HF rig for mobile or portable use, and also works great in the shack! $700 including shipping. Cmplete with mic, manual, pwr cord, mounting bracket, and box.

I don't know about your experiences, but all of my experiences with the Yost battery folks have been positive. I can remember Donna taking down my phone number some six or seven years ago at the TRW swapmeet and calling me a week later to let me know that she located a replacement for the discontinued battery I asked about. Until she moved back home to help the business in person, I had nothing but good experiences buying batteries from her. And since then, my contacts by phone with the Yost company have been pleasant and productive 100% of the time.

Just my opinion.

Sorry, I can't tell you when hams lost 11 meters, but I was operating NBFM on 11 in 1948-49 when the band was relatively busy, as was 10 meters. My understanding is that the FCC pulled 11 meters because it was virtually unused by the hams when they (the FCC) were looking for a place to open the "new" Citizens Band, moving it down from 400+ MHz.

860. Mobile antenna mounting advice

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-14 00:00:00 UTC
From: Rick Kruse <rlk@utulsa.edu>
Message-ID: <56dtas$gp1@utulsa.utulsa.edu>
Source record: 212819
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.misc

Greetings!

I need a bit of advice regarding the mounting of an antenna on my truck.

I've been lusting after the Standard C5900DA and will have one in
my posession shortly. As far as I know, there are two mobile, tri-band
antennas available for the 6m/2m/70cm bands this radio supports -
one from Diamond, and one from Comet. Both are on the order of five
feet tall.

I intend to mount the radio and antenna in/on my 1994 GMC full-sized
pickup. Because of how high in the air the truck sits, I can't mount the
antenna on the roof of the cab without running into all kinds of clearance
problems. I have been advised to consider using a trunk-mount device on
the hood of the truck, but I'm afraid that would be "cosmetically
challenged". The truck has a bed liner in it, so drilling holes and
mounting
some kind of bracket in the bed would be difficult, but not impossible,
although I'm concerned about performance of the antenna. A rear bumper
mount would interfere with tailgate operation, and the rear bumper
has a rubber cosmetic covering on part of it, so I don't know if that
will be an option.

So, at this point, before I purchase a mount, I'd love to hear from anyone
who has any other ideas on this. Any advice/suggestions/ideas would be
very welcome indeed!

Please send me a copy of any posts in email, because my access to usenet
tends to be infrequent at times.

Thanks in advance!

The radio is indeed available. My brother-in-law purchased one from RT Systems (Hunsville, AL) at the Stone Mountain, GA Hamfest and he likes it. It is not as small as the Standard C508A, but there are two things I really liked about it. First, the antenna arrangement is nice. It just folds over out of the way and flush with the radio body. It stays connected, so I suppose you could wait for a call with the radio in your shirt pocket and then fold it out when you are ready to transmit. (Have not tried that, though.) That takes care of a concern I always have: It is inconvenient to carry a radio with the antenna attached, but repeatedly removing and putting it back on wears out the BNC (or whatever). The second thing was the price. Performance? He passes through my area frequently on business, and I am surprised that he has the range to hit the local repeaters pretty well. It does better than I would expect for the power level. Things I don't like are : no DTMF. Just like the C508A. Sure wish they would put a DTMF memory of some sort, even if they couldn't put the keypad. Also, it could be a little smaller. OK, so that last one was pretty picky. Now how about a dual band version? Price it less than $175. Put me down for one - I can't resist cute new toys like that.

regards, Don (KE4KYO)

>makes you think that all of these "clubs" and call signs are LEGAL??????
>
>Bob

To begin with, I think that someone submitting three dozen
applications for club calls is just plain silly, but it is,
as far as I can tell, legal.

Next, I think someone submitting three dozen applications for
vanity calls (or more?) and $1000 in renewal fees every ten years
is also just plain silly, but, again, as far as I can tell, it is
legal.

How can I tell it is legal? Easy - rather than trying to hold
other radio amateurs accountable to how I think the rules *should*
be, I actually look at Part 97 and try to understand what the
rules really are.

A look at Part 97 suggests that only one primary/operator license
may be issued to an individual at a time, but it appears that a club
may have several club station licenses issued concurrently.

If you don't believe me, you can call up the truly professional
FCC consumer service reps and have them tell you.

Now, on a side note, I'm just flabbergasted that someone tried to call
up Jim Roach and extract an explanation. I wonder how that someone
would feel if I called up and demanded an explanation for how they
passed their license exams? This is the kind of attitude that
has completely destroyed the value of the Amateur Auxiliary and
made it an embarrassment. If I had a quarter for every time
I've heard amateurs incorrectly lecture others on Part 97, I
could afford to apply for a club + vanity call.

>Carl,
> I hate to point out that people, not to mention most radio equipment under
>$100,000, can not receive your digital modes.

David,

Your first sentence above is only partially correct (in that people cannot copy the advanced digital modes in their heads) ... the second part, assserting that gear to copy those modes would cost $100k is patently ridiculous ... PACTOR and CLOVER adaptors are readily available and their cost would plummet with truly high volume production (and perhaps some ASIC-ization and redesign for cost reduction). The company that I work for produces CONSUMER PRODUCTS with a retail price of $299 that employ sophisticated direct sequence spread spectrum techniques at 900 MHz (TWO complete transceivers for that price ...)

Digital stuff is getting damned cheap and will get even cheaper as advances in VLSI and DSP continue ...

>Your digital modes are not as reliable as a switch and a coil of wire.

A CW transceiver is more than a switch and a coil of wire ... and modern VLSI devices are highly reliable ... demonstrated MTPFs of tens or even hundreds of thousands of hours are commonplace, even for equipment much more complex than the typical piece of ham gear would be ... so the reliability "issue" is really a NON-issue ...

>You can not build your digital transceiver out of affordable
>off-the-shelf components.

Both manufactured rigs and kits will be well within the reach of any average ham ... they will likely cost LESS than some of the 3 and 4 conversion "superhet" monstrosities that Japanese are foisting on hams today ... (and the DSP will do more than serve as a fancy audio filter)

>Normal people can not afford to buy a digital transceiver capable of
>your modes.

Ridiculous ... as I said, when they become commercially available, there is NO reason that these rigs will not be cost-competitive, or even cheaper than, current rice-box rigs ...

>You must be
>living in some alternate universe if you think they can afford them.

No, I make my living designing gear of similar levels of complexity, using similar components and technologies, that are used in mass-market comsumer applications which are VERY price sensitive ... I am being TOTALLY realistic in stating that price parity (or better) with current products is readily achievable ...

>You
>certainly must be intelligent enough to understand the concept that I
>pointed out.

I understand what you're saying ... I'm just saying that you are TOTALLY WRONG ... I believe that you think things are as you say, but they are NOT ... your assertions simply do not match with the commercial/technical realities that I deal with every day as an engineering manager for a 2 BILLION dollar electronics company ...

>CW can be understood by
>People, Humans, you know those tall, two-legged things walking around
>outside. You need a little box to receive those other digital modes.

Understood ... you need a car to drive on the freeway, too ... so what?

>If
>you do not have that little box those digital modes are just noise to
>people.

That's why people like me want to design those little boxes for people like you ...

>By the way. I never said that CW is better than your digital modes. If
>you reread my earlier posting you will note that I point out CW is a very
>poor mode for normal communication. You are right when saying that you
>should use the modes which will get you through the best.

I'm glad you acknowledge this ...

>CW is the best in some situations.

VERY FEW ... and remember, I NEVER said "ban CW" ... just get rid of the outdated test and open things up to the technoids who couldn't be bothered with the code, so they can do modern things for everyone's benefit ...

>Without the code requirement it will be very likely
>that no one that will be able to receive morse code, rendering CW useless.
>This would create the possibility of some areas where communication is
>impossible. Areas where there are no high-tech digital transceivers.

What areas are those? And, please don't give me that stuff about the poor guy in his shack in the thirld world ... I've spent a LOT of time in the third world and the hams there use Kenwoods and Icoms and Yaesus, just like most of the hams here ... the hams HAVE money to spend on their gear, or they are too busy eeking out a bare living to be hams. That's the reality of it ... lots of hams, all pretty affluent, even by American standards ...

This amp, never used, still in kit form, covers 160-10 meters at 1000 W out with 100 W in using a single 3-500Z tube. It is the same as the Ameritron AL-80A amp. Price reduced to $600 plus shipping, or pick up near Dayton, Ohio. I don't think you'll find an amp with zero use at this price anywhere else!

I'm looking for info on mobile or handheld scanner or receivers
that pick up 215, 216, 217, 218, 219, & 220. mhz without spending an arm & a leg.
(or tranceiver) We have tracking collars for our dogs that transmit in
those ranges. I have been told that frequencies can be altered, but
haven't been given any specific info. Thanx.

You are using "will be", "when they", "would become", "are getting", many other words stating that these things are not currently viable alternatives. You understand the concept of why morse code can not be discarded. You are too blinded by the future to see the present. Your digital alternatives are not yet viable. I can not pick up a magazine at the news stand and find an advertisement for a 20, 40, 80 meter spread spectrum transceiver. 10 years from now it may be an option, but, right now it is ridiculous to say that you can simply toss CW out the window because technology exists that 'MAY' or 'WILL' replace it. We can rid ourselves of CW when something HAS replaced it. I can not find a single spread spectrum signal on my HF receiver. I do not find them when tuning through the amateur radio HF bands. I have access to equipment that can receive many of your digital modes. I am familiar with your digital equipment. I can not see them as a replacement for something as simple and widely accessible as CW, yet (someday, in the not so distant future, - more than likely). I suggest that you spend more of your time getting familiar with the present rather than ranting about what will become of the future.

Did you really men SCRRBA? Sounds like SCARA? SCARA pop up in a pair
being used by an open repeater. I've heard they charge lot to their members
for using this repeater.

I've got mixed emotions about it. What Jim Roach did was an obvious abuse of club calls. That's pretty obvious. Yes, it was legal, but was certainly perceived as unethical and *not done in the spirit of amateur radio* by nearly everyone I've talked to or read notes from.

As ham radio has traditionally been a self-policing group, I don't see any harm in Mr. Roach knowing that a gang of hams are a bit peeved at what he did. A phone call demanding an explanation might not have been the best way to go about it, but it just seems acceptable to me that he be made aware of what many in the ham community are thinking. Maybe writing a letter would have been a more gentlemanly approach.

In any event, what's done is done, and I would venture a guess that Mr. Roach will probably receive enough flak from hams in his local community to make him regret his "legal" behavior.

> >>Then you're not *really* a ham ... you're a CBer who knows the code ...

Don't put down CB'ers! In my area there are CB'ers who have radio and electronic knowledge that will put a lot of hams to shame! Just because somebody has a ham license does not mean that they know more than somebody who does not. There are a lot of hams who are appliance operators and do not care how or why a radio works. They just want to use them and they don't give a hoot about homebrewing.

Give a listen to some hams on HF brag about their 10,000 dollar stations with built-in automatic antenna tuner, 1500 watt linear amplifier and computer controlled tranceiver. Many of them have been hams for 50 years and could not tell you the first thing about how their radios work. When their radios break, they send them back to Icom, Yaesu or Kenwood.

By the way, there are a lot of CB'ers who also happen to be hams. In the future please do not use "CB'er" as a derogatory statement!

Steve, WA3RVT

From: Chuck Hallett - W7LDS <liahona@execpc.com>
Message-ID: <328B445D.1F34@execpc.com>
Source record: 212834

There has been some discussion on rec.radio.amateur.boatanchors in reply to a thread on DX-100s and their 11 meter capability; along with a lot of other transmitters of that era.

I expressed the opinion that 11 meters was *not* an amateur band in '66 when I received my general class license, and probably not in '65 when I was a novice. Others have said it wasn't till '68 that the change occured.

Can anyone who was licensed when this happen give us a concise treatise on when and why 11 meters went away? It might be enlightening given the current turmoil over bands at risk.

Chuck W7LDS

--
Two centuries ago, the celebrated historian Edward Gibbon wrote an epitaph for ancient Athens, one that might also apply to contemporary America:

"In the end, more than they wanted freedom, they wanted security. They wanted a comfortable life; and, in their quest for it all, security, comfort, freedom, they lost it all. When what the Athenians wanted finally was not to give to society but for society to give to them; when the freedom they wished for most was the freedom from responsibility, then Athenians ceased to be free."

>resist cute new toys like that.

I've solved the DTMF problem. Electronic Rainbow had the AT&T 123A
electronic dialer on sale at the show. This is a tiny acoustically
coupled DTMF memory dialer. I wasn't sure it would work, but I tried
it with my C508A and it works like a charm. It only has 9 memories,
but that's enough for me, and it can be used manually too, of course.
I've added it, and a rubber band, to my low power HT pack (a soft
cellphone holster). Also in my pack ride a spare pair of alkaline
AA cells, and strapped to it the Comet SMA-3 antenna (a *real* range
booster for the little C508A).

The little C508A looks more than a bit ridiculous with the tall
Comet antenna and the TT pad fastened to it with a rubber band,
but it allows me to use the radio on occasion as more than a remote
mic for my mobile rig (that's how I normally use the radio, the
vehicle's dualbander acts as a crossband link to get me into
distant repeaters as long as I'm fairly nearby with the HT and
its stock stubby dummy load).

:>
:>
:>Thanks!

This is where you may want to consider replacing those mercury vapor with
solid
state rectifier units. They are made to plug right into the sockets and go
for 15- the pair at 'fests. Much less trouble which is why the MARS guys put
them in the BC610's they used (mostly for rtty) and why they came stock in all
the T-368 transmitters (the military replacement to the BC-610).

Much cheaper to ship these diodes too! Just be sure to remove that bad fil
transformer first, and support the hv leads with a good ceramic pillar if
necessary!

885. Re: No 60Hz EM Hazard Proven

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-14 00:00:00 UTC
From: Jake Brodsky <frussle@erols.com>
Message-ID: <328B8779.66AF@erols.com>
Source record: 212844

Gary, I can't disagree with what you say concerning 60 Hz fields. I should point out, however, that proving something is safe under such criteria is impossible. Everthing has an associated hazard. Nothing is "perfectly safe." The question which ought to be asked is: How should we rate 60 Hz fields in context with other known hazards we can do something about?

Proving something is dangerous is easy. Subject a test subject to enough of the stuff, and you're bound to get some kind of reaction. That's how Sacchrine (sp?) got the "dangerous" label, even though the exposure required to equal that of the lab rat test was pretty high.

Frankly, I think folks are looking for a boogy-man in these studies. In a recent paper for the American Physical Society, David Hafemeister pointed out that the earth's magnetic field exposes people to some pretty high EM fields when they move through it. Running can produce an E field of 400 uV/m which corresponds to a field of 200 mG. A tilt of the head of 45 degrees in 1.6 seconds will create a field of 4 uV/m or 2 mG @ 60 Hz. A fast nod in .16 seconds gets you 40 mV/m and 40 mG respectively. Ice skaters who twirl around would be doomed if there were any hazard associated with EM radiation.

These calculations are straight from Maxwell's laws --nothing fancy. The fact is that nobody has been able to show any ill effects at a cellular level which were attributable to anything other than RF heating effects. That is how the ANSI standard (but not NCRP) went about determining what was dangerous.

The fact remains that if there is any hazard associated with 60 Hz fields, aside of heating effects, it hasn't been identified. Epidemiological studies are difficult to control, as you pointed out, because the fields are so pervasive. What you might not realize is that power line fields also tend to attract radon (this came from the same paper cited earlier). Nobody has identified the mechanism by which the few weak positive correlation studies have occurred. The small additional risk is just as likely to be a secondary or even a tertiary side effect of the exposure.

You can say we don't know that 60 Hz EM fields are safe. I'm saying no-one has proved they're dangerous, either. If you had to take action on something now, how would you rate this risk? Personally, I rate it down near the noise level. You're entitled to your own paranoia, of course. Being paranoid doesn't mean you're wrong, but if you want to get paranoid over stuff of this caliber, I can't imagine how you cross the street in traffic...

Do As I Say, Not As I Do
a short, sad story told by object lesson
to a world full of people who hate his guts

Here's what I say:

"All hams are boring. All they ever talk about is the weather"

Here's what I do:

A search of recent usenet postings for the words "k1oik" and "weather"
turned up 147 matches in three months worth of traffic.

Here's what I say:

"Hams spend too much time with their electronics and not enough time
with their wives"

Here's what I do:

An account summary of BF's online time at ccsnet shows that he spends
an average of 7.3 hours per day online (speaking of that, his password
is trivially easy to guess, since he mentioned his wife's name in his
postings).

The closest he ever got to a woman was an ASCII figure of a woman that he
stole from a posting (and of course, didn't give proper credit).

Here's what I say:

"Hams spend so much time talking about themselves..."

Here's what I do:

In posting <3273AE5B.514D@ccsnet.com>, BF says "Here is what other
hams say about me:..." This message, in fact, was written by BF while
he was logged in on Sunday afternoon, Oct. 27th and is a totally
self-serving piece of crap. I found the original file, with editions, in
his user space on ccsnet.

Here's what I say:

"Anyone who only uses one-word insults can't be very smart."

Here's what I do:

In message <325B061A.1EF4@ccsnet.com>, while attributing a quote in r.r.a.m, BF says: "Gary (smartass)Newberry wrote:[...]"

Here's what I say:

"When you tell me to 'get a life' it means that you wish you had my life since you don't have one."

Here's what I do:

In posting <3285E819.5A4A@ccsnet.com>, BF says "Get a life." That, by the way, was the sum total of the post, excluding the attribute above it and his lame, tired .sig below it.

Here's what I say:

"I've been married for eighteen years"

Here's what I do:

It turns out that BF has been married 18 years, but not in a row. He's on his second wife now, and his first marriage ended in divorce because of his homosexual fling with a student in 1987. Ref: Boston Globe, 10/5/87, p. B5, "Cape Cod teacher suspected of sodomy". In article <327BE461.2608@ccsnet.com>, BF writes: "When you need the friend the most, he is gone. Another will come, not the same, not better, not worse but different". This is the exact quote to the student in question in his school yearbook. Disclaimer: BF was not convicted of sodomizing a student in 1987. Interesting that "BF" is the same initials for a slang term for sodomy.

Here's what I say:

"You think violence solves everything"

Here's what I do:

In posting <325052A7.2ED1@ccsnet.com>, BF says: "Hey tough guy I wonder how tough you would be if I knocked at your front door?"

Here's what I say:

"Most hams don't know the saturation voltage of a transistor"

Here's what I do:

When finally cornered on the subject, BF admitted that he was wrong in the answer. This, coming from a "Teacher of video, broadcasting and

electronics". This is roughly equivalent to an auto mechanic not knowing how to inflate a tire. Hence the expression "Those who can, do; those who can't, teach"

Here's what I say:

"Into child like name calling?"

Here's what I do:

The following terms were taken from several postings all made in the last thirty days, terms that BF used to address the person he was talking to: "dumbass" "pimple faced geek" "fat" "wimps" "pussies" "PIGS!" "brain dead trauma victim" "BUTT head" "you cannot prove me a pervert" "I write garbage" "Boy am I dumb" "not all YOU can eat" "Twinkie?" "<----- Hams this is a female" "All hams are clones" "WHAT IS CW?" "you have no balls"

This posting brought to you as a public service.

888. FS: KMA LOG PERIODIC ANTENNA'S 50-1300 MHZ.

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-14 00:00:00 UTC
From: dwhowell@iamerica.net

Source record: 212847
Cross-posted to: rec.radio.amateur.antenna,rec.radio.swap,rec.radio.amateur.misc

For Sale,

NOW YOU CAN HAVE AN AFFORDABLE ANTENNA FOR VHF/UHF THAT COVERS ALL OF THE FREQUENCIES BETWEEN 50 MHZ AND 1300 MHZ.

The KMA 4113 is a Log Periodic Antenna that covers all the VHF and UHF frequencies listed above. The antenna is made of high quality aircraft aluminum and stainless steel. The antenna has 30 elements and gives you 10 dbd of gain on the amateur bands. Also, the front/back ratio is 30db.

These are new commercially made antenna's with the Amateur in mind. The antenna performs very well and can be mounted on a pushup pole or tower.

If you are in the market for a ALL BAND antenna, drop me a email. For this week only the price is $167 + shipping. The Tennadyne T-31 costs $240 and the Create costs $309. The KMA 4113 is a higher quality antenna at a price with the Ham in mind. Email me for additional information.

dwhowell@iamerica.net

This, and 14.313MHz, sounds like a real good reason for me to buckle down and get my code speed to 13 for voice HF priv's. Currently a tech plus, took the general theory test and novice code elements back in the summer of 1976 at the FCC office in NYC. I understand all I need for General is 13 wpm.

:-)

I mostly do packet anymore, anyway.

892. Re: When did Amateurs lose 11 meters (C.B.) and why?

I think it was in the late 50's when the CB band was established, and that 11 meters was used for it. In all probibility, 11 was lightly populated anyway. And you needed actual callsigns, no QSOs with parties outside your family/business (cept emergencies), and the FCC actually enforced rules then.

From: White001@mailhost.csusm.edu
Message-ID: <56dqgb$l1q5@atlas.csusm.edu>
Source record: 212853

No. I'm questioning the call signs which the FCC labels
"unassignable" even though they are well beyond the two year
grace period for a previous licensee, are correct for the region,
and otherwise have no restriction placed on them.

The FCC is investigating this matter for me and hopefully,
I will one of my preferred calls.

Fred, AH6US

I want to make some device able to folow radio signal in 1/4 mile

distance

if the signal is backward the receiver lit LED backward

if the signal is forward the receiver lit LED foward

if the signal is from left lit left LED

and the same for right.

some people know how to make that device.

or where can i find a documentation on this?

Somebody say is a doppler RDF receivers.

Tanks for rapid respond.

The 435 machine is one of the best free intertainment in the L.A. area. If you are ever in LA, bring your HT and listen. I doubt you'll be able to talk, because some of these guys run over 500 watts to that they can jam one other or overpower the jammers. Biggest bunch of losers I've ever seen!

_/ _/ _/ _/_/_/ _/ _/ _/ _/
-
Here is a summary of news items covered on edition #190 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 22-Nov:
-
1. The FCC Reports on the "Leftovers" from Gate 2, Day 1
2. Gettysburg Corrects Call Signs Assigned in Error
3. Wireless Communications Service Proposed by FCC at 2.3 GHz
4. Upset Results in Some ARRL Division Elections
5. Famous Amateur Posthumously Honored in NYC Induction Ceremony
6. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
7. Santa's Packet Relay Station Again Operational in Canada
8. Special Event Station Calendar
9. 10 Meter CW Beacon on the Air from Wyoming
10. Launch of Columbia on Mission STS-80 Delayed to Tuesday
11. OSCAR-13 Displays Good Attitude in the Face of Burnout
12. SSTV Activity on AO-10 Yields Transoceanic Results
13. KA0QNB Arrested in Boston for Murder of Family of W0CY
14. Weekly Propagation Forecast
15. "The RAIN Dial-up" from Chicago
-
Funding for the program's transmission and production expense was
provided this week by a grant from the AREC Repeater Group of West
Palm Beach, Florida, where "This Week in Amateur Radio" is heard on
the KF4ATQ repeater, on 146.67 MHz, serving West Palm Beach,
Ft. Lauderdale, Lake Worth, Lighthouse Point, and Delray Beach.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard on the "W0KIE Satellite Network" each Saturday at 9:00 PM
(EST) on the Hughes Communications SBS-6 commercial communications
satellite, transponder 13B upper, located at 74 degrees west
longitude in equatorial geosynchronous orbit. The transponder
center frequency is 12.019 GHz; tune up in frequency to 12.031 GHz.
Program audio is on the 6.2 MHz analog subcarrier and carried on
VHF/UHF repeaters throughout North America and on 160 meters at 1860
kHz. Contact your local amateur radio club or repeater operator if
"This Week in Amateur Radio" is not being heard in your area.
```

-
Production and transmission expenses are underwritten by donations
from repeater operators, amateur radio clubs, and individuals.
Further information is available from George Bowen, N2LQS, at
518/283-3665 (email kxkvi@delphi.com) or Stephan Anderman, WA3RKB,
at 518/664-6809 (email sanderman@delphi.com). You may also reach
them @ WA2UMX.FN32AW.ENY.NY.USA.NA via amateur packet.

Granted, the 12.5 KHz channel spacing will not work for every
situation, and that disputes will arise from its use. The fact
of life on 440 in So California is that we will have to start to
use the splinter channels or else disenfranchise some of the
quasi-commercial closed private repeaters now sitting on this
band like a pregnant elephant. As long as users see 440 as a
way to avoid paying for a cell phone instead of as an amateur
radio band, and the established coordinators and regulators all
bless the arrangement, the pressure will continue to build.

John, AC6VV

SB PROP @ ARL $ARLP047
ARLP047 Propagation de KT7H

ZCZC AP67
QST de W1AW
Propagation Forecast Bulletin 47 ARLP047
From Tad Cook, KT7H
Seattle, WA November 15, 1996
To all radio amateurs

SB PROP ARL ARLP047
ARLP047 Propagation de KT7H

There was a rise in solar activity over the past few days, with solar flux rising steadily above the three month average of 70. It is expected to top out in the mid seventies by Saturday, and then drop to 70 by the middle of next week, and 68 at the 1st of December. After that flux values are expected to rise above 70 again after December 7.

Geomagnetic disturbances are rising, and should peak today and again around the 19th.

Perhaps this period of days with solar flux above the recent averages is a sign that the cycle is about to turn up from the bottom. When we start seeing weeks of solar flux numbers above the previous 90 day average we will know that the wait is over.

A packet message came in this week from Dick Farman, K2QR, ARRL Technical Coordinator from Western New York. Dick wants to see some VHF content in this bulletin, and here are his comments:

Although present HF propagation is not particularly exciting - as evidenced by solar flux numbers around 70 - anything can happen on VHF. The astute VHF DXer usually ignores the reported solar flux and concentrates on the A and K indices.

Geomagnetic field disturbances may be sufficient to cause aurora, and the aurora can be reflective at VHF. As pointed out in an earlier propagation bulletin, the A and K indices provide an indication of geomagnetic activity and, therefore, can provide a band opening tip-off to VHF operators.

When the A index is about 20 and the K index is 4 or 5 (or greater.), conditions are often good for VHF aurora. Hollow sounding signals on 80 meters mean it's time to fire up on VHF and

point the antennas north.

Phase variations in signals reflected from the auroral curtain make this propagation mode suitable for CW and, perhaps, SSB contacts. FM becomes too distorted for communication. Contacts are most likely on 10, 6, and 2 meters. As the intensity of the geomagnetic storm increases, higher frequencies are effected.

As electrons trapped in Earth's magnetic field spin down and lose energy, they emit photons and the aurora becomes visible-sometimes as streaks of light, sometimes as ''curtains.'' It's often a tough decision whether to work the bands or go outside to watch the light show.

Sunspot Numbers for November 7 through 13 were 0, 0, 11, 11, 14, 27 and 14, with a mean of 11. 10.7 cm flux was 68.5, 69.1, 70.2, 71, 71.5, 72.2 and 73.1, with a mean of 70.8. Planetary A indices for the same period were 5, 4, 11, 6, 3, 8, and 11, with a mean of 6.9.

>spectrum transceiver. 10 years from now it may be an option, but, right
>now it is ridiculous to say that you can simply toss CW out the window
>because technology exists that 'MAY' or 'WILL' replace it.

NOBODY SAID "rid ourselves of CW" ... just eliminate the exclusive test for that mode to get more modern-thinking people into ham radio for the future's sake ...

>I suggest that you spend more of your time getting familiar
>with the present rather than ranting about what will become of the future.

I am quite familiar with the present ... I am an engineering manager for one of the most successful electronics companies in the world ... I deal with CURRENT leading edge technology on a day to day basis. Ham radio is pathetically backward and getting worse by the year because people like you are so resistant to new ideas and new methods ...

If we don't make dramatic changes THERE WILL BE NO FUTURE FOR HAM RADIO!

Them's the facts ...

That is quite true ... I did not mean the comment to be so much
derogatory to CBers as to the appliance operator hams who don't know
squat about radio and care less ...

>There are a lot of hams who are appliance
>operators and do not care how or why a radio works. They just want to use
>them and they don't give a hoot about homebrewing.

They are NOT really hams ... they are simply yackers ... they really
belong in some other personal communications service like CB, GMRS, etc.
which ARE for people who are not interesed in radio technology but
simply want to communicate via radio ...

>W6QS --- comments are my own!

Please note, NBFM is most certainly not 12.5 channels, but 25 KHz
channels. There are practically NO FM ham rigs designed to even come close to
rejecting an adjacent signal centered only 12.5 KHz away. Most commercial
equipment isn't spec'd for that either. And.... CTCSS may prevent you from
hearing that adjacent channel splatter when its on, but it won't prevent that
channel from interferring with the signal which you are trying to hear.

There is a clear difference between saying to someone "careful - you
breaking a specific rule <insert part 97 citation>" and saying "you did
something I don't think was nice". Roach didn't break a rule. In fact,
whether he's even abusing the rules is a clear matter of opinion. The
FCC has certainly allowed for multiple club calls.

>As ham radio has traditionally been a self-policing group, I don't see
>any harm in Mr. Roach knowing that a gang of hams are a bit peeved at

I have little idea how many people in the amateur community
disagree with Roach's actions, and I certainly wouldn't purport to
speak for them. Perhaps you missed my entire point, which is this:

** Every time radios amateurs take it upon themselves to police other
amateurs for things that aren't violations of the rules, they diminish
the value of the amateurs that do police others for bona fide rules
violations. **

=>back in the summer of 1976 at the FCC office in NYC. I understand
=>all I need for General is 13 wpm.
=>I mostly do packet anymore, anyway.

You took the old 50 question Technician and General element 3 written exam. On 3/21/87 the FCC split the test into a 25 question element 3A Technician and a 25 question element 3B General. You need an original license with an effective date before 3/21/87. When you upgrade bring an old (probably expired) original license and a copy as well as ALL the normal required paperwork to the VE test session. The old license will give you credit for having already passed element 3B {part 97.505 (8)}. Then you can get your general license by passing the 13 WPM element 1B code test. If you don't have any of your old original licenses contact your local VE team to find out if there is anything they can do about that. A Technician or Technician Plus license with a date of 3/21/87 or later will only give you credit for passing element 3A which is why you need the old license. Good luck on your upgrade.

The current question pool is supposed to be good through 1998. If they
are going to add new questions, they should wait until then.

I wouldn't care for myself (I'm an Extra), but I'm trying to get my dad
to upgrade to General, and every additional question is more discouraging
to him (he's 67, and although very smart, not terribly "academically
oriented").

If any more info is made available on this, please let me know.

I got my license in 1951. We had 11 meters at that time, shared with medical/scientific devices (diathermy stuff, etc - I remember hearing some of it buzzing away). Soon after I got on in early '52 I heard we were losing 11m, so I deliberately set up and operated some there, just for the hell of it. This had to have been late 1952 or early 1953. I assume we lost it about that time.

I think it was stated then that 11m would be used for a CB service, though the FCC envisioned a different CB service than CB turned out to be later. CB didn't catch on for a long time. There was an early CB service up around 460 MHz.

Incidentally, DX-100's were available in the early '50's.

If you are in need of a nicad battery, I would advise you not to consider E.H. Yost & Company as a supplier. I ordered a Nicad from them and they sent the wrong battery. I gave them the Varta number and the told me they had the exact battery. The battery they sent me, COD, was not the correct battery. I've called them and faxed them many times trying to get this straightened out. They will not even return my call! If anyone has an 800 number for them I would appreciate it as I have spent more money calling them than the battery is worth. My advice is buy from someone with some customer service.

Message-ID: <1996Nov15.052448.12640@ke4zv.atl.ga.us>
Source record: 212778

In article <328B8779.66AF@erols.com> frussle@erols.com writes:
>
>Gary, I can't disagree with what you say concerning 60 Hz fields. I
>should point out, however, that proving something is safe under such
>criteria is impossible. Everthing has an associated hazard. Nothing
>is "perfectly safe." The question which ought to be asked is: How
>should we rate 60 Hz fields in context with other known hazards we
>can do something about?

The problem with this sort of call for risk assessment is that we
don't know exactly what the risk is, so we can't do a sensible
assessment. I'd note that we *could* do something about 60 Hz
fields if we found their risks to be unacceptable. The cost would
be enormous at this point, of course. This leads us immediately to
demand that the risks also be enormous in order for us to justify
taking that step. We don't have good evidence that's the case yet.

>Proving something is dangerous is easy. Subject a test subject to
>enough of the stuff, and you're bound to get some kind of reaction.
>That's how Sacchrine (sp?) got the "dangerous" label, even though
>the exposure required to equal that of the lab rat test was pretty
>high.

That implicitly assumes a linear dose model. We have no evidence
that's the case with 60 Hz fields. Of course even pure water or
pure oxygen can kill if we're exposed to them in high enough
concentrations. Drowning and oxygen poisoning respectively are
well documented. But there are other things which don't require
massive doses to be harmful. In fact, there are some things which
are toxic *only* at low concentrations, and become relatively
benign at higher doses.

I know this seems contrary to common sense, but biochemistry is
complex and not all interactions are as simplistic as we might
think. Some toxins can slip in past the body's defenses if the
dose is low enough, yet get promptly expelled from the body at
higher doses. This sort of insidious action is difficult to detect,
and even harder to prove, but there are cases of it that we know
about. How many cases are there that we don't know? Obviously,
we can't say. Are 60 Hz fields like this? We don't know, but
we do know that they have become pervasive in our environment
in the last 100 years, and that the body has no known evolved
coping mechanisms to deal with them.

>Frankly, I think folks are looking for a boogy-man in these studies.
>In a recent paper for the American Physical Society, David Hafemeister

>pointed out that the earth's magnetic field exposes people to some
>pretty high EM fields when they move through it. Running can

>a field of 4 uV/m or 2 mG @ 60 Hz. A fast nod in .16 seconds gets
>you 40 mV/m and 40 mG respectively. Ice skaters who twirl around
>would be doomed if there were any hazard associated with EM radiation.

I'd suggest that's a strawman. None of those actions duplicates
a 60 Hz field. I suspect that frequency may be a vitally important
factor in the effect of fields on the body. We know that certain
frequencies are important to the body in several contexts. We know
for example that certain sound frequencies can induce nausea in
most people. We know that light flickering at certain frequencies
can induce seizures in epileptics. We know that certain frequencies
are important in the actions of the brain and nerves, IE brainwaves,
synapse firing potentials, etc. And lab studies have shown that
certain frequencies, at low intensities, have clearly visible effects
on cell mitosis in vitro.

>These calculations are straight from Maxwell's laws --nothing fancy.
>The fact is that nobody has been able to show any ill effects at a
>cellular level which were attributable to anything other than RF
>heating effects. That is how the ANSI standard (but not NCRP) went
>about determining what was dangerous.

In vitro effects have been demonstrated at the cellular level. What
we don't know is if the effects are the same in vivo. That's much
more complex, and much harder to observe and document. The problem
with simplistic "nothing fancy" calculations is that Nature is
seldom anything but fancy when it comes to living systems. The level
of complexity is enormous and interactions are often extremely
subtle.

>The fact remains that if there is any hazard associated with 60 Hz
>fields, aside of heating effects, it hasn't been identified.
>Epidemiological studies are difficult to control, as you pointed out,
>because the fields are so pervasive. What you might not realize
>is that power line fields also tend to attract radon (this came
>from the same paper cited earlier). Nobody has identified the
>mechanism by which the few weak positive correlation studies have
>occurred. The small additional risk is just as likely to be a
>secondary or even a tertiary side effect of the exposure.

Indeed, some people have implicated herbicide spraying along
power line right of ways as a risk factor. But as you note,
the fields have become so pervasive that any effect they might
have has been masked in the population, IE we may *all* be
suffering from the effects, and thus have no base of comparison.

>You can say we don't know that 60 Hz EM fields are safe. I'm
>saying no-one has proved they're dangerous, either. If you had

>to take action on something now, how would you rate this risk?
>Personally, I rate it down near the noise level. You're entitled
>to your own paranoia, of course. Being paranoid doesn't mean
>you're wrong, but if you want to get paranoid over stuff of this
>caliber, I can't imagine how you cross the street in traffic...

I'm not paranoid about 60 Hz fields, but I'm not willing to just
casually toss off the idea that they may harbor risks either.
I suspect that they do. They are something new in the environment
in evolutionary terms, and they are incredibly pervasive. I think
it is naive to assume that they don't have any effects.

I'd caution you to recall that eminent scientific authorities
hailed the automobile as the solution to the pollution problem
of the cities in 1910. The pollution problem at that time was
very visible and tangible, horse manure on the streets and
dried windborne manure in the air, which spread disease. The
effects of auto exhaust weren't yet understood, and were dismissed,
prematurely, as "no hazard".

Since as a practical matter I can't avoid exposure to ELF EM fields,
I just "grin and bear it" like the rest of the population. We have to
do that with lots of quantified and unquantified risks in modern society.
Where I think we make a mistake is when we claim "no hazard" in cases
where we don't know if there is a hazard or not.

Something has to kill every one of us eventually, I suppose it might
as well be EM fields as anything else, but it would be nice to *know*
what effects EM fields are having on the population (there's a remote
chance the effects may be positive). My main concern with a premature
"no hazard" declaration from a seemingly authoritative source is that
it will squelch inquiry into any real effects ELF fields may be having
on humans.

As the internal combustion engine powered auto was once claimed to
be the solution to pollution in the cities, the electric auto is
now touted as the solution to pollution in the cities. Are we really
sure that all those varying ELF fields produced by electric autos
in their millions won't themselves be a new, and perhaps more ultimately
damaging, form of pollution?

That's why I am so dubious of Park and his declaration on a subject which
is really outside his area of competence. I know that he plays politics
with science in order to influence research funding decisions. He treats
science as a zero sum game and is quite willing to damage other lines of
inquiry in the hopes of getting funds diverted to his pet projects. I'd
feel better if the assurance had come from biochemists studying bio-electric
effects in living systems.

925. Need GE and Motorola Information

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-15 00:00:00 UTC
From: KMAGLOUGHLIN@delphi.com
Message-ID: <56h0ju$fmc@news2.delphi.com>
Source record: 212779

I really dislike seeing mobile radios in repeater service.

I can't count the number of moblies that I have carried to the dumpster that have burned up due to improper conversions or lack of conversion and just are the product of people not willing to spend money to do the job right and buy a base station with all the proper shielding and stuff in place.

Hey folks, they are not that expensive and any repeater job worth doing is worth coughing up the money to do it right.

I hate it when hams think they are smarter than the people who designed the equipment in the first place. Motorola and GE build repeaters the way they do for reasons, and good ones at that.

BTW, the micor mobile is not always direct FM. The older, pre DPL are phase modulated.

Kevin

930. !!! New Vanity Sweepstakes !!!

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-15 00:00:00 UTC
From: radio@copland.udel.edu
Message-ID: <56hlv8$3pp@copland.udel.edu>
Source record: 212784
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.info,rec.radio.amateur.info

It's almost too late to get your Vanity Check and/or Precedent for
the phone Sweepstakes.

If you would like to be enjoy the immeasurable prestige of being
more senior, or, conversely, having the stamina of fondly remembered
youth, apply for one of our Vanity Checks. Don't just settle for the
same ol' 2x0 configuration. Go binary, hex, bar code. Impress your
friends!

And, why be limited to the same old precedent? Run as much power as
you want! 666 watts for you-know-whom. Use your own initials. "JR,"
"III" slightly higher west of the rockies.

Money talks. Just call 1-900-VanityBob with your credit card right now!
Don't use a cordless or cellular phone! Or, just send a new ICOM 756!
It must arrive before the start of the contest.

Life's too short for modesty! Use the new vanity Q signals...

QG1 I got my first choice
QG1? Did you get your first choice?

QSF I am suing the FCC
QSF? Are you suing the FCC?

QPD I paid $_____ for applications, express mail, lawyers
QPD? How much did you pay?

QBC I got ____ bogus club vanity calls
QBC? How many bogus vanity club calls did you get?

QGF I got flamed ____ times for what I did/said but @#%^#'em!
QGF? How many times have you been flamed for what you did/said?

That's right! Any number can play! Don't be limited to "Q"! Use
the "R" signals or "WW" or whatever! Get the credit for it forever!
It only costs a little more! Remember, this is AMERICA, buddy!

Paid for by Citizens for Fatuous Debate
and Acknowledgement of Ham's Vanity

I am planning to purchase a new Yaesu FT-8000R mobile very soon for my 1997 Ford Escort and was wondering if there were any known problems with the mix.

I do have a stock Ford alarm installed.

I have some mounting ideas, but if others have ideas, too (space is kind of limited) please let me know.

Thanks.

See ARLB0079. Apparently, the FCC has a large number of applications that need some sort of manual "fixing". Many of these have already been assigned calls, but have not been completed and posted.

>I really dislike seeing mobile radios in repeater service.

Tough.

>I can't count the number of moblies that I have carried to the dumpster that
>have burned up due to improper conversions or lack of conversion and just
>are the product of people not willing to spend money to do the job right and
>buy a base station with all the proper shielding and stuff in place.

The only real difference in the GE base stations and the mobiles is the
PA heatsink, the AC supply, and a different control board (which you're
going to discard anyway). The exciters are identical, the receivers
are identical, and the PA is identical, except for the mentioned larger
heatsink. That bigger heatsink isn't needed if you derate the PA to a
reasonable amount of power. And to put it nicely, the GE AC supply
sucks.

Because of its favorable location and superior antenna, a repeater should
normally run 1/2 to 1/3 the power of the mobile units it is to service. And
that works out just dandy, because when you turn a mobile PA down to 1/2 to
1/3 its rated power, it runs nice and cool. The only burned up PAs I've seen
have been when some yahoo was trying to make an alligator repeater (all mouth
and no ears). There's absolutely no reason to ever run a repeater at more
than 50 watts.

The shielding in the base stations isn't any more effective than in
the mobile rigs, the packaging is just bulkier. If there is no desense,
the shielding is good enough, and my repeaters don't show any desense.
Enough said.

There's no reason to pay a premium for a base station when the common
mobiles can serve just as well, better if they have to fit in a GE tower
cabinet with a duplexer. The base stations are designed to be located
inside, and they don't survive well at all on a tower. The mobiles are
quite content to be in a standard GE tower box. Mounting the repeater
at the antenna is always a preferred choice because feedline loss
drops to nil for both transmit *and* receive.

>Hey folks, they are not that expensive and any repeater job worth doing is
>worth coughing up the money to do it right.

But it is foolish to buy the wrong thing, and the base stations are the
wrong thing. They belong indoors. Towers are wet. The mobiles don't mind,
but the base stations die unless you take extraordinary steps to repackage

them.

Now if you can get your hands on an honest to gosh GE repeater intended to mount in their standard tower cabinet, by all means go ahead and use it. Of course you'll be discarding their antique controller anyway, and replacing their dreadful AC supply with one that'll survive. So all that will be left is the exciter strip, the receiver strip, and the PA with that oversized heatsink. Except for the heatsink, those are the same modules you 'd find in the Mastr II mobile. The only difference is that the repeater will fill the cabinet rail to rail while you have to fabricate a panel to mount the mobile in the box. But you're going to have to do fabrication anyway to mount the new controller, duplexer, and power supply, and the extra cabinet room the mobile gives you makes that easier.

It isn't for real, because SCRRBA's main modus operendi is not to reply to any contact attempts made by outsiders. They exist for the benefit of a dozen or so "old boys" who essentially have coordinated 440 for their exclusive benfit. There are almost no open repeaters.

This has been defended on the grounds that hey, there's no divine right to open repeaters. It is up to the trustees. However, the fact that So Cal's 2 meter band is mainly open repeaters illustrates that there is no shortage of potential trustees who are happy to supply equipment and expertise in return for being coordinated for open repeaters for the benefit of all.

Compared to SCRBBA, the old Kremlin was a hotbed of democracy, open discussion, and dissent.

I bought two replacement packs for my ICOM BP-7S batteries from Yost. I later decided I didn't want to hassle with replacing the individual cells, so I returned the packs unopened and still shrink wrapped and asked for credit toward two higher priced BP-7S battery assemblies. They sent me the two BP-7S batteries, charged me full price for them and never credited me or returned the two packs I had returned for credit.

I avoid buying anything from E.H. Yost now like the plague.

Electronic Update
November 15, 1996

IN THIS UPDATE:

* Some Gate 2 applicants in limbo
* Hams in the hot zone
* Satellite aficionados met
* DOVE-OSCAR 17 update
* Solar manic depression
* Ham-suspect arrested in McKim murders
* Tiago Frederico, CT1WW, SK
* In Brief: W1AW schedule change; Vanity connections; Identifying former call sign holders; Happy Birthday!; Photos from space

---

VANITY UPDATE: SOME FIRST-DAY APPLICATIONS IN LIMBO

The FCC calls them WIPS--"works in process"--applications that need some kind of special handling. But for up to 12% of first-day Gate 2 vanity call sign applicants, WIPS means "no new call sign." It now appears that as many as 550 first-day applications ended up in the WIPS pile, either because the FCC was unable to match one of the applicant's call sign choices or because the application contained "inconsistencies"--some as simple as a date of birth on an application that was missing or failed to match one already in the FCC's database. Other problems included an incorrect call sign on an application, a name change not reported, or putting first and last name in the wrong order. The FCC said this week that it hopes to clear its decks of all first-day vanity WIPS by today (November 15).

There's some encouraging news: An FCC spokeswoman in Gettysburg says that if you're in the WIPS pile for a reason other than "no available match," it does not necessarily mean you "missed out" on getting one of your call sign choices. A new call sign already may have been attached to your application. As of November 13, a handful of Gate 2 vanity call sign grants already had dribbled out of the FCC's spigot, bringing the grand total of successful Gate 2 applicants to 3805.

One of them was Lester Johnson--formerly K4PTB and now W4LQ--of Rockingham, North Carolina. "I would like to personally thank everyone connected with the vanity call sign program at HQ," he wrote. "After nearly 40 years as K4PTB I decided to try for one of the 1x2 calls. Most of the operators in the area kept telling me I was wasting my time and money. But, I suppose I

lucked out. I learned this morning that I did indeed get lucky and was issued the old/new call sign W4LQ. It was not my first choice, but I certainly am not complaining." John Warinsky, formerly KD9NO, of Shoreview, Minnesota, reports he got his first pick, K9NJ (he's a New Jersey native).

One who was not so fortunate was Steve Wolf, NO8M, of North Olmsted, Ohio. His first-day Gate 2 application ended up in the WIPS pile, and he has since determined that all of his choices were assigned to other hams. So he's been working up a new list to submit another vanity application and trying to maintain his sense of humor. "If you want help getting over an initial rejection, have your kids look over the list of available calls," he suggests. "I bet you will wonder why you asked for the other ones."

Those whose applications end up being dismissed because their choices were already taken can take heart that all the "good" (ie, 1x2) Extra class call signs have not been used up--not by a long shot. As of this week, more than 6000 1x2 calls in all US districts were still vacant--substantially more than the number of vanity call signs the FCC has issued under Gate 2 to date.

The FCC will mail to all unsuccessful vanity applicants a copy of their application (including FCC processing numbers) and a copy of their check. To request a refund, applicants then must send a letter to the FCC, 1270 Fairfield Rd, Gettysburg PA 17325-7245, along with their taxpayer ID number (Social Security number). The FCC will not apply your first $30 filing fee toward a second application. You must request a refund if you want your money back.

Some FCC gaffes turned up among the Gate 2 vanity call sign assignments. The call sign AT6A was issued to KK6VY in Santa Rosa, California. Unfortunately, the AT prefix belongs to India, not to the US. A California club station got a new call sign bearing an Alaskan AL6 prefix, not permitted in the lower 48. The FCC says it has dealt with these mistakes.

Still not known is just when Gettysburg will process Gate 2 applications that were received after September 23, the opening day for Gate 2. An FCC spokeswoman said this week she had "no idea" when that would happen. Applications from approximately 1400 hams arrived at the FCC in the days following the opening of Gate 2.

Although many hams learned of their new Gate 2 vanity call signs via the Internet within hours after the FCC made the information public, Owen Garner, formerly W1SBM, of Hampden, Connecticut, found out that he was K1AF during a casual ragchew on 160-meter CW. Owen mentioned to the other op, Dave LeDuc, K1EPJ, of Newton, New Hampshire, that he was waiting for his new vanity call sign call. Dave checked the Internet and was able to tell Owen that his new call was K1AF. "So I began the QSO as W1SBM and completed it as K1AF," he reports. The next day, Owen related his experience to Timothy Hutcheson, KT4LY, in Pensacola, Florida, who also was waiting for his new vanity call sign. Timothy checked the Internet and found out he'd been issued K4LY, which he used to complete the QSO.

A footnote: although the FCC did not release the initial day-one grants until Tuesday, November 5, the applications actually were processed--and the licenses dated--on November 4. The FCC spokeswoman said that computer problems on the morning of November 5 prevented the release of the database file until late that afternoon. The FCC says hard copies of the November 4 grants were mailed on November 8 and November 12, so new call sign holders should have their new tickets soon.

FCC PROPOSES NEW SERVICE FOR REALLOCATED 2.3-GHZ SEGMENTS

The FCC has proposed to create a new Wireless Communications Service (WCS) in the 2305-2320 and 2345-2360-MHz bands and to award licenses on the basis of competitive bidding. The bands include a 5-MHz segment that Amateur Radio shares with government services between 2305 and 2310 MHz. Just before it adjourned in October, the 104th Congress approved a provision as part of the much larger appropriations bill that directed the FCC to put the 30 MHz of spectrum in the 2.3-GHz region up for competitive bidding to help balance the budget. It's believed to be the first time the Congress has ordered the reallocation of specific frequencies.

The National Telecommunications and Information Administration (NTIA) had identified for reallocation the amateur segments 2300-2310 MHz and 2390-2400 MHz in May 1994, so reallocation of part of that subband came as no surprise. At its special session in October, the ARRL Board of Directors approved a proposal to seek an increase in the amateur service allocation status--from secondary to primary--in the 2300-2305-MHz segment.

The FCC says the new WCS service would allow licensees to provide any fixed, mobile or radiolocation service, or satellite Digital Audio Radio Services (satellite DARS), consistent with the international frequency allocations for these bands. The Commission also proposed to adopt no restrictions on eligibility for a WCS license and to allow WCS licensees "to partition their service areas, disaggregate spectrum, and franchise portions of their spectrum or service areas on a leased basis."

Competitive bidding for the two segments will begin no later than next April 15. Comments are due by December 4, 1996, and reply comments by December 16, 1996.

HAMS IN THE HOT ZONE: CALIFORNIA FIRES

California wildfires tested the mettle of ham radio operators in northern San Diego County as Northern District ARES members responded to a brush fire in the Harmony Grove area of Carlsbad on the afternoon of October 21. Frank Littlebury, KE6WOE--the Northern District assistant emergency coordinator in the San Diego Section--reports that over the next 40 hours, 45 ARES personnel (backed up by other volunteers) stood by if needed to support four separate Red Cross shelters/evacuation centers and to provide supplementary communication support to the Red Cross, local fire departments, sheriff's office and county and city emergency operation centers in Northern San Diego County. Northern Division ARES maintained a net on the Palomar Amateur Radio Club repeater on 146.73 MHz from October 21 until late October 22, to assist Red Cross shelters. The link was instrumental in providing communication for

no fewer than 400 people who were displaced by the fire. Littlebury was the primary ARES net controller. He had help during the emergency from Dennis Shirrel, K7DCG, the Northern District EC.

Littlebury reports that volunteers racked up some 1650 manhours during three major brush fires in the area caused by Santa Ana winds and low humidity. Official reports indicate that 131 homes were damaged or destroyed and six people were injured (two critically).

Planning was the key to a successful effort. Littlebury said the Northern District has had a major ARES emergency plan development effort under way since mid-summer. "Each of the 12 separate city/community ARES emergency coordinators was asked to contribute and take part in the overall District Plan development effort as well as write a local city/community Emergency Plan to supplement district's general effort," he reports. The plans were completed in late September. In conjunction with ARRL's annual Simulated Emergency Test (SET) October 12-13, the Northern District held a "no-notice" communication exercise to test procedural and communication provisions of the district and local plans. Having an emergency plan in place for the first time was a big plus in handling the actual emergency a few weeks later, Littlebury said. "We feel fortunate to have had a successful exercise--doubly so for having had the opportunity to put our hard work in planning and training to use in so successful a manner in support of an actual emergency." Littlebury said that having "been there" and "done that" made his volunteer team firm believers in the value of a written, comprehensive emergency plan, training to execute that plan and a dedicated ARES support base to carry it out. "Our thanks to ARRL for an excellent ARRL Emergency Coordinator's Manual, upon which we based our planning efforts," he said.--Frank Littlebury, KE6WOE; Ellen Utschig, N6UWW

SATELLITE ENTHUSIASTS MEET IN TUCSON

[Photo caption: ARRL Vice President Joel Harrison, WB5IGF, accepts a plaque from AMSAT-NA President Bill Tynan, W3XO. The plaque commemorates the dedication of the Phase-3D spaceframe to the ARRL during the 1996 AMSAT-NA Space Symposium in Tucson, Arizona, November 8-10.--Steve Ford, WB8IMY, photo]

More than 300 amateur satellite operators gathered at the Holiday Inn-City Center in Tucson, Arizona, November 8 through 10, for the 1996 AMSAT-NA Space Symposium

Friday's forums included an update on the SEDSAT project, the PICOSAT system and plans for Amateur Radio aboard the upcoming International Space Station. Phil Karn, KA9Q, offered a spread-spectrum tutorial and Assi Friedman, 4Z7ABA, updated everyone on the status of TechSat.

On Saturday, the attendees were treated to a Phase 3D progress report. Dick Daniels, W4PUJ, said that static system testing would soon be under way in France. (Phase 3D just passed one of its dynamic tests--a vibration test--with flying colors.) He also announced that the satellite would be powered up for the first time next month.

Jim White, WD0E, and Tom Clark, W3IWI, announced that DOVE-OSCAR 17 had returned to the air after a successful recovery. The satellite required a clever software "Band-Aid" to circumvent the effects of radiation damage (See DOVE-OSCAR 17 UPDATE below)

Ray Soifer, W2RS, and Richard Limebear, G3RWL, discussed the future of the amateur satellite program. According to their research, most hams favor SSB or CW operation with "entry level" satellites such as RS-10 and RS-12. Ray and Richard both warned that few, if any, such satellites are in the planning stages to replace the aging fleet. In contrast, there are a number of new digital satellites, but they are used only by a relative minority. A lack of new EasySats, they contended, could make it much more difficult to attract new hams to satellite operating.

Darrell Emerson, AA7FV/G3SYS, was the featured speaker at the Saturday night banquet. Darrell is a recent contributor to QST. He authored Radio Observations of Two Solar Eclipses in the February 1995 issue of QST, and The Radio Sky (Parts 1 and 2) in the June and July 1996 issues of QST, as well as articles for other ARRL publications. He is also known in the scientific community through his work at the National Radio Astronomy Observatory.

Another highlight of the banquet was dedication of the Phase 3D spaceframe to the ARRL in recognition of contributions totaling more than $530,000. ARRL Vice President Joel Harrison, WB5IGF, accepted the dedication plaque from AMSAT-NA President Bill Tynan, W3XO.

The time and place for next year's AMSAT-NA meeting has already been set. It will be held at the Delta Airport Hotel in Toronto, Canada, on October 17 through 19. Details will be published as they become available.--Steve Ford, WB8IMY

DOVE-OSCAR 17 UPDATE

After nearly a year of problematic operation following an onboard computer crash last December, scientists on the ground may have finally pinpointed the source of problems plaguing DOVE-OSCAR 17. Jim White, WD0E, of the AMSAT DO-17 team, reports that on November 5, a portion of the operating software was successfully loaded into DOVE and executed. "The first few minutes of telemetry shows the satellite is in pretty good shape, with some expected degradation of the solar panels and batteries," he said. The software included a change by Keith Butts, KN6K, that increases the number of times per second the hardware watchdog timer is reset. White says that extensive tests over the past year--and coordination with the WEBERSAT team--have indicated an intermittent watchdog timer may be the culprit that has made it impossible to keep software running for more than a few days in either satellite. All other hardware testing on DOVE had proved negative.

White says time will tell if the command team reached the correct diagnosis. At this point command stations have all the telemetry they need. However, if you don't hear DOVE on 145.825 MHz when it is in range, send an e-mail message to wd0e@amsat.org indicating the time you listened. If the satellite crashes again, it may be valuable to know as closely as possible when it

failed. DOVE is sending in the normal PHT telemetry format, the S-band transmitter is on, the telemetry rate will vary from 20 to 60 seconds, and the transmitter power will vary from 2 to 4 W. All previously used telemetry decoder programs will work as they have before, including several shareware programs and TLMDCII, available from AMSAT-NA headquarters.--Amsat News Service; Jim White, WD0E

SOLAR MANIC DEPRESSION

Solar prognosticator Tad Cook, KT7H, in Seattle, Washington, reports a rise in solar activity over the past few days, with solar flux moving steadily above the three-month average of 70. It is expected to top out in the mid-70s by November 16, drop to 70 by the middle of next week, and to 68 by December 1. After that, flux values are expected to rise above 70 again after December 7.

Geomagnetic disturbances are rising and should peak today and again around November 19. Perhaps this period of days with solar flux above the recent averages is a sign that the cycle is about to take an upward turn from the bottom. When we start seeing weeks of solar flux numbers that are above the previous 90-day average, we will know that the wait is over.

A packet message from Dick Farman, K2QR, ARRL Technical Coordinator from Western New York, points out that while present HF propagation is not particularly exciting, anything can happen on VHF. The astute VHF DXer usually ignores the reported solar flux and concentrates on the A and K indices, he says. Geomagnetic field disturbances may be sufficient to cause aurora, and the aurora can be reflective at VHF. As pointed out in an earlier report, the A and K indices provide an indication of geomagnetic activity and, therefore, can tip off VHF operators to possible band openings. When the A index is about 20 and the K index is 4 or 5 (or greater!), conditions are often good for VHF aurora. Hollow-sounding signals on 80 meters mean it's time to fire up on VHF and point the antenna north. Phase variations in signals reflected from the auroral curtain make this propagation mode suitable for CW and sometimes for SSB, but not for FM, which becomes too distorted. Contacts are most likely on 10, 6, and 2 meters. As the intensity of the geomagnetic storm increases, higher frequencies are affected. As electrons trapped in Earth's magnetic field spin down and lose energy, they emit photons, and the aurora becomes visible--sometimes as streaks of light, sometimes as "curtains." It's often a tough decision whether to work the bands or go outside to watch the light show!

Sunspot numbers for November 7 through 13 were 0, 0, 11, 11, 14, 27 and 14, respectively, with a mean of 11. The 10.7-cm flux was 68.5, 69.1, 70.2, 71, 71.5, 72.2 and 73.1, respectively, with a mean of 70.8. The planetary A indices for the same period were 5, 4, 11, 6, 3, 8, and 11, respectively, with a mean of 6.9.

Sunspot numbers for October 31 through November 6 were 0, 0, 0, 0, 0, 0 and 0, respectively, with a mean of 0. The 10.7-cm flux was 69.7, 70, 69, 69.5, 69, 68.3 and 69.2, respectively, with a mean of 69.2. The planetary A

indices for the same period were 8, 2, 2, 2, 9, 6, and 7, respectively, with a mean of 5.1.

HAM-SUSPECT'S ARREST IN MURDER CASE FOLLOWS TV EXPOSURE

A ham-radio acquaintance of the late VHF/UHF pioneer Jim McKim, W0CY, has been charged in the July murders of McKim's widow, daughter and a great-grandson at the McKim home in Salina, Kansas. The arrest of 26-year-old Alan Eugene White, KA0QNB, came shortly after the November 9 broadcast of the TV program America's Most Wanted, which publicized the case and the fact that White had disappeared from the Salina area and was wanted for questioning. Authorities caught up with White at a Boston, Massachusetts, homeless shelter. Boston Police acted on a tip from someone who had recognized White from the TV program.

Kansas media reports say that Administrative District Judge Daniel Hebert signed warrants November 12 charging White with the murders of Dolores McKim, 80, of Salina; her daughter, Carol Abercrombie, 56, of Soddy-Daisy, Tennessee; and McKim's great-grandson, Christopher Abercrombie, 5, of Greenville, South Carolina. White also was wanted for a parole violation and faces other charges.

White has held a Novice class since late 1992. He and Jim McKim both belonged to the Central Kansas Amateur Radio Club, and White reportedly had visited the McKim residence for club functions. Jim McKim died in February.--Bruce Frahm, K0BJ/Bill Pasternak, WA6ITF

TIAGO FREDERICO, CT1WW, SK

Well-known DXer Tiago Frederico, CT1WW, of Sao Joao da Pesqueira, Portugal, died October 31. He was 52 years old.--Jose de Sa

---

In Brief:

* W1AW schedule change: Starting January 1, 1997, W1AW will offer morning code practice and bulletins on Thursdays and Fridays only. Starting times will remain the same: code practice starts at 1400 UTC; the CW bulletins start at approximately 1500 UTC; and the RTTY/AMTOR/ASCII bulletin session starts at approximately 1600 UTC.--Joe Carcia, NJ1Q

* Election connections: Among those not re-elected in the November 5 balloting was freshman Republican Congressman David Funderburk, K4TPJ, of North Carolina. In Pennsylvania, incumbent Congressman Paul McHale, a Democrat, defeated Republican challenger Robert Kilbanks, WB7NNC.

* Vanity connections: Used to be that those 1x2 "W" call signs marked an old timer. The past and present vanity call sign systems put an end to that. Thirteen-year-old Christina Rea, ex-N2YBU, of Colonie, New York, received one of her top choices, W2GY, in the recent Gate 2 lottery. She's the daughter of proud papa Peter Rea, WZ2X, and very active with local public service events. She got her Extra ticket 14 months ago. W2GY has had at least six previous holders over the years. Possibly the first--Walter Dietz

of Yonkers, New York--held 2GY around 1915. Corwin Crosby of Long Island City (and later Scarsdale), New York, held W2GY from around 1930s until 1946 or so. Charles Bowen of Audubon, New Jersey, held the call sign the longest, from around 1947 until around 1976, when he moved to Florida and obtained K4YZ. W2GY was reissued as a vanity call sign in the mid 1970s (the previous holder is a Silent Key). W2GY has another historic connection; the Reas live in the shadow of the transmitting tower of WGY, General Electric's first AM commercial broadcast station.--The Hudson Division Loop

* Identifying former call sign holders: Some vanity call sign holders have become interested in the genealogy of their new call signs and want to know who the former holders were. While we don't have the resources to track down this information at HQ, those interested might try the FCC's official duplicating contractor, International Transcription Service (ITS). Among other things, ITS can research amateur call signs to determine when they were first issued and to whom. The cost of this service varies depending on the volume and research time involved. Research time is $15 per hour, billed in quarter-hour increments. Requests can take up to one business week. Additional charges apply for expedited service. ITS is located in the FCC's Gettysburg Office. Write ITS Inc, 1270 Fairfield Rd, Suite 24, Gettysburg, PA 17325-7245; tel 717-337-1433; fax 717-337-3409.--Tom Hogerty, KC1J

* Happy Birthday! Wilbur E. "Bip" Bachman, W6BIP, of San Francisco, California, celebrates his 85th birthday tomorrow (November 16). "Bip" remains an active CW operator, and his is a familiar call sign in the ARRL November Sweepstakes and other contests. Bill Haddon, N6ZFO, who's been acquainted with W6BIP since the 1950s, says, "Bip's kindness, professionalism, expertise, and perseverance at CW communication have always been an inspiration to me."

* Photos from space: A new book cowritten by astronaut Jay Apt, N5QWL, has more than a casual ham radio connection. The book on photographs of the Earth taken from space, Orbit: NASA Astronauts Photograph the Earth, was coauthored with Michael Helfert and Justin Wilkinson, two Earth-observation scientists at the Johnson Space Center. Space writer and consultant Philip Chien, KC4YER, reports the book was written during the team's personal time, evenings and weekends, while Apt was in training for the STS-49 mission. He says the book contains "incredible-quality photos, with an innovative computer digitizing method to retain the original image quality." Apt wrote the introduction to each chapter. In the section on Australia, he said "I recall many conversations at night with hams in Australia and New Zealand who had gotten up in the wee hours just to talk to us as we flew overhead. I've been surprised by a call from a ham from Hilo, Hawaii, using a tiny radio in his car. I have seen the lights of the Palmer Research Station at the tip of Antarctica, and called the scientists there on our ham set. All of these conversations make me feel more connected to the people and the lands we are flying over." Apt wrote how Maggie "Rita" Iaquinto, VK3CFI, in Australia "relayed my ham radio signals at two in the morning her time so I could talk from Endeavour to a doctor aboard the Russian Mir station." Orbit is published by the National Geographic Society and distributed by Random House (ISBN 0-7922-3714-5). It retails for $40.

==========

The ARRL Letter is published by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, KB6ZV, President; David Sumner, K1ZZ, Executive Vice President.

Archive-name: radio/phonetic-alph/full
Posting-Frequency: six weeks

Phonetic Alphabets (Alpha Bravo etc)
November 1996

There is a widely known alphabet Alpha Bravo ... Yankee Zulu.
Such alphabets are variously known as phonetic/radio/
spelling/telephone alphabets, and the term analogy alphabet
is also used. This collection currently includes alphabets
for the following languages:

English, French, German, Dutch, Flemish, Spanish,
Portuguese, Italian, Rumantsch, Danish, Norwegian,
Swedish, Finnish, Czech, Slovak, Polish, Hungarian,
Croatian, Serbo-Croat, Romanian, Turkish, Hebrew,
Russian, Swahili, Kwanyama, Ndonga, Afrikaans,
Chinese and Esperanto.

This posting supersedes the one of 4th October. There are
numerous changes, and new material includes:

Ack Beer
Andries Boetie (Afrikaans)
Africa Bombay
Arthur Betty
Australia Bombay

My thanks to the many contributors, not all of whom are
acknowledged below.

Please report any errors. Please also mail or post any
further information or anecdotes, or additional references.

In my capacity as the editor of this collection I have no
objection to the further electronic distribution of this
posting in full in circumstances where it is likely to be of
interest, and where a document of this length is acceptable;
in the case of Web pages I ask that care be taken, as it is
easy to mangle something. Note that there is also a brief
version of this collection.

Following discussions last year this article is not now
posted to alt.usage.english. As of 10th April it is now
crossposted to various *.answers groups.

A copy of this article and some other material can be found
on the World Wide Web at:

<http://www.cl.cam.ac.uk/users/bck1/menu.html>

Copies of this article may also be found at:

***** ENGLISH *****

The NATO phonetic alphabet:

Alpha Bravo Charlie Delta Echo Foxtrot Golf Hotel India
Juliet Kilo Lima Mike November Oscar Papa Quebec Romeo
Sierra Tango Uniform Victor Whiskey Xray Yankee Zulu

[This alphabet dates from about 1955 and is approved by the
International Civil Aviation Organization, the FAA and the
the International Telecommunication Union; note that
different bodies prefer different spellings, so one also
sees: Alfa Juliett Juliette Oskar Viktor]

[The alphabet above is from the Cambridge Encyclopedia of
Language. An alphabet with Alfa X-ray can be found in The
U.S. Department of Defense Dictionary of Military Terms.
Alfa Juliett X-ray appears in A Concise Dictionary Of Slang
And Unconventional English]

[UK police use Indigo(??) instead of India.
German army handbook 90/91: Alfa Foxtrott Juliett.
Italian version: Alfa Charly FoxTrot Giuliet Romio Wiskey.
An Indonesian phrase book: Beta Ultra Volvo Whisky X-ray.
A precursor of the present alphabet (1952?) had: Alfa Coca
Metro Nectar Siera Union Whisky Extra]

Phonetics for digits (from an amateur radio FAQ):

zero one two tree fower fife six seven eight niner

From the Cambridge Encyclopedia of Language:

zero wun too tree fower fife six seven ait niner

'Telecom B':

Alfred Benjamin Charles David Edward Frederick George Harry
Isaac Jack King London Mary Nellie Oliver Peter Queen Robert

Samuel Tommy Uncle Victor William Xray Yellow Zebra

[Found also in Swedish, Dutch, Hungarian telephone directories. An 'analogy alphabet' in a Kenyan directory has Charlie and no Y. A Swiss directory: Andrew Charlie Lussy Queenie Sugar. French/German vocabulary books: Andrew Charlie Lucy Mike Nelly Sugar Xmas. English phrase books for Spanish/Italian speakers: Charlie]

'British A':

Amsterdam Baltimore Casablanca Denmark Edison Florida Gallipoli Havana Italia Jerusalem Kilogramme Liverpool Madagascar New_York Oslo Paris Quebec Roma Santiago Tripoli Uppsala Valencia Washington Xantippe Yokohama Zurich

[An 'international' alphabet in a Dutch telephone directory has: Danemark. A 'French' alphabet in a Hungarian directory has: Cassablanka Danemark Que'bec Upsala Zu"rich.
An 'international' alphabet in a business book for French has: Italy Kilogram Zu"rich; the corresponding book for German has: Italy Kilogram Xanthippe Zu"rich]

[West Berlin telephone directory 1965: Danemark Je'rusalem Madagaskar Que'bec Upsala Xanthippe Zu"rich.
Santa Fe (Argentina) 1955: Dinamarca Habana Jerusale'n Kilogramo Nueva_York N~andubay Upsala Wa'shington Xantipo Yokoama.

One of his former calls, "N0VA", was taken in Gate 2. I think"KV4FZ" is still vacant.

I hate to interject into primarily religious discussions as there is usually no winner.

However, I had to this time.

I am an engineer for a hi-tech communications electronics company. As such, the tech portions of the test were no problem for me as I studied for them in the car on the way to test. The code test was more difficult. To pass this test, I actually had to spend about 15 minutes a night for two months listening and copying code off the air. It wasn't that tough and quite frankly, I'm still not good enough to work a contest.

But I did it and I was willing to spend the time to do it.

I belong to an active club in Florida. We have over 300 members. Some are active in contesting. Some in emergency management. And some just come once a month to get coffee and donuts and chat with their friends.

It's no surprise that the club has divided into cliques. It's a natural result as each of us has different desires.

But I can say this. The most active Hams in this club are the most technically capable and are also the ones who took the time to upgrade. The other no-coders who joined when I did (I started out as a Tech) have neither the skill set nor the desire to advance and they are quite happy working 2 meters with their friends.

Opening membership up by removing the code requirement will not add forward thinking hams to the group. We are here and we are working on new radio technology every day.

Opening membership up will merely crowd the bands with glorified CBers because they can memorize test answers and get legal priveledges to operate over a kilowatt. The resulting complaints and additional maintenance of this situation will eventually result in public disgust and the sale of the frequencies to the highest bidder.

I firmly believe this and the proof is in the membership.

The code test is not that hard and anyone who really wants the priveledge can spend a little time earning it.

Just my humble opinion.

Back to net.

Steve KT4FY

948. Peter Dulac KC4WWU add this to the list of ones not to deal with

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-15 00:00:00 UTC

Message-ID: <328cdaff.1847587@news.rdu.bellsouth.net>
Source record: 212802

I purtchased a IC-3230H from him via Fed Express. The radio
had no RF output on UHF. When I opened the case to see if anything
was possibly disconnected...a capacitor fell out of the case and I
could smell the odor of burnt transistor smoke.
Of course he dinies any of this and upon confronting him via
email he said this and I quote,
>>Let me know what it costs for the repair
>>and we'll see if we can work something out. Again I'm sorry this happened.
>>
>>73 de
>>Pete
>>kc4wwu

BTW here is what he said originally:

>I have for sale an ICOM 3230H dualband
>>It is in Great Condition
>>Comes with all original accessories
>>Also comes with Speech Unit &
>>DTMF / PL Decode Unit
>>
>>Asking $350.00 plus shipping obo

Anyway...he can now say what he wants in response to this but
the facts are that the radio was not operating properly and I had to
spend several hundred dollars for ICOM to repair it.
The money is spent and I now have a great radio....so I have
the last laugh.

1958 or 1959 is about right. My father got some CBs to use in his small business in 1964 (which was one of the purposes for the Citizen's Band to exist), and he met some other CBers who had been active for several years. His first call was KCI-3383, but some of the earlier calls began with "5Q".

Hello.
I've just updated my FTV program, which does FAX & SSTV using a SoundCard, to decode Baudot using the same (FM) demodulation engine.

Here is a run down of the more interesting features:

(1) It keeps the demodulated signal in memory, so that the signal can be analysed again at a different keying rate or polarity! Garbage can be resampled on the fly, which means that minutes of received signals decoded at the wrong baud rate or keying polarity are recovered, on the fly, while still receiving.

(2) Keying rate and polarity are analysed automatically - standard baud rates are automatically set following analysis.

(3) Tuning oscilloscope available at all times, without loss of copy.

(4) Program works in real time.

(5) I wrote it, and I love it - I myself can't believe it works so well!

Download your copy of FTV from my web site, at:
http://www.geocities.com/SiliconValley/2504

System requirements, and the standard features of FTV are described in the following page:
http://www.geocities.com/SiliconValley/2504/ftv.htm

By the way, AM signals from low orbiting weather satellites are also decoded - no extra interfaces needed. Demodulation mode is user selectable in software.

Hope you all have a load of fun receiving 'words and pictures' - I hope to get some feedback !

All the best from Brian, 9H1JS, on the Island of Malta.

957. Re: Closed Repeaters

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-16 00:00:00 UTC
From: Mike <mikes@fishnet.net>
Message-ID: <328E13F1.1F3C@fishnet.net>
Source record: 212663

It is not really a matter of whether to believe or not. As these comments are only my opinions based
on what I see as happening to the 70 Cm band. It is generally understood by most attempted users in
the SO CAL area, That SCRRBA is run by a small click of individuals who want to maintain private radio
systems without having to pay commercial fee to do so. I am not a part of any group, other than a ham
who is tired of the monopoly SCRRBA has created at our expense.
Here are a few numbers for you to think about, and are easily verified:
440 MHz repeaters
44 open repeaters
15 closed repeaters
437 private repeaters.
Now consider this. the 70cm band is 10 MHz wide! Now take the 2 meter band which is only 4 MHz wide:
232 open repeaters
42 private repeater
15 closed repeaters.
this is a striking difference. But then the 2 meter band is not coordinated by SCRRBA. Not that I am
trying to bully you into seeing things my way, I am just giving you examples of why I think SCRBBA is
dirty. There is not wayto contact them. No published Phone number, unless you belong to ckick and mail
that is sent to them goes unanswered.

How about the 1.25 meter band, 222 to 225 MHz.
118 open repeaters
36 private repeaters
22 closed repeaters
And that is after we lost I think it was 2 MHz to private business.

The 23cm band, 1240 to 1300 MHz is more even:
45 open repeaters
52 closed repeaters
59 private repeaters
I do think there are good reasons to have closed and private repeaters. They should be reserved for
linked repeater systems. Those who operate those systems have gone to great expense to create the
linked systems and users should donate to the system. I do belong to a closed systems of 17 linked 23
Cm repeaters. Has unbelievable coverage of the Sothern Calif area. I think I should donate to the

system. Each machine cost nearly $5000 to put up.

thats my nickle ninety eight cents worth.

Ahaa yes the 435 machine, what a great rescource of amusement. I've herd this reapeater all over the southern California area. It is truly a national rescourse.

Going to the TRW swap meet each month, and listening to goings on is great. A good fried of mine sent 435 tapes to me while over seas, simply great.

I live in the Antelope Vally, and because the reapeater was down this morning I talked to (I think) Fish Man Bob, I think he said he was in Orange County. But due to Frank not being able to hear me I was walked on.

What type of person uses a word like "sophomoric", this means that when you vist LA, just listen, no one whats to hear you.

God bless Roy Tucker, for keeping the machine up and going. But right now its down.

Jay at jay123a@ptw.com

The Class D Citizens Band opened up in 1959. As I recall, the FCC
was trying to create a radio service for "lite" users-- small businesses,
mom calling dad to bring home milk, etc. The original _regulations_ were
quite specific about what kinds of communication were permitted and
forbidden
(like "casual" conversation).Since the allocations and equipment for more
serious users such as Business Band, Mobile Telephone and Amateur Radio
were difficult to obtain and use, the Powers That Were felt that a small
chunk of mostly unused spectrum (a few hams and diathermy) would be perfect
for the new service. The TV shop I worked for at the time had a base and 2
or 3 mobiles. I believe the _license_ permitted you up to 4 or 5 mobiles
per callsign.

One minor snafu-- the prefixes of the FCC callsigns issued were based on
the Radio District in which the station was licensed, so our callsign in
Michigan was 19W3096. Unfortunately, it was pointed out later that this
scheme violated international callsign allocation agreements (AA-AL,K,N,W
for the USA). The licenses were renewed with the later more compliant
KBNF-2673 format.
We all know what eventually happened, eh, good buddy?

>kc8cwp

If you are a licensed ham ... the FCC issued a ruling exempting local scanner laws to the extent that licensed hams who have equipment that receives out of band are exempt from such local laws. However, that doesn't stop local government idiots from giving you a hard time, including confiscating your radio, etc, until you show them the FCC ruling in court. The ruling should be in the latest editions of the ARRL's The FCC Rule Book.

One of my net controls for the upcoming Seattle Marathon, for which I direct the ham communications, is an employee of AEA. One of the repeaters we are using belongs to an employee, possibly one of the founders. They haven't mentioned anything like this to me so I wonder if this is a hoax. What is the source of the above rumor?

My father is West Palm Beach, FL, is interested in amateur radio, but doesn't know where the clubs are in his area to get started. Further, to get to a club meeting, he may require a ride (after dark).

He has bought a small set with which to listen, but hasn't been happy with what he has found thus far in West Palm. (He is relatively new to that area.)

If you can help a senior, email me (including your telephone number) and I will contact you. Thanks.

978. Re: can someone explain intermodulation?

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-16 00:00:00 UTC
From: Lambda <lambda@vari-wave.com>
Message-ID: <328E66C9.1FF0@vari-wave.com>
Source record: 212684

Well, Carl had the best response concerning intermodulation.

If you really need an explanation about intermodulation, send me an SASE and I will send you a copy of my magazine article about intermodulation and co-channel interference which was published earlier this year in a commercial two-way radio magazine. E-mail me for the address or look me up in the callbook or servers.

This particular subject kills me. I even wrote a letter to the ARRL complaining about Icom ads stating that their radios stopped intermodulation. That's false advertising...and it's not the first time I have called their attention to this matter. Yeah, it's just a hobby, but heck - let's get it right. Isn't that what this service/hobby is all about?

Back in the 1970 Bill started the Trans Atlantic Crossing Net. He used to sheppard boats across the Atlantic from the Mediteranean to the New World. I would love to get in touch with Bill. I can't remember his last name or his call sign. He used to operate from Morocco. He worked for AID in Morocco. His wife's name was Ingrid, but I heard they had gotten divorced.

Any information such as call US callsign or last name that would help me find Bill would be appreciated

Greetings!

E-LAB Digital Engineering, Inc. is pleased to make freely available our new
Electronics Internet Resource Directory!

This directory is a collection of many internet sites of use to
electronics builders, designers, and engineers. It is divided into
40 categories, with each category containing many hot-links to companies
and/ or web pages containing information on topics from Compilers to
Code Examples to Components Distributors.

The directory is available at http://www.netins.net/showcase/elab
You WILL want to set a bookmark!

We also invite you to check out our products, such as our new line of
integrated circuits for embedded design.

Thanks,

Todd Peterson

> the changeover to HDTV.
> Gary,

Sorry that I have missed the start of this thread, but the CD situation reminds me of the early SSB vs AM tests on the ham bands years ago. That leads to the question as to how and when we might expect to see CD capability for use in ham radio. SSB is touted as having a theorectical 9 db advantage over conventional double-sideband am, so a 30-db advantage for CD would be outstanding. What are the bandwidth requirements for CD? Are they reasonable for amateur HF operation? Surely must be comparable with that required for am if you were receiving both from a simultaneous transmission.

A few more details would be appreciated if you can find the time.

Hey hey all...here's the situation, short and sweet. I first got
my ticket back in 1980, and I've been silent all those years,
mostlly, although I renewed my (novice) license in 1987.

Now, I've got a Kenwood TS-520SE, and a Heathkit Keyer, the manual
for which has long since vanished into /dev/null (along w/my old
straight key). I can put together a dipole in no time if it
warms up a bit, or i can use the one i hacked togeher that is
sitting on my backyard on 6'tall gardening poles

But, the keyer output is a little RCA plug...and they key input
to the rig is a standard quarter inch jack. What I'd like to know is,
is anyone familiar enough with the keyer (HD-1410) to tell me if I
can just make a connector or are there a few hoops and ladders I need
to jump through to get the 2 pieces of equiptment talking to each other.
I'd like to try and get back on the air while i bone up on my theory
for the upgrade!

I went shopping the other day at my local ShopRite Supermarket. As I walked the aisles, I picked up the many items on my list..cups, toothpaste, laundry soap, milk, etc. As I always do, I wait till I'm just about done to get the perishables. So, after getting everything on my list, I go to the Deli section. After a few minutes wait, my number is called and I ask the deli clerk if he has any pork products on sale. He replies." We've got some really nice domestic ham, $3.99 a pound." Domestic ham??, I ask him. What technologies does it have?? What has it done to advance the state of the art?? He looks at me puzzled and says, "What the hell are you talking about?" I tell him that my pal and friend Carl says it can't be a real ham unless it is technological active, for only those who are technically oriented can be called a true ham. Well, this guy gives me a dirty look and says get lost. At that point I decide, maybe some fresh fish might hit the spot, so off I go to the fish counter. I ask the fishmonger, I would like Code (silent "e") please. He says, I am very sorry, but we No Code (silent "e"). No Code (silent "e")?? Why not?? He explains, how some people didn't like Code (silent "e"), because, according to the no Codder's, people who like Code (silent "e")get a case of flatulence and were very getting old, so they no longer have Code (silent "e"). He suggested I might like some nice red herring, since that's what No Coders seem to always want. He did warn me that while those who like Code (silent"e") were full of gas, those who like red herring were just full of it. I asked, was there any particular red herring he's suggest? And he replied Len's Strawman Red Herring. Hmmm boy is it ever good. According to Len, it's even better flamed broiled. How do you know that, I asked?? The fish guy said, because Len says so and everything Len says is gospel according to Len. But he leaned closer to me and said, "of course, there never seems to be any way to verify what he says.", winking at me slyly. Well, I really wasn't in the mood for Red Herring, so I ask, "do you have any filet of Sohl???" I figured i'd give it a try just for the halibut. Nope, fresh out. So I left.

Well, the moral is

IF IT AIN'T ONE THING, IT"S AN UDDER.

To be continued

I've monitored this 80 m stuff long enough to ask the following
questions:

Why do the operators who are the subject of the malicious QRM
acknowledge it? In the military, it is a big no-no to acknowledge the
presence or effectiveness of jamming over a clear voice link. I'd bet
that if the QSO would continue as if nothing was interefering, the QRM
source would begin to question if he was effective or not and maybe go
on to another freq.

Why don't some of these nets with a close membership come up with a QSY
plan that is distributed via email or USPS mail? I don't believe using
a "chattermark" plan is in violation of the codes and ciphers
restriction in Part 97 since the comms are not "covered" only the
actual freqs. I understand there is a limit on the amount of variation
in freq selection, but higher class tickets can sure take advantage of
a larger playing field.

Please don't flame me as I'll be a new Tech this weekend and just was
wondering if HF is worth the code effort.

DIVISIONAL NEWS

The NSW Division Conference of Clubs was held at the Divisional Office
in Parramatta last weekend. Many interesting issues were discussed. The
minutes of the conference are being prepared and will be circulated to
clubs, and a report on proceedings will appear in a subsequent broadcast.

WIA - NSW DIVISION
CHRISTMAS BARBECUE
TO BE HELD ON SATURDAY 14th DECEMBER
at
59 WESTBROOK AVENUE WAHROONGA
FROM 4.00 PM
ALL MEMBERS OF THE NSW DIVISION AND THEIR FAMILIES
ARE INVITED TO ATTEND.

COST $10.00 per head.

Swimming Facilities available.

All food provided. Please bring your own drinks.
Please advise numbers, with payment, to the office
by 6th December,
so Jo knows how many to cater for.

WANTED (ALIVE): VOLUNTEERS FOR THE BROADCAST ROSTER

We urgently need more people on the broadcast team who are prepared
to be rostered on to do the evening broadcast. At present, we have
seventeen people who are willing to help in the morning, four who will help
either in the morning or the evening, and six who wish to be rostered
evenings only. It does not take many fingers and toes to realize that,
whilst the morning roster means people only need to come here about five
times a year, the evening roster comes round once a month! If you would
like to be trained either as an announcer or as an engineer or both - you
don't have to have a call sign, as there is always one person rostered on
who has a full call, please would you contact Pixie VK2KPC at the office
between 10.30 and 15.30 hours Monday to Friday, or leave a message at
any other time. We will accept people for the morning roster, but we really
need ten or twelve more people for the evening roster, so that everyone
gets a fair go. How about it, folks? Can YOU help?
WILL YOU help?

--Eric Fossey VK2EFY, Divisional Secretary

The 1997 Call Book is now available from the Office. The price is $14.95. Discounted price to members is $13.00. If you want it posted to you, please add a further $2.50 for postage and packing.

WICEN NEWS

Plans are underway to move the WICEN Web page to another host; this will hopefully improve service to all users. It will also be possible to set up several mailing lists for the use of WICEN personnel with Internet access; further details will be announced as they come to fruition. Please note that no change in the Web page address will be necessary, thanks to the wonders of the Domain Name Service and virtual hosting.

We know of no exercises or meetings this month.

The only event next month would appear to be the Lion Island Speedboat Classic, on Sunday 15th December; the organiser for this event is not yet known.

Next year sees the Bridge to Bridge Speedboat Classic on 4th May; the Hawkesbury Emergency Expo, run by Alan VK2YYJ, is over 16th-18th May; the Hawkesbury Classic Paddle is organised as usual by Kevin VK2CKD over 18th-19th October (unfortunately the same weekend as JOTA, but this is not WICEN's fault); and the annual Bungonia Cave Rescue will tentatively be on the weekend following, over 25th-26th October.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Northern Rivers each Tuesday at 8pm around 3610 kHz on odd Tuesdays and the Lismore repeater 6800 on even Tuesdays, Hunter each Wednesday at 7.30pm on the Newcastle repeater 6900, and Central Coast each Thursday at 8.30pm on the Wyong repeater 7125. If there are any other regular nets then we'd like to hear about them.

WICEN (NSW) has an interactive Web page, and the Uniform Resource Locator is: "http://www.nsw.wicen.org.au/". It contains pointers to many emergency-related pages likely to be of interest.
-- Dave Horsfall VK2KFU, WICEN (NSW) Inc. Publicity Officer

MAGAZINE ROUNDUP

Here again is a summary of the local magazines, which in the author's opinion could be of interest to Amateurs. This week we discuss the November issues of the various magazines.

"Electronics Australia" wonders whether Windows 95 is worthwhile; the Pay-TV hybrid fibre/coax (HFC) network is introduced; Australia's participation in the Deep Space Network is explained; the hidden dangers of "RPI" modems are revealed; the role of Max Howden (then) 3BQ in the first two-way Amateur radio link to USA and Great Britain is chronicled (incidentally, we regret the passing of the column's author, Neville Williams VK2XV last week); CMOS circuits are further explored; a simple

active AM antenna is built; measuring mains current waveforms is made safer with a CRO adaptor based on a new Hall-effect sensor; a 24-line interface for ISA-bus computers is constructed; and the 32-channel logic analyser introduced last month is finished.

"Silicon Chip" describes a sophisticated lightning tracking system; a cheap fluorescent inverter, suitable for portable operations, is built; light dimmers are easily repaired; the arguments of AM versus FM arise in radio-control circles; and an extra parallel port is added to a PC, along with the hideous software setups required for those still using "Windows". "Amateur Radio" builds a flea-power 2m FM transmitter suitable for fox-hunting; why counterpoises are required for dipoles close to the ground is explained; a simple pager notch filter is built; the trials of using HF aeronautical mobile are discussed; the ROSE packet network system is described; and several CAD (Computer-Aided Design) packages are compared.

"Radio and Communications" reviews an Australian-designed graphical ionospheric prediction program; both mobile telephone systems are described in some detail; the Australian Band Plan for HF is summarised; receiver designs over the years are compared; the modifications to the AR-3000 scanner are finished; and users of the lower half of 6m are warned of the extra regulations in force.

Be listening next month for another summary of the local magazines.
-- Dave VK2KFU

POWERHOUSE MUSEUM EXHIBIT OF WIRELESS AND COMPUTERS.

The Powerhouse Musuem has a special exhibition of recently acquired items in its 'Collecting Today for Tomorrow' exhibition, open during November and December. Many of these items are not normally on show so it is a rare opportunity to view them.

The objects on exhibit include an original Babbage calculating machine, which was the first true automatic calculator, and a World War 2 German 'Enigma' coding machine.

There is also a number of beautifully presented wireless sets dating from 1925 to the 1940's. These particular collectables are on show at this time due to the efforts of the Curator of Information Technology, Mathew Connell.

The Powerhouse Musijem is open from 10 am to 5 pm each day except Christmas Day. If wishing to see the above items, make sure you advise at the entrance desk that you are there to see the wireless sets and Enigma and you will be directed to them. Ring the Powerhouse on (02) 9217-0111 or their Hotline on (02) 9217-0444 for further information and note that admission on the first Saturday of every month is free.

The Powerhouse is seeking an APPLE 1 (not an Apple 2) computer for Its collection of contemporary simple computers and also an ALTAIR, the first popular US personal computer. If you happen to have one of the above available please contact Colin MacKinnon VK2DYM on business number

(02) 9623 8877 or at home on (02) 9634 6259 or fax to (02) 9894 2646.

VK1 TECHNICAL SYMPOSIUM

The 1996 VK1 Technical Symposium will be held on the 23rd of November 1996 at the Charnwood Scout and Guide Halls, which are located on Tillyard Drive, Charnwood, ACT, near the Charnwood Shops.

Registration will start at 0900 hrs with the proceedings getting underway at 0930 hrs. A set of proceedings, morning and afternoon teas and lunch is included in the admission price.

The day will continue with two streams of speakers until about 1700 hrs. Likely speakers are:

VK4DO Wally Watkins Radio Sports
VK1KCK Mike Walkington An Introduction to Spread Spectrum
VK1ET John Woolner Getting the Most out of Your TNC
VK1PK Peter Parker An Empirical Approach to HF
Homebrewing
VK1RJ Richard Jenkins Working the HF Digital Modes - PACTOR
VK3AVE Peter Hallgarten Using DX Clusters
VK2KWY David Henderson TCP/IP Addressing
VK2DEQ Bruce Carroll Complex Numbers Without Tears
VK2KWY David Henderson An Introduction to Packet Gateways
VK2ALU Lyle Patison Amateur Radio at Microwave Frequencies
VK3ZJF John Day Evolving TCP/IP Protocols for Amateur Packet
VK1KNP Neil Pickford 4800 Baud Packet & Other Modulation Techniques
VK1KCM Carl Makin Integrating a Home LAN into the Amateur Environment

In addition, VK1GI Gilbert Hughes, is proposing to set up an Analogue RF Test station for measuring radio output parameters such a frequency, power, deviation etc. So bring you radio along and have it tested.

But wait, there's more! John Day will be providing a display of some of DAYCOM's more technical books and products.

So, come along on the 23rd of November and join us at the Charnwood Scout Hall for the 1996 VK1 Technical Symposium.

If you need more information, please contact:
VK1KCK Mike on 06 292 0053
VK1KNP Neil on 06 258 7803 or
VK1ET John on 06 254 3140

CLUB NEWS

NEWS ITEM FROM ORANA REGION AMATEUR RADIO CLUB

The Bi-monthly meeting of the Orana Region Amateur Radio Club will be held on Thursday 28th November at 8 PM in the Scout Hall in Talragar St Dubbo.

Telstra was to have given a talk on Fibre Optics but this has been cancelled. This talk is now rescheduled for the meeting to be held on 27th March.
-- Ken Westerman VK2AGW Dunedoo

WAVERLEY AMATEUR RADIO SOCIETY

A number of events are planned for the society over the next few weeks. Our regular monthly meeting is, as usual, on the third Wednesday of the month. It will start at 7:30 on November 20th and the main topic will be a talk by George Georgevits, VK2KGG, on the "Biological Hazards of RF Radiation". So come along and find out how safe it is to operate your handheld or mobile phone.

The first Saturday afternoon of each month is project day, so drop in on December 7th from 1:30 p.m. onwards and get involved in some practical work.

These activities will take place at our club premises in Vickery Avenue, Rose Bay, off New South Head Road, next door to the Rose Bay RSL Club. Members or others interested in amateur radio are invited to come along.

Following last year's successful Christmas dinner, we are holding another this year, also at the Rose Bay RSL. It is to be held on Saturday, December 14th and the cost will be $30 a head. If you would like to come along please advise Simon Buxton by phone on 9391- 9738 or after hours on 9328-7141 to reserve your place.
--Submitted by Simon Buxton, VK2EII, President

MANLY-WARRINGAH RADIO SOCIETY
At last Wednesday's Extraordinary General Meeting, the club members present voted unanimously to grant Life Membership to Phil Angilley VK2BDF. This was awarded in recognition of the immense contribution Phil has made to the club for many, many years. Congratulations, Phil!

This Wednesday's lecture, by Des VK2TGJ, will be on the subject of the Citizen's Radio Emergency Service Team, CREST. Come along and find out how our CB cousins use their hobby to benefit the community. As usual, doors open at around 7:30pm for an 8 pm start.

And a reminder that the club's Christmas dinner has been tentatively scheduled for Friday 29th November. More details will be available in next week's broadcast.

The Manly-Warringah Radio Society meets at 7:30pm every Wednesday evening at the Warringah Volunteer Services Centre, Terrey Hills. The second Wednesday of the month is the club business meeting, and the lecture is on the third Wednesday of the month. As always, visitors are welcome. If you need directions to the club, call in on the club 2m repeater on 146.875 MHz.
--Richard VK2SKY

THE VHF DX GROUP IS AN INFORMAL GROUPING OF ACTIVE VHF
AND UHF OPERATORS. THE GROUP WAS FORMED TO PROMOTE
NON-REPEATER VHF ACTIVITY AND TO ASSIST NEWCOMERS TO
THE BANDS.

VHF DX GROUP MEETINGS ARE HELD EVERY SECOND MONTH AND
CONSIST OF TECHNICAL LECTURES, EQUIPMENT
DEMONSTRATIONS AND WORKSHOPS.

THE NEXT MEETING OF THE GROUP WILL BE NEXT TUESDAY 19
NOVEMBER AT AMATEUR RADIO HOUSE, WIGRAM STREET
PARRAMATTA. KICK OFF TIME IS AFTER 7:30 PM
AT TH IS MEETING WE WILL RE LOOKING AT HOW AN AVERAGR OR
BETTER STATION CAN LISTEN FOR AND EVEN WORK STATIONS OFF
THE MOON DURING THE ARRL EME CONTEST LATER IN NOVEMBER.
TIMES, FREQUENCIES, OPERATING TIPS AND DEMO TAPES WILL BE
AVAILABLE AT THE MEETING.

DON'T FORGET THE TUESDAY ACTIVITY NIGHTS ON 144 MHZ AND
THE GROUP'S SUNDAY MORNING NET ON 146.550 MHZ FM
STARTING AT 11.00 AM.

SUBMITTED ON BEHALF OF RICHARD SOULIE, VK2ARS

The Hornsby And Districts Amateur Radio. Inc.

The next meeting of the Club will be held on Tuesday the 26-11-1996, at
8:00 P.M. it is the monthly meeting followed by a lecture. Where? at the:-
Mt. Colah Community Centre.
Pierre Close.
Mt.Colah.
(Near the Eastern entrance to the Railway Station.)

The Club will be running classes in 1997 for the Amateur Radio Certificate
of Proficiency, commencing early Febuary, with examinations being
conducted at the conclusion of the classes. If you would like to know
more about the classes, give Tony VK2BTL. a phone call on 9487-3383.
If you would like more information on becoming an Amateur Radio
Operator, or the Club in general write to:-
HADARC.Inc.
P.O. Box 362.
Hornsby, 2077.

Or you may also phone the Publicity Officer, John VK2WRT on 9807-2490.

Remember the Club Net on Monday nights on the Club repeater VK2RNS
the frequency 147.250 with a positive offset, ALL ARE WELCOME, we
would like to hear from you or maybe see you at one of our meetings.
-- John VK2WRT, Publicity Officer

TAMWORTH RADIO CLUB HOLDS ITS MEETINGS ON THE FIRST
FRIDAY OF EACH MONTH COMMENCING AT SEVEN THIRTY PM IN
THE SOCCER ROOMS, JEWERY STREET, TAMWORTH. GUESTS ARE
ALWAYS WELCOME AND TEA AND COFFEE IS PROVIDED. THE NEXT

MEETING WILL BE THE CLUB CHRISTMAS PARTY ON SATURDAY
THE 7TH OF DECEMBER AT DAVID AND SHARON'S PLACE.
THE ANNUAL GENERAL MEETING WAS HELD RECENTLY AND THE
FOLLOWING PEOPLE GAINED POSITIONS ON THE COMMITTEE.
DAVID VK2ICY - PRESIDENT
DAVID VK2TDT - VICE PRESIDENT
TERRY VK2KOK - SECRETARY
NEV VK2FNP - TREASURER
PAUL VK2TPR - REPEATER OFFICER
PAUL (no call yet but we'll work an it) - NEWSLETTER EDITOR
SHARON VK2SHA - EXAM CO-ORDINATOR AND PUBLICITY OFFICER

IF ANYONE REQUIRES MORE INFORMATION ON THE CLUB PLEASE
CONTACT DAVID VK2ICY OR SHARON VK2SHA ON 067 622466
DURING WORK HOURS OR 067 691539 AFTER HOURS AND
WEEKENDS.
--Sharon Margery VK2SHA, Publicity Officer

AUSTRALIAN AMATEUR PACKET RADIO ASSOCIATION

AAPRA MEMBERS WILL HAVE RECEIVED THE LATEST COPY OF
DIGIPEAT WHICH HAD SOME INTERESTING TECHNICAL
INFORMATION THIS ISSUE.

WE ARE BUSY PLANNING UPGRADES TO THE SPEED OF THE
NETWORK RESULTS SHOULD SOON BE APPARENT. NEW
ADDITIONS TO THE SOFTWARE DISK LIBRARY INCLUDE WINTNC
1.01E . THIS WILL RUN PACKET IN THE WINDOWS ENVIRONMENT IN
CONJUNCTION WITH A SIMPLE MODEM. FOR INFORMATION ABOUT
THIS AND THE OTHER DISKS IN THE LIBRARY CONTACT AAPRA,

If you would like to submit a news item for inclusion in the weekly
broadcast, please send it to us by one of the following means:
by post to the Divisional Office, PO Box 1066, Parramatta NSW 2124;
by fax to (02) 9633-1525;
by packet radio to BCAST@VK2WI.NSW.AUS.OC, or
by Internet e-mail to wiansw@sydney.dialix.oz.au

Please note that the deadline for news items is 2pm on the Friday
preceding the broadcast; if submitting news items by packet or internet,
please allow for forwarding delays in the network.

If submitting printed copy, please:
submit your news item on A4-size paper;
double space your text;
write on one side of the paper only, and
use a plain font such as "Arial" or "Helvetica", 12-point or larger. This is
especially important if sending your news item by fax.

Please avoid using abbreviations and shorthand, check your spelling,
grammar, and punctuation, and use the exact words you wish the
announcer to say on-air. Remember, the more care you take in preparing
your news item, the better the announcer will read it.

BROADCAST ROSTER

Due to other obligations and the worst case of the flu virus in 23 years, updates to our Ham Radio Online web site have been a little slower than normal this month. But we are still busy adding new stories:
- just added an overview of GPS and GLONASS navigation technologies
- We've republished an excellent article from Richard Perez of Home Power Magazine detailing what happened with lightening blew out radio telephone service and started a forest fire - and the surprising role that ham radio operators played in controlling the fire.
- For history buffs, we're running a story on the importance of Morse Code back in 1871 during the Great Chicago Fire.

And as usual, we have real-time propagation and aurora condition reports, disaster situation reports, equipment info, links to other sites, and so much more.

Ham Radio Online is a self funded, classy online "magazine" devoted to ham radio. Stop on by and enjoy at http://www.hamradio-online.com

We should be back to our regular update schedule very soon.

Amen! I completely agree. If it wasn't for 435, where would they go?
EVERYWHERE! Then the band would be just as bad as.....CB (yes I said
it) :)

435 may be the "dump" machine, but thank god it exists.

996. Re: can someone explain intermodulation?

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-16 00:00:00 UTC
From: Bernie Skoch <BSkoch@postoffice.worldnet.att.net>
Message-ID: <56jr6e$3s0@mtinsc01-mgt.ops.worldnet.att.net>
Source record: 212728

What a lot of people call intermodulation ("intermod") is really cross-modulation.

Intermod happens when two transmitters are in close proximity of each other, and the signal of one (generally because it is so close to the other) gets into the final stages of another, and causes it to transmit. It is "inter-modulating" its nearby neighbor. It sort of sounds like a cat having its tail rocked on. It has nothing to do with your receiver; the transmitter you are tuned to (maybe your favorite repeater which happens to be on the same water tower as the local pager system) is actually transmitting garbage.

Cross-modulation happens in receivers when their front end is swamped by a nearby signal which is transmitting on a frequency to which the receiver is not tuned. It happens a lot on broad-banded receivers (most modern ham handie-talkies--especially the ones that can be tuned to cover public service bands). If you are ever in a metropolitan area and you start hearing page tones or other signals on your HT, you're probably experiencing cross modulation.

The filters you are reading about can be effective against cross-modulation by adding another layer of filtering to your receiver, but they won't help true intermod, since that happens in the transmitter you are tuned to.

73,
Bernie K5XS

998. Closed Repeaters

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-16 00:00:00 UTC
From: scott9@pipeline.com
Message-ID: <56jpm2$rbo@camel4.mindspring.com>
Source record: 212730

This is something that is realling annoying me. CLOSED REPEATER's!
I thought that the bands were supposed to be open to any licenced
amateur who's licence class gives them privilages there. What is this
with closed systems, taking up room on the band, and have extremely
small user bases, no ways for new members, and rarely being used!?!?!

It really ticks me off! Ok if it was used and had a user base of more
than 25-30 people. But repeaters that are rarely used, and that have
user bases as little as 3 or 4, drive me off the wall.

And 440 is hell! Ther are only 10 OPEN 440 repeaters (that I know of)
in So. Cal. (near L.A.). The majority of radios sold are dual banders
with 440 being the second band. What's the use of a 440 radio? There
are no ways to use it, unless you are luck to get "invited" in a
repeater group.

I want to know what you think of this, "closed" frequencies.
Remember, FCC rules state that NO amateur owns a frequency, or pair.
Why should a CLOSED repeater take up two frequencies, and not be used.
The only time a closed repeater should exist, is if it is USED OFTEN
and/or has a user base of AT LEAST 20-30 people!

VANITY UPDATE: SOME FIRST-DAY APPLICATIONS IN LIMBO

The FCC calls them WIPS--"works in process"--applications that need some kind of special handling. But for up to 12% of first-day Gate 2 vanity call sign applicants, WIPS means "no new call sign." It now appears that as many as 550 first-day applications ended up in the WIPS pile, either because the FCC was unable to match one of the applicant's call sign choices or because the application contained "inconsistencies"--some as simple as a date of birth on an application that was missing or failed to match one already in the FCC's database. Other problems included an incorrect call sign on an application, a name change not reported, or putting first and last name in the wrong order. The FCC said this week that it hopes to clear its decks of all first-day vanity WIPS by today (November 15).

There's some encouraging news: An FCC spokeswoman in Gettysburg says that if you're in the WIPS pile for a reason other than "no match," it does not necessarily mean you "missed out" on getting one of your call sign choices. A new call sign already may have been attached to your application. As of November 13, a handful of Gate 2 vanity call sign grants already had dribbled out of the FCC's spigot, bringing the grand total of successful Gate 2 applicants to 3805.

One of them was Lester Johnson--formerly K4PTB and now W4LQ--of Rockingham, North Carolina. "I would like to personally thank everyone connected with the vanity call sign program at HQ," he wrote. "After nearly 40 years as K4PTB I decided to try for one of the 1ï¿½2 calls. Most of the operators in the area kept telling me I was wasting my time and money. But, I suppose I lucked out. I learned this morning that I did indeed get lucky and was issued the old/new call sign W4LQ. It was not my first choice, but I certainly am not complaining." John Warinsky, formerly KD9NO, of Shoreview, Minnesota, reports he got his first pick, K9NJ (he's a New Jersey native).

One who was not so fortunate was Steve Wolf, NO8M, of North Olmsted, Ohio. His first-day Gate 2 application ended up in the WIPS pile, and he has since determined that all of his choices were assigned to other hams. So he's been working up a new list to submit another vanity application and trying to maintain his sense of humor. "If you want help getting over an initial rejection, have your kids look over the list of available calls," he suggests. "I bet you will wonder why you asked for the other

ones."

Those whose applications end up being dismissed because their choices were already taken can take heart that all the "good" (ie, 1ï¿½2) Extra class call signs have not been used up--not by a long shot. As of this week, more than 6000 1ï¿½2 calls in all US districts were still vacant--substantially more than the number of vanity call signs the FCC has issued under Gate 2 to date.

The FCC will mail to all unsuccessful vanity applicants a copy of their application (including FCC processing numbers) and a copy of their check. To request a refund, applicants then must send a letter to the FCC, 1270 Fairfield Rd, Gettysburg PA 17325-7245, along with their taxpayer ID number (Social Security number). The FCC will not apply your first $30 filing fee toward a second application. You must request a refund if you want your money back.

Some FCC gaffes turned up among the Gate 2 vanity call sign assignments. The call sign AT6A was issued to KK6VY in Santa Rosa, California. Unfortunately, the AT prefix belongs to India, not to the US. A California club station got a new call sign bearing an Alaskan AL6 prefix, not permitted in the lower 48. The FCC says it has dealt with these mistakes.

Still not known is just when Gettysburg will process Gate 2 applications that were received after September 23, the opening day for Gate 2. An FCC spokeswoman said this week she had "no idea" when that would happen. Applications from approximately 1400 hams arrived at the FCC in the days following the opening of Gate 2.

Although many hams learned of their new Gate 2 vanity call signs via the Internet within hours after the FCC made the information public, Owen Garner, formerly W1SBM, of Hampden, Connecticut, found out that he was K1AF during a casual ragchew on 160-meter CW. Owen mentioned to the other op, Dave LeDuc, K1EPJ, of Newton, New Hampshire, that he was waiting for his new vanity call sign call. Dave checked the Internet and was able to tell Owen that his new call was K1AF. "So I began the QSO as W1SBM and completed it as K1AF," he reports. The next day, Owen related his experience to Timothy Hutcheson, KT4LY, in Pensacola, Florida, who also was waiting for his new vanity call sign. Timothy checked the Internet and found out he'd been issued K4LY, which he used to complete the QSO.

A footnote: although the FCC did not release the initial day-one grants until Tuesday, November 5, the applications actually were processed--and the licenses dated--on November 4. The FCC spokeswoman said that computer problems on the morning of November 5 prevented the release of the database file until

late that afternoon. The FCC says hard copies of the
November 4 grants were mailed on November 8 and November 12, so new call
sign holders should have their new tickets
soon.

1002. Re: 147.435 in LA to get new call

Newsgroup: rec.radio.amateur.misc

I remember the late 1970s and early 80s in LA when the Mount Wilson and later the famous "Six-One" repeaters were the free entertainment spots. Some of those guys had a bit of style to their shows and were a lot of fun to listen to. The tapes I made ar still popular. Last time I was in LA I listened to the .435 machine and found the majority of the content to be rather sophomoric and boorish at best; disgusting and twisted at worst. It wasn't even marginally amusing! But having an "animal house" repeater to keep all these morons at each other serves to keep them away from the other machines in the area and that in itself is a good reason to have it.

I think you have touched a real nerve there Scott and believe this will lead to an interesting thread.

I tend to agree with you to a point. I cannot think of why any reapeater should be "closed". I would think that your statement that "Remember, FCC rules state that NO amateur owns a frequency, or pair" would mandate that. Any exception to that lets the camels nose into the tent.

There is too much selfishness present in the *hobby* today. Look at the thread about 75 meters, where cliques and nets abound and arguments over who can use what frequencies.

I would like to think I have an open mind (and repeater), so I'd like to hear arguents as to why any particular group should have the right to "own a frequency" which is effectively happens when a closed repeater has a coordinated frequency pair.

Chuck W7LDS
--
Two centuries ago, the celebrated historian Edward Gibbon wrote an epitaph for ancient Athens, one that might also apply to contemporary America:

"In the end, more than they wanted freedom, they wanted security. They wanted a comfortable life; and, in their quest for it all, security, comfort, freedom, they lost it all. When what the Athenians wanted finally was not to give to society but for society to give to them; when the freedom they wished for most was the freedom from responsibility, then Athenians ceased to be free."

1010. Re: can someone explain intermodulation?

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-16 00:00:00 UTC
From: carl@ais.net
Message-ID: <56kov7$q4s@news2.ais.net>
Source record: 212742

In <56jr6e$3s0@mtinsc01-mgt.ops.worldnet.att.net>, Bernie Skoch
<BSkoch@postoffice.worldnet.att.net> writes:
>What a lot of people call intermodulation ("intermod") is really
>cross-modulation.
>
>Intermod happens when two transmitters are in close proximity of each
>other, and the signal of one (generally because it is so close to the
>other) gets into the final stages of another, and causes it to transmit.
>It is "inter-modulating" its nearby neighbor. It sort of sounds like a
>cat having its tail rocked on. It has nothing to do with your receiver;
>the transmitter you are tuned to (maybe your favorite repeater which
>happens to be on the same water tower as the local pager system) is
>actually transmitting garbage.

The above is not really accurate ... intermodulation is a form of
non-linear distortion ... it can happen in a receiver front end that is
oveloaded by stronger signals than it can handle, in the output stage of
an FM repeater, or in the lousy diode connection formed by a rusty can
laying against a chain-link fence ... any nonlinear circuit can act as
a mixer and intemodulation is essentially unwanted mixing ...

In the unwanted mixer two (or more) signals mix to form unwanted signals
at new frequencies (intermodulation products) such as 2F1-F2 and 2F2-f1,
which are "third order products" (2 as in 2F2, plus 1 as in (1)F1) and
are spaced above and below F2 and F1 by the same distance as F1 and F2
are spaced from each other ... 3F2-2F1 and 3F1-2F2 are "fifth order
products" and 4F2-3F1 and 4F1-3F2 are "seventh order products", etc.

There are also multiple transmitter forms of intermod such as (F3+F2)-F1
.. and (F4+F3)-(F2+F1) ... etc. almost any possible mix can occur once
multiple signals meet in a non-linear circuit ...

>Cross-modulation happens in receivers when their front end is swamped by
>a nearby signal which is transmitting on a frequency to which the
>receiver is not tuned. It happens a lot on broad-banded receivers (most
>modern ham handie-talkies--especially the ones that can be tuned to cover
>public service bands). If you are ever in a metropolitan area and you
>start hearing page tones or other signals on your HT, you're probably
>experiencing cross modulation.

The reception of paging tones and other garbled signals described above
is VERY OFTEN caused by intermodulation in the front end of your
receiver ... you're close to the paging tower, for example, and your
receiver is "hearing" signals that are stronger than it can process with
true linearity ... so the RF amp in the receiver front end becomes an
unintended mixer and something like

(2*paging_freq-some_land_mobile_freq=your_2m_rx_freq) is created in the non-linearities of your front end ... that, of course, is the frequency you are tuned to, so your receiver happily amplifies, down-converts, and detects it ...

Another scenario is that the paging signal and other components of the intermod are being mixed in the output of one of the offending transmitters (or some other transmitter that just happens to be active at the time, for that matter) ... the components of the mix are picked up on the antenna of the offending transmitter, go down the coax into the transmitter output stage (which in most FM paging and mobile radio systems is a class C amp, which is highly non-linear), get mixed in that class C output stage to a product frequency that is then amplified and re-radiated as a stronger offending signal ...

If your repeater receiver is being bothered by intermod, look first at your receiver and transmitter, then at neighboring transmitters, then look for rusty cans, etc. lying against the chain-link fence around the building that houses the radio gear ... seriously ...

>The filters you are reading about can be effective against
>cross-modulation by adding another layer of filtering to your receiver,
>but they won't help true intermod, since that happens in the transmitter
>you are tuned to.

As I've stated above ... "true intermod" is often missunderstood, and can happen in ANY non-linear circuit ... adding filters to your receiver will only help if the intermod is happending in your receiver front end and only if the signals are far enough out of band that the filter supresses them to a level that no longer drives the front end into its non-linear region ...

Circulators/isolators (ferrite devices) are often used to prevent transmitter-generated intermods by keeping unwanted signals picked up on the antenna from going down the line into the PA where they can mix, be amplified, and re-radiated ...

Bottom line ... intermod is widely missunderstood ... find someone who REALLY knows what they're talking about, or (better yet) get an authoritative book on the subject and BECOME someone who REALLY knows what they're talking about ... (hams are *supposed* to learn about technical things)

Basically it went away because it was not used much and FCC wanted a
citizens band. IT is the story that may happen to other bands. It is
use it or lose it. Simple!

I can remember doing duplex with 11 meters.

1017. Amateur Bands being taken away!!!!!

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-16 00:00:00 UTC
From: bry@mnsinc.com
Message-ID: <56kvon$4ac@news1.mnsinc.com>
Source record: 212749

Well fellers, I see that it is not JUST in the USA where governments are conspiring to steal our amateur bands amd give them away or sell them at auction.
Here is the latest from the U.K. where the same sort of nonsense is going on.
I don't think the boys are kidding us at ARRL when they say we need to act to protect the amateur bands from these thieves!

Following is forwarded from uk.radio.amateur:
==========
Following Press Release from RA :

http://www.coi.gov.uk/coi/depts/GTI/coi3814c.ok

WITHDRAWAL DATE FOR PART OF THE 10 GHz AMATEUR SERVICE FREQUENCY BAND.

The Radiocommunications Agency announced today the date for the withdrawal of the Amateur Service from part of the present 10 GHz Amateur band.

The Amateur Service currently has a frequency allocation of 10.00 to 10.50 GHz but in order to facilitate the timely introduction of Radio Fixed Access services in the UK, the Amateur frequency allocation of 10.15 to 10.30 GHz will be withdrawn.

Notification of the intention to remove this part of the 10 GHz Amateur band has previously been given to the Radio Society of Great Britain and the purpose of today's announcement is to notify the date of this withdrawal. From the 1st April 1997 the Amateur UK frequency band, 10.15 to 10.30 GHz, will be withdrawn and will no longer be available for use by Radio Amateurs.

With no sign of abatement in the demands on the spectrum for existing and new radio services the Agency continues to balance the need for radio amateurs to have access to spectrum with the demands of existing and new radio services. The Agency continues to explore allocations for Amateur Radio in spectrum that is not in as much demand, an example of this being the recent introduction of the LF allocation for the Amateur Service.

Notes for editors.

1. There are two types of Amateur Radio Licence, the full and the Novice. There are two classes of each type of licence - Class A which permits operation on all available frequency bands and Class B which permits operation only on those bands above 30 MHz.

2. The Amateur Radio Licence contains a schedule which details
the bands that are allocated to the Amateur Radio Service and the
modes of operation that are permitted for each band. The Radio
Society of Great Britain, the national representative organisation
for radio amateurs in the UK, additionally administer a band plan
which operates by "gentleman's agreement".

3. A Gazette Notice will be published in the London, Edinburgh
and Belfast Gazettes varying the Amateur Radio Licence from 1st April
1997.

Folks in Kentucky will tell you that Nathan Stubblefield beat Hertz to it.
I dunno.
Maxwell gets no credit, and Edison got some of his things from other
inventors, though he was undoubtably a clever chap.
Marconi is really the father of radio as we know it, but I believe Tesla and
Stubblefield have both been given short shrift in the annals of conventional
history!

>I bet the folks who make their living in the 550-1750 kHz region
>will be sad to hear that.

They are. They're very sad that their listener base has dwindled as listeners switched to FM for better sound. That's why they are so quickly jumping on the compatible digital bandwagon. That'll go a very long way to restoring parity between MW broadcasting and FM broadcasting in terms of sound quality and coverage. And it does so while requiring far less power.

In the field tests conducted for the FCC last year, a 50 watt CD (compatible digital) signal had superior coverage and far better sound than the 50,000 watt AM station with which it shared the channel. Even though my feelings on digital superiority are well known, I was flabbergasted at how much better CD did than AM, and both on the same channel at the same time with no noticable interference to each other too.

We made videotapes of the spectrum analyzer display in the FCC van as it drove around, and recorded the audio from the AM and CD receivers at the same time. It was astonishing to see multipath and impulse noise eat the AM signal alive, and appear to obliterate the CD signal on the spectrum analyzer, while still hearing perfect audio out of the CD receiver (and total crud out of the AM receiver). CD is going to eat FM's lunch (and spell the end to ordinary AM as well as the new receivers phase in).

Of course the HDTV tests we participated in were amazing too, with the digital signal handily beating the VSB NTSC transmissions while also running much less power. But they weren't nearly as impressive as CD. There's at least a 30 db advantage to CD over AM, and it can coexist with ordinary AM during the phase in period. HDTV can't do that, which is why we're all going to have to move to UHF during the changeover to HDTV.

>The only time a closed repeater should exist, is if it is USED OFTEN
>and/or has a user base of AT LEAST 20-30 people!

This is a can of worms, Scott. It is true that no amateur can claim
the exclusive use of a frequency, says so right in 97.101(b). But
no amateur can be forced to allow another to use his station. That's
what you're doing when you use a repeater, you're using someone
else's station. 97.205(e) says a repeater owner can limit the use
of his station to whomever he chooses. So he owns and controls the
equipment, but he doesn't own the channel.

But this is where it gets sticky, he defacto *does* own and control
the channel via the coordination process. 97.205(c) gives the coordinated
repeater priority on the channel. So repeater coordinators, most of
whom were not elected by nor answerable to the general amateur public,
divvy up the band among a small group of repeater owners, and those folks
defacto own and control the band.

The FCC doesn't have a formal amateur repeater coordination policy, the
various coordination groups operate ad hoc and pretty much make up their
own rules. Many have memberships which are limited to repeater owners,
so they tend to form a closed self-serving group whose main goal is to
protect the status quo. This is the crux of the problem, the coordinators
aren't representative of the interests of the general amateur public, so
they don't set policies which maximize the general amateur public's ability
to utilize the bands that the rules theoretically say belong to all of them.

Now coordination is a good thing, otherwise we'd be back to repeater
range wars, and those who volunteer to serve as coordinators are taking
on a thankless job that needs to be done. Many claim to be fearful of being
sued if they deny a coordination to an aggressive party. So they tend
to use a "first come first served" policy which they believe is defensible
in court rather than tackling the harder task of fairly allocating the
band resources in the amateur public's interest.

The public interest is a key phrase here. In deciding commercial broadcast allocations, the FCC holds comparative hearings to determine which party would best serve the public interest by being granted exclusive use of a channel. These grants are for a limited time, and are subject to challenge at renewal time. There's nothing like that in amateur radio frequency coordination. Perhaps there should be.

If coordinators were elected representatives of the general amateur population of the area they serve, and if they chose to do coordinations in such a manner as to maximize the utility of the frequencies they coordinate to the general amateur public, in a fair and open way, then things might be quite different.

In my personal opinion, someone granted defacto exclusive rights to an amateur frequency pair has a moral obligation to his fellow amateurs to allow them to continue to utilize those frequencies via having access to the repeater. I certainly believe that he is not obligated to allow abuse of his system, and I believe that he has an absolute right to turn the system off at any time he feels it is being abused. But I don't think a members only usage policy is a sound way to utilize a resource (the spectrum) belonging to all.

Thus I operate an "open" repeater system which welcomes any and all amateurs to enjoy the spectrum it occupies, as long as they do so responsibly. Fortunately, that is the way most other trustees in this area feel. They realize that they have been entrusted with a public resource, and that it is up to them to operate in a manner which maximizes public benefit. Unfortunately, that doesn't appear to be true in some other areas.

First, a preface.

Two years ago, Jim Johnson, FCC PRB Director, drafted a letter that
was sent to an attorney in California regarding a civil case that
involved a legal attempt by an organization to keep two amateurs off
their repeater. In this letter (you can get a copy from the ARRL if
you are so inclined) he effectively states that all repeaters
are, by their very definition, 'closed'.

In article <328DD886.439A@execpc.com>,
Chuck Hallett - W7LDS <liahona@execpc.com> replied:

>I tend to agree with you to a point. I cannot think of why any
>reapeater should be "closed".
...
>I would like to think I have an open mind (and repeater), so I'd like to
>hear arguents as to why any particular group should have the right to
>"own a frequency" which is effectively happens when a closed repeater
>has a coordinated frequency pair.

I'll sub-preface this section of my reply by acknowledging that I do,
in fact, own and operate a closed repeater on 440mhz in this area.

I disagree with you that a coordinated frequency pair effectively
gives the trustee a piece of RF real estate. Amateur operators are
free to use either the input or output frequency of the repeater for
simplex communication [although, it is generally considered "bad amateur
practice" to do this]. In this area many amateurs do exactly that,
especially on input frequencies of repeaters that are distant and
generally not being keyed anyway. In the case of my machine, my
attitude is "if I don't hear them, I don't care." So, if someone
25 miles away is on my input frequency holding a simplex conversation,
and it isn't interfering with my machine's operation, I really
don't care.

This is where the delination is between "repeater function" and
"frequency". A repeater trustee cannot deny you access to the
frequency. He/she can deny you access to the repeater function.

My repeater is "closed". However, in the three years that it has been on the air (with about a 5% duty cycle), I have only denied access to the machine to a single individual -- N1JBC, a known jammer in the area who I have personally caught jamming machines. In that instance, I sent a registered letter to both him and his parents (with whom he lived at the time) indicating that under FCC regulations I was denying him access to my repeater.

There are legitimate reasons why an organization may elect to restrict access to a machine. Specifically, repeaters are expensive to set up and maintain. Tower rent, electricity, and other expenses all add up. I do not find it unreasonable to have repeater users contribute funds towards those expenses.

Finally, there may be other, unknown stipulations that force a repeater trustee to restrict access. In my instance, for example, I cannot allow convicted felons access to the machine. Thus, when my machine IDs, once an hour it uses a voice ider that states: "You're listening to felon-free radio, KD1HZ, Providence." Of all the hams I know in the area, there is only one convicted felon (Nazi Skin-Head convicted of painting swasticas on local synagogues - I guess he got an HF ticket to be able to communicate with the Fatherland) that I know of, and he doesn't come on the frequency. If he did, I would tell him to leave, and shut-down the repeater function if it was necessary.

We have several closed, a-la "clique" repeaters in this area. One of them, on 2 meters, is populated by a bunch of guys who we affectionately refer to as the "50K club", because you have to be either a lawyer, doctor, or make over $50K/year to join. They are the "No Lids, No Kids, No Space Cadet" types. Rather than getting ticked, I joined another local club that had a repeater on two meters, and I'm having a blast with a bunch of engineers, public-safety folks, teachers, and so on.

1022. Fixing the antenna connection on an Icom u2AT HT, what I did:

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-16 00:00:00 UTC
From: wa2ise@netcom.com
Message-ID: <wa2iseE0y8u3.G12@netcom.com>
Source record: 212754
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

I've had trouble with the antenna coax connector on my Icom u2AT HT. The connection from the center conductor of the coax connector to the internal circuit board keeps breaking loose. Soldered it before, but it broke again. This time, I made a pair of wire connections shaped like "7"'s from the board to the center conductor. Then I got out the hot melt glue gun and squeezed a glop of hot melt glue around the base of the coax connector to help take some of the stress of antenna wiggling off the wire connections and be absorbed by the hot melt. (I tested the hot melt for RF work by placing a stick of hot melt in the microwave and it didn't get warm or anything when "nuking" it). The "7" pattern of the wire is also done to give some flexability when the antenna does get wiggled. A pair of "7"'s to reduce inductances.

It was a real pain to get under that RF board to solder those loose wire connections to the coax connector. Hopefully, the above will solve this problem of broken antenna connections.

The hot melt appears to have no RF signal impact.

One thing that you must remember--Only the equipment used in the repeater is closed to your access, the frequency is not. You can use that frequency, just not the equipment.

The repeater can be setup using "personal" money, and the owner can restrict access to anyone.

I purtchased a IC-3230H from him via Fed Express. The
radio
had no RF output on UHF. When I opened the case to see if anything
was possibly disconnected...a capacitor fell out of the case and I
could smell the odor of burnt transistor smoke.
Of course he dinies any of this and upon confronting him via
email he said this and I quote,
>>Let me know what it costs for the repair
>>and we'll see if we can work something out. Again I'm sorry this happened.
>>
>>73 de
>>Pete
>>kc4wwu

BTW here is what he said originally:

>I have for sale an ICOM 3230H dualband
>>It is in Great Condition
>>Comes with all original accessories
>>Also comes with Speech Unit &
>>DTMF / PL Decode Unit
>>
>>Asking $350.00 plus shipping obo

Anyway...he can now say what he wants in response to this but
the facts are that the radio was not operating properly and I had to
spend several hundred dollars for ICOM to repair it.
The money is spent and I now have a great radio....so I have
the last laugh.

The European Microwave Newsletter is a free newsletter dedicated to amateur radio operations on bands above 1 GHz.

EMN is published approximately 6 times a year and carries news, letters, technical and operating information, and much more!

The EMN is published on the internet in two forms:

1. By email subscription

2. Downloaded from the EMN website

To subscribe to the EMN simply send an email to: emn@pacsat.demon.co.uk and include the word SUBSCRIBE in the text. I will do the rest!

To download a copy from the website, point your browser to the following URL: www.pacsat.demon.co.uk and follow the links to the EMN.

Don't forget the newsletter is free and all I ask in return is that you send me a regular report on your microwave activities - wherever you are and whatever microwaving you do, be it narrowband, wideband or other specialised modes such as ATV.

73 for now

I beg to differ (and so does the FCC).

My repeater is my equipment. I determine who does and doesn't have
access to it. Just as I determine who does and does not have access
to my HF shack.

I might not own the frequency, but I certainly own the equipment, and
can deny you access to it any time I want.

> Thanks..

When your in the 2 meter frequentie, press Functie Low-Hi (power) to go back it's the same way
You also use the same method to go up in the 70 cm to 800 - 999

Good luck for it and enjoy you TH-79 like i do
Wait for the new mobile dual-bander from Kenwood, i tested it last weekend and what i have seen is almost impossible on any other mobile tranceiver.

DOT display with both frequenties AND station name AND spectrum on the same display on the same time !!

Hi Michael, Seems if he is denied use of the equipment on that
frequency, he has a right to use his own equipment on that
frequency since you don't own the frequency. Would you agree?

WRONG WRONG AND MORE WRONG THESE FOLKS JUST ARE NOT LISTENING blah blah
blah.

You see, I too can shout and argue by assertion. At least Mr. Iezzi was
polite and reasonable in his presentation, bolstering his argument with
his observations and history.

Presumably, you are a no-coder (I could not find your call-sign in your
post, so I cannot verify this). You do your side a disservice by
screaming and bragging.

If you are as committed to the hobby as you imply (given your brag about
being a repeater controller/owner), a little 5WPM code test would be no
obstacle.

I guess you are for the mandatory use of voice synthesiser repeater
ID'ers, given that you (presumably) cannot understand the Morse.

[1005]
C L O S E D C I R C U I T A D V I S O R Y

Newsline report number 1005 for release on Friday, November 15, 1996 to follow.

(*****
The following is a QST

Hams may have to ante up to protect our service, several jammers head to jail and the alleged killer of a hams family is jailed in Boston. These stories and more on an extended Newsline report number 1005 coming your way right now.

(*****
RISING COST OF HAM RADIO

The cost of protecting ham radio is increasing worldwide. As reported two weeks ago, the American Radio Relay League has announced a three dollar dues increase effective next July the 1st. The League says that the move to raise dues is related to a discouraging financial report. During 1996, expenses outpaced income by approximately a half million dollars. The League says that the dues increase is part of a multi faceted effort to improve the League's financial picture in future years without affecting essential services.

And the ARRL is not alone. The Radio Society of Great Britain has released its financial report for the year ending on June 30th. The RSGB says that it suffered almost a quarter of a million dollar operating loss. This is the first time that the RSGB has shown an operating loss since 1971. The organization says that the deficit is mainly the result of a heavy commitment made to the protecting the future of Amateur Radio.

And what does this mean for hams worldwide? Simply that all are going to have to pay more in dues and donate more to their national societies to keep the Amateur Radio service vital and alive.

(*****
POLICE JAMMER GOES TO JAIL

A ham who jammed police communications is now sitting behind prison bars. Bobby Lee Aguero, KE6VNU, who called himself "The Phantom" while interfering with police communications, was sentenced to jail for 120 days

and fined over $1400 by a Placer County California Municipal Court on Friday, November 1st.

Aguero is a Sacramento area radio amateur who admitted in a plea bargain to having interfered with Roseville, California Police communications. He also allegedly interfered with police communication at a ham radio convention in Seaside, Oregon on June 2nd.

In the California plea bargain agreement, Aguero pleaded guilty to three misdemeanor counts of the Placer County Penal Code on August 26th. These included interfering with communications, delaying a police officer, and destroying evidence.

In sentencing Aguero, the judge considered the Parole Department concerns that Aguero showed little or no remorse regarding his offenses. The judge denied a defense request for electronic ankle bracelet monitoring of the defendant citing the Aguero's ability to utilize and alter electronic equipment. And despite a defense counsel request, the judge ordered that the time served be immediate and continuous. He also denied Friday through Sunday jail time in spite of the defendants current school schedule.

Aguero was also ordered to continue rehabilitation by the probation department This means he prohibited from owning a radio transmitter or scanner or having one in his presence. He is also prohibited from being within fifty feet of any radio capable of transmitting signals. Failure to comply with the probationary terms would subject Aguero to an additional year in jail.

Local hams familiar with the case were present at the sentencing. Some had presented the presiding judge with background information regarding the defendants behavior in the Amateur Radio community. One ham, a former prosecuting attorney, actually submitted a letter to the judge. It reportedly detailed Aguero's attitude and activity exhibited on the local VHF amateur frequencies. Observers say that Aguero left the courtroom with a grimace and in tears to began his 68 days in jail.

Aguero's sentence of 120 days in county jail was reduced by 52 days by time served.

(*****
JAIL FOR FLORIDA PHONE RESCUE CALLER

A Florida man is on his way to prison after putting the crew of a Coast Guard cutter in jeopardy as the result of a phony high seas rescue callout.

A fifty seven year old Sarasota man, Peter Zuwicki is going to spend eighteen months in federal prison after his conviction for making false distress calls to the United States Coast Guard at Sarasota, Florida. Zuwicki's crime of making six false distress calls to the coast guard between January 7th and February 4th 1996.

The judge increased Czechs' sentence due to the risk of serious injury he recklessly created by causing a 41 foot U.S. Coast Guard rescue boat to race at flank speed, 20 knots, to the location of a vessel in distress that had presumably sunk in Sarasota Bay on Florida's Gulf Coast. In fact, no vessel was in distress. Petty Officer Second Class Catherine Gross testified at the sentencing hearing that she navigated by radar while transiting the intercostal water ways in extremely heavy fog to reach the vessel she believed had sunk with two adults and four children aboard.

As far as we can tell, Zuwicki does not hold a ham radio license.

(*****
FOUND GUILTY

Two men have been found guilty of felony theft in Johnson County, Kansas thanks to the help of a ham radio operator. The two were arrested late in 1995 after Zac Cartright, KB0GMC spotted a man haphazardly handling what looked to be new and expensive computer equipment just outside of a CompUSA store while another man was seated inside of the pick-up truck. When Zac noticed that the truck had no license plate, he decided to follow the truck as it headed to another parking lot nearby. There, the driver got out and re-attached the license plate. At this point Cartright decided to use his mobile rig to notify the police.

With the help of Beryl Masters WB0EJJ the Overland Park Police were called out. They arrived within minutes and took the two into custody. Later, CompUSA confirmed that the equipment had been stolen from them. It took almost a year before the case came to trial, but based on the testimony of KB0GMC the two men have now been convicted.

(*****
SUSPECT ARRESTED IN HAM FAMILY MURDER

The alleged killer of the family of ham radio operators family is in custody thanks to a television show.

Alan Eugene White, 26, KA0QNB was arrested Saturday night November 9th in Boston within minutes of his picture being broadcast on the America's Most Wanted television show. He was picked up at a homeless shelter by Boston police acting on a tip from someone who saw the show.

White was wanted for the July triple murder in Salina, Kansas of Silent Key Jim McKim, W0CY's widow, his daughter and a five year old great grandchild. Police say White will be brought back to Kansas to be charged in the triple murder.

White holds a Novice class license which he obtained in December 1992. He and the late W0CY were both members of the same Amateur Radio club in Salina.

Former Fox programming executive John Matoian did not renew America's Most Wanted for the 1996-97 season due to low ratings. Fox brought the show back, mainly as a public service after it received thousands of letters from law enforcement personnel praising it for taking hundreds of wanted

criminals off the streets.

(*****
MITNICK SENTENCING DATE

A federal judge has set January 21st as the sentencing date for computer hacker Kevin David Mitnick, N6NHG on two counts of cellular telephone fraud and probation violation. The November 4th announcement by U.S. District Court Judge Mariana Pfaelzer also delays setting a trial date in a new case against Mitnick and a associate until after a December 9th status consultation.

Mitnick is named in a twenty five count indictment that alleges he took proprietary software from several hightech manufacturers, damaged computers at the University of Southern California and pilfered and then used computer passwords. This, during a two year cross country hacking spree. The indictment also charges Mitnick and one other defendant with using illegally obtained cellular telephone numbers to make their computer hacking calls untraceable.

As previously reported, Mitnick was arrested in February of 1995 in Raleigh North Carolina after being tracked down by a San Diego computer security consultant. He pleaded earlier this year to the cellular phone fraud and probation violation charges. If found guilty on all twenty five new charges, N6NHG could wind up spending the rest of his life behind prison bars.

(*****
OKLAHOMA V.S. SPOC

The papers have not even been signed between the ARRL and National Frequency Coordinators Council, and already one of the nations coordinators is complaining. ORSI, the Repeater Coordination Council serving Oklahoma says it wants no part of a single point of contact at this time.

According to information supplied to Tom Blackwell, N5GAR by ORSI and passed to Newsline, the council has recently had a change in board members and management. The message received by N5GAR says that the Oklahoma group has notified the FCC that its membership was not consulted prior to the old board giving its support to the single point of contact.

Because of this, the ORSI is withdrawing any support previously given to the proposal. This, until such time that the appropriate study is done. After that, the membership will be informed about the pros and cons of the proposal and then polled to see what the groups position will be.

(*****
MORE ON LEOS V.S. HAM RADIO

If other countries are working on sharing studies to permit Little LEO satellite to share the 2 meter and 70 centimeter ham bands, nobody outside those administrations knows about it. The proposals, if any, were expected to surface at a meeting of International Telecommunication Union Working

Party 8D from October 29 to November 8 in Geneva, Switzerland.

ARRL Technical Relations Manager Paul Rinaldo, W4RI, and ARRL International Affairs Vice President Larry Price, W4RA, attended the session. Rinaldo is a member of the U.S. delegation and Price represented the International Amateur Radio Union. The U.S. provided no input to the meeting to suggest possible sharing between Little LEOs and amateurs. The output of the Working Party goes to the Conference Preparatory Meeting in May of 1997. The report will provide the technical basis for WRC-97 decisions on the issue.

Meantime, companies involved in the launch and operation of the Little Leo satellite constellations are moving ahead with their plans. Satellite Communications Magazine reports in its November issue that Iridium LLC has completed negotiating a 750 million dollar credit package. The Motorola led venture will orbit sixty six satellites in low earth orbit for global access to mobile telephone technology. This latest credit arrangement brings this one companies' war chest up to 2.65 billion dollars in instantly available funds.

(*****
NEWSLINE SUPPORT FUND

Now, here is the Newsline Support Fund Administrator, Andy Jarema, N6TCQ:

This week's report starts with Ken & Lyn Parrish, KC5SOK and KC5VTA of Buda, TX, Russel Lamb, WN8H of Harlingen, Jay Godwin, KB5LET and the Austin Repeater Organization of Austin. Moving north, we heard from the Lincoln, NE ARC, the Red River Radio Amateurs of Fargo ND, and Larry East, W1HUE, of either Idaho Falls, ID, or Toronto, KS, we couldn't tell, Larry, so whump, there it is....

We heard from the Pikes Peak FM Association in CO, Wallace Willhard, W7MVK of Bountiful UT, and the Las Vegas Radio Amateur Club. From Arizona, we heard from regular contributor Colonel John Bash, KG7HL of Tucson, Fred Krick, AA7XE of Bullhead City, the Cochise Amateur Radio Association, and the West Valley ARC of Sun City.

Moving to the Northwest, we heard from the Sno-King Repeater Group of Seattle, and a big thank you to the Puget Sound Repeater Group. And from way up the coast, we heard from the Anchorage Amateur Radio Club.

Remember that clubs that support us with the club name, repeater call, and service area, get a mention during the newscast ID break.

(*****
REVISED NEWSLINE RELEASE SCHEDULE

And while on the subject of Newsline itself, we have a short announcement about the release schedule of these newscasts. As a result of requests from individual amateurs and nets on the European continent, we are going to stagger the release of Newsline on our two Los Angeles

telephones. The newscast will continue to be released just past midnight Eastern time on Friday morning over our (805) 296-2407 line, but our (818) 313-9997 line will now update on Saturday. This will give hams in the various European time zones the chance to get the previous weeks newscast on a less crowded line.

(*****
U.K. YHOTY

From overseas, word that this year's Radio Society of Great Britain's Young Amateur of the Year is 14 year old Christopher Davies, M0AAU, from Shrewsbury, England. The runner-up is Ben Clarkson, G7WHO, who's also 14 years old and from Reading. Christopher and Ben received their awards and prizes at a ceremony at the recent RSGB International High Frequency and Islands On The Air Convention.

(*****
SALEM OREGON TOWER LAW

An Oregon Society of Broadcast Engineers Newsletter says that the City of Eugene, Oregon has voted in a moratorium on accepting applications for towers and antennas but hams are excluded for the moment. In the September 16th action, the city feels it was going to be inundated with applications for conditional use permits for new tower construction. They even admit in the new ordinance that 15 new applications had been received as of September 16. As such, the city says that it has the right to declares an emergency and shuts down the permit office for tower and antenna applications.

Broadcast station KMGE quickly mobilized the broadcasters into action and several hams led the fight to the Council Chamber. Instrumental to the exclusion of amateur antennas and structures was Kenton Sturdevant N7IXA. Broadcasters were exempted to the extent that would be needed to implement the new EAS within the next six months.

(*****
TARA RTTY SPRINT '96

The TARA RTTY Sprint '96, is coming up this December. This sprint is a perfect opportunity for hams to sharpen their contesting skills for the ARRL RTTY Roundup in January. Complete rules are available at:

http://generators.com/tara/rtty.html

(*****
DX

In DX, F6HWU will be active as FH/F6HWU from Mayotte through November 27th. Denise will be operating mostly CW on all bands, and there may be some activity on RTTY.

Also, FR5ZU/T on Tromelin Island has been heard on 15 meters at around 15:45 UTC. The length of stay is unknown. QSL direct.

(*****
HAPPY BIRTHDAY WALTER

Some names in the news. Former CBS Evening News anchor Walter Cronkite celebrated his 80th birthday November 4th. Cronkite holds a Novice class ticket and the call sign KB2GSD.

(*****
ATWATER KENT TIME CAPSULE OPENED

Some vintage radio collectors in the Philadelphia area got a treat on Friday October 25th. This, when Mr. A. Atwater Kent III -- the grandson of the famous radio manufacturer of the 1920s and 1930s -- opened a time capsule that had been sealed and buried at the Atwater Kent factory in Philadelphia in 1929 by his father and grandfather.

Using a huge soldering iron, Ralph Williams, Atwater Kent collector and historian and Kent family friend, undid the soldered seals from the copper box after it was removed from the granite cornerstone. Inside were newspapers of the era plus notes from the senior Kent's speech at the dedication.

But the real "prize" was an Atwater Kent Model 55 radio chassis and instruction manual, still in mint condition, in the bottom of the time capsule. The Model 55 -- a weighty, top-of-the-line set -- was installed in a number of different cabinet configurations in its day. The Model 55 used 10 Cunningham "globe" tubes and a separate speaker.

The General Services Administration now owns the old factory, which is being razed to make way for a new building. The contents of the time capsule will initially be displayed in a new structure nearby, housing the Department of Veterans Affairs. Later, the artifacts are to be loaned to the Atwater Kent Museum.

Several members of the New Jersey Antique Radio Club attended the historical event.

(*****
ART BELL GETS AFFILIATE 300

Congratulations to late night talk show host Art Bell, W6OBB on the addition of his 300th affiliate station. On Monday, November the 4th, Art picked up one of the nations best known broadcast outlets when Chicago's WLS put him on the air in the windy city.

For those of you who have not yet tuned in, Art Bell is the host of the satellite distributed overnight talk radio program called Coast to Coast AM and the weekend show Dreamland. The programs actually originate from Art's in house studio not far from Las Vegas, Nevada in the town of Pahrump. They are distributed through the satellite facilities of the Chancellor Broadcasting Company.

Both programs are carried on radio stations throughout the United States and Canada as well as live on the Internet with Real Audio. If you want to find out the call letters of the station in your area that carries Coast to

Coast AM or the URL of the Real Audio server, visit Art's home page on the world wide web. The URL is easy to remember. Its':

http://www.artbell.com

Then click on the affiliates list and you are there.

And after the show you might want to take a listen on 3.885 MHZ lower sideband. It's not uncommon to find W6OBB chatting with ham radio friends who have stayed with him all night.

(*****
And for this week, that's all from the Amateur Radio Newsline. You can write to us at:

Yes, you are right. But having a closed repeater means that you are
"taking" those frequencies away from everyone else. I'm not saying
that you should be forced to let people use your equiptment or
repeater, but if someone wants to use the frequency it should be
available.

Well you can deny use of you repeater but if I wanted to have a chat
with someone on your output or input freq then I can legally do it.
Remember just because you own the equipment doesn't mean I can't use
the frequencies too. I detest closed repeater systems (by closed I
mean the ones that you have to have special access to use). We have
two repeaters that belong to a club that I am a member of and they are
open repeaters and will always remain that way. Closed repeaters are
not in the amateur spirit in my book.

Well it's Nov 17th and I haven't seen my call in the database yet.
The FCC told me that my application had a very minor problem (they
entered the birth date incorrectly) and that I probably got my first
choice, but still I hear nada. Anyone else in the WIPS category
received a call yet?

Notes
=====

The distances were calculated using the International Ellipsoid of
1924 (polar radius 6356.912 km, equatorial radius 6378.388 km). Details
of the calculation method are available on request.

Propagation modes are those reported by the stations concerned.
However, it can sometimes be very difficult to distinguish between
propagation modes. This is especially so on 50 MHz, where mixed-mode
QSOs are common, and to a lesser extent it applies on 144 MHz. The
propagation information should be read with this in mind.

Station positions were taken from the best available information,
in the following order of preference:

1. Exact latitude and longitude where known
2. Locator sub-square center if given
3. Approximate latitude and longitude from geographical location.
4. Distance as claimed by the QSO participants.

Calculated distances may change if better information on station
location becomes available.

If you have any information on a possible record or exceptionally long
distance QSO please send it to the IARU Region 1 VHF/UHF/Microwave DX
record co-ordinator:

John Morris, GM4ANB,
35 Main Street, Hillend, By Dunfermline, Fife, KY11 5ND, UK.

Or via packet: GM4ANB@GB7EDN.#77.GBR.EU
Or via e-mail: john@kirsta.demon.co.uk

An on-line copy of the latest version of the table is at:

Even though I am 100% against Closed repeaters, one thing is certain.
NO AMATEUR can LEGALLY transmit on the output or input of a repeater,
while it is in use, so that is causes interferance to the repeater
operation. We CAN use the freq's when the repeater is NOT in use.

Correct me if I am wrong. Still, I DO think that closed repeaters
are, like KC7GNM said, not in the amateur spirit.

I would like to know, why the ARRL and/or FCC doesn't do anything about 2 meter repeater jammers. It is hard for me to have a QSO with a friend, without being jammed out. Is it just me, or is 2 meters becoming the CB (excuse the term) of the Amateur Bands?

I haven't tried HF yet, as you may know I am looking for a 10 meter rig. (If you have one under $175 let me know), I sure hope HF isn't as bad.

Cecil,

In a rather simplistic way, you're correct. But as Mike had stated
earlier it would be considered bad amateur practice. I think Part 97
is pretty clear on the whole thing.

And in Mike's case I don't really consider his repeater closed in the
true sense of the word. It is available for use by club members and
those invited by club members.

reputation, even if the threat to it was from someone who obviously
lacked any understanding about the ethical rules Chris was mentioning.
As for the threat of legal action..."if you don't want to run with the
big dawgs, stay on the porch."

BTW, if you want to "tweak" someone, please do it to someone other than
those trying so hard to defend our favorite radio service from those who
would like to end it.

SB DX @ WW $OPDX.279
Ohio/Penn DX Bulletin No. 279

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 279
BID: $OPDX.279
November 18, 1996
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, AD1C, WA1YTW, KA2CYN, W4ZV, N5AW, W5ZPA, KH6BZF, K7WX, NL7TB, K8YSE, WA0RJY, DF4RD, DL2HBX, DL3KUD, G4BUE & DX News Sheet, JA1IDY, JF1SQC, LU6EF, OH7KD, VR2GO and ZS5S for the following DX information.

3C, EQUATORIAL GUINEA. Marv, N5AW, and Phil, N6ZZ, have licenses in hand for an operation from Bioco Island, Equatorial Guinea. Their callsigns will be 3C5A for Marv and 3C5Z for Phil. They will have two transceivers, an amplifier, a tribander and dipoles. They also plan to operate 3C5Z in the CQWW CW Contest as a Multi/Single entry. Also, they plan to operate the WARC bands outside of the contest, possibly with two stations. Both of them prefer CW but will try to spend a little time on SSB. Sorry, there will be no RTTY or packet. Phil arrives in 3C-land November 17th and departs December 1st. Marv arrives November 20th and departs the 28th. QSLs for both stations go via N6ZZ.

3V, TUNISIA. Uli, DL2HBX, states he is heading here for his first real pile-ups on Wednesday, November 20th. He reports that on Thursday and Friday he will most likely be spending time to get to know the people at 3V8BB and to do some antenna work. He states, "I hope there will be some time left over to become familiar with pile-ups before the BIG ONE starts..." During the CQ WW DX Contest you can find him around .033 kHz ("BCC frequencies") at least on the high bands. He will have to see if this is suitable for the low bands as well. NOTE! **** Every QSO will be confirmed via the BURO! **** If you can't wait, direct submissions should go to his home address: Ulrich Ann, Marienstr. 20a, D-38104 Braunschweig, Germany. Sufficient return postage for overseas airmail currently is either 2 US green stamps or 1 (one!) IRC. However, he asks for some patience as he plans to have color photo cards printed.

5X, UGANDA (UPDATE). 5X4DLI (Dave, KE4EW) and 5X4DEL (Dale, N3BNA) are now active from northwest Uganda, from the station of 5X4F (Paul). QSL 5X4DLI via KE4EW, 5X4DEL via WB3DNA and 5X4F via K3SW. They will join

in a Multi/Single entry (using battery power) in the CQWW-CW Contest as 5X4F. Look for them 37 kHz from the bottom of the bands when possible.

C21, NAURA. JUST A REMINDER! Begin looking for the C21BH team to be active November 20-27th (activity also during the CQWW CW Contest) to celebrate Martti Laine's 50th birthday. Suggested frequencies:
CW - 1828, 3503/23, 7003/23, 10108, 14003/23, 18083, 21003/23, 24903 and 28003/23 kHz
SSB - 3792, 7085, 14215, 18115, 21255, 24945, 28475 kHz
RTTY - 10130, 14082, 18100 and 21082 kHz

During the CQ WW CW Contest they will move to the lower end of the bands if they can't keep their prefered frequencies. Do remember that one station will remain on SSB during the contest! ADDED NOTE: OPDX InterNet Subscribers will receive an added bulletin containing an update provided by Mats, SM7PKK. ADDED UPDATE: Just before going to print, OPDX was told Hillar Raamat, N6HR, has been added to the list of operators of: DU3YL, DU9RG, KJ4VH, K8YSE, JA1BK, JP1NWZ, OH1RY, OH2BC, OH2BE, OH2BH and SM7PKK.

CU, AZORES. Matt, DL3KUD, will once again be active from "these beautiful islands" as he calls them. His activity will begin between the December 30th and January 12th (1997) as CU8/DL3KUD from Flores Island (IOTA EU-089). He will sign CU2/DL3KUD from Sao Miguel Island (IOTA EU-003) from the Jaunary 13-19th. Operations will be in CW only and on all HF-Bands between 160 and 10 meters. He will use a 100W-TRX, R7, and dipoles for 160 and 80 meters. He may use a small Power Amplifier, too. QSLs will be answered 100% via bureau. If possible, don't send any QSLs direct please.

HC, EDUADOR. Look for Bernd, DL1VJ, to be active in the upcoming CQWW CW Contest as HC1OT. Activity will be on all bands.

HC8, GALAPAGOS ISLANDS. Trey, N5KO (ex-WN4KKN), will be active as HC8N on all bands in the CQWW CW, and will be active as N5KO/HC8 before and after the contest. QSL via AA5BT.

HS, THAILAND. Jack, WA0RJY; Sam, HS0/SM3DYU; LA7JO along with several others will be mounting a Multi/Single effort with the callsign HS0AC during the CQWW CW Contest weekend. They have received special permission to operate on 80 and 160 meters, and they will be working on receiving antennas for those bands during the week prior to the contest. Listen for them on the low bands! Jack told OPDX that he will be operating prior to the contest (and possibly after) as HS0/WA0RJY.

JW, SVALBARD. The "DX News Sheet" reports that Mathias, JW5NM, is very active on 160 meters (1820-1825 kHz). He hears JAs between 2105-2125z and the USA West Coast and KH6 at 0630z. He will be QRT November 15-21th and December 1-15th, but plans to be active for the CQWW CW Contest. QSL via LA5NM.

KH0, MARIANA ISLANDS. Sei, KH0DQ/JF1SQC, informs OPDX that he and NH2C/JI3ERV, AL7NC/JK3GAD and WI3O/JR7OMD will operate as KH0DQ from

Saipan (IOTA OC-086) in next CQWW CW Contest as a Multi/Single entry. Their Sunrise/Sunset is 2023z/0744z. QSL via JF1SQC.

LX, LUXEMBOURG. Look for LX4B during the CQWW CW Contest as an 80 meters single band entry. QSL via LX1TI. Meanwhile, look for LX/DF0BK in the contest as a Multi-Op/Single entry. Activity will be on 160-10 meters. QSL via DL8SCG.

OI, FINLAND. The SRAL has authorized OH7AAC to use callsign OI7T during both 1996 CQWW SSB/CW Contest. So look for OH7AAC to use the callsign OI7T in the upcoming CW contest as a Multi/Single entry. QSL via OH7AAC.

PZ, SURINAME (also possibly FY, French Guiana). Mako, JA1OEM, will be active most days in Surinam on CW. His callsign was not mentioned. Suggested frequencies:
80m - 3501, 3508, 3790/3793-3805 20m - 14001, 14130
40m - 7001, 7008, 7045, 7085 17m - 18101, 18115
30m - 10101 15m - 21001, 21185

If possible, he will go to French Guiana (FY) for a week during his stay in PZ-land and he hopes to be active on CW with activity on 3.5/3.8 and 7 MHz. His length of stay was not mentioned, but Mako will not join the CQWW CW Contest activity and will be on SSB during the contest on November 23-24th. Mako has been active from 5 continents (AS, OC, EU, NA and AF). This DXpedition is his 6th and last continent. Mako is 70 years old! QSL to JA1OEM.

QSL NEWS AND INFORMATION.....
LU6Z QSL (SOUTH ORKNEY). Raul, LU6EF, states, "We are happy to say that we cleared all direct requests for LU6Z - South Orkney 1995/1996 QSLs. Last big batch of cards were sent during the first week of October, so all of you should have LU6Z QSLs in your hands by now. If it is not your situation, please send a new request to us, and please send only cards to P.O. Box 9, 1875 Wilde, BA., Argentina. Also, PLEASE DO NOT SEND GREEN STAMPS, SEND ONLY IRCs. We are still working with bureau QSLs. If you still need cards from past GACW operations, please let us know. We manage cards for: LU7X - L8D/X - LU3ZI - LU2ZC - LU6UO/Z - and LU5EVB/Z. Again, we are sorry to say that we can not answer all E-mail requests by the same way, although we are taking them for our records... Best Regards. Raul M. Diaz, LU6EF GACW QSL Manager".

T9/WA5IKQ, Bosnia-Herzagovina. The first shipment of Dave's logs have arrived at his QSL Manager's QTH. Dave's QSLs have been printed and received. The first wave of incoming QSLs to his manager have been replied. QSL via KH6BZF, CBA Callbook instructions, i.e. SAE+IRCs or SASE.

WHERE TO QSL FOR 9Q5PA! Thanks to Scott, WA1YTW, who had a QSO with Frank, 9Q5PA, on RTTY this past week, the question as been answered. Per Frank: QSL direct to Frank Patris, 9Q5PA, C/O American Embassy Kinshasaa Unit 31550, APO AE 09828, United States of America. You

must QSL direct, there is NO QSL bureau in Zaire. All QSLs received directly are answered prompty and directly by U.S. or International mail. SASE OR green stamp is appreciated. Meanwhile, Dave, KA2CYN, states he has received a QSL several days ago for a contact that took place late October using the same address.

USI ALERT (United States Island award program). Jim, KA3UNQ, will be roving Rhode Island's islands from now until November 19th. Look for him to be on from RI-06, 07, 03 and 05 (all NA-31) on 14260 or 7260 kHz +/- QRM (probably around 1700/1800z). QSL via bureau or direct with SASE.

V3, BELIZE. The following group will be active from Ambergris Caye, Belize, from December 11-16th: Mike, W5ZPA (V31MP); Stan, W5JYK (V31YK) and Wondy, K5KR (call pending). Activity will be on CW, SSB, and RTTY. QSL to each home call with SASE.

V85, BRUNEI. Hajime, JO1RUR, will operate as V85HG in the upcoming CQWW CW Contest as a Single Op/All Band entry. QSL via BURO to JH7FQK.

VS96/VR96, HONG KONG (VS6/VR2). Tom, VR2GO (now signing VR96GO), states these prefixes will also change to VS97 and VR97 on 1/JAN/97 and to VR98 on 1/JAN/98. All this is in observence of the handover of Hong Kong to Mainland China.

XZ1N (MYANMAR) NOW ACTIVE. Warren, K7WX (ex-KF7AY), states in a news release that ..... "Construction of the four stations began on Saturday, November 16th, and all should be fully operational by the time of the first North American opening on Sunday, November 17th. Zones 3, 4 and 5 should look for us on 40 and 30-meters around their local sunrise. We will have monoband antennas and all the necessary firepower.
Daily updates to the XZ1N web site will be handled by N7RK. We will list useful propagation information for zones 24, 15, 14, 5, 4 and 3, as well as other observations regarding long path possibilities. We will also list the call signs of very strong stations and some of the better operators we encounter. Look for your call sign!! From all of us on the XZ1N DXpedition team, good DX and CU in the pile-ups! 73 de Warren/K7WX"
ADDED NOTE: OPDX InterNet Subscribers will receive an added bulletin containing the last press release provided by Dave, N7RK.

-=-=-=

the Sysop or send InterNet Mail to one of the two following addresses:
kb8nw@barf80.nshore.org -or- aq474@cleveland.freenet.edu
- OR - Send a message via packet to KB8NW @ WA8BXN.OH.USA.NA
- OR - Use the VOICE or FAX answering machine at 216-237-8208 which
shares the same phone line as BARF-80 BBS using a data/fax/phone switch.
To access: 1) Dial Number. 2) Wait for first ring (the second ring should
be a false ring from the fax/data switch box) and then dial four quick
ones ("1111"). (NOTE: Some FAX machines that send single "BEEPS" every
second will not have to do this step.) 3) The phone will pick up and
after the "BEEP" leave your voice message or FAX.

Certainly. As long as he doesn't interfere with the repeater's
normal operation, which is given primary usage preference on the
frequency since it is incapable of "easily" moving to another
frequency.

I think this is a little misleading. It was written in the context of the apparent threat to 2M/70cm by the LEOS companies. Iridium will not operate in those bands. I believe it's actually somewhere in the 2GHz region. Not sure if it's in a ham band but it's not in the 2M/70cm bands. The way it's written, one could easily infer that Iridium is part of the 2M/70cm. threat. Not so, Newsline.

Following up on my own article, here's the info from the Iridium web page, specifically http://www.iridium.com/gloss/gloss.html:

"Communication Frequencies
Radio spectrum utilized by IRIDIUM services include the L-band (1616-1626.5 MHz) for voice communication with IRIDIUM subscribers; and the Ka-band (19.4-19.6 GHz for downlinks; 29.1-29.3 GHz for uplinks) for gateway and earth terminal transmissions."

So, it appears that Iridium is not threatening 2M/70cm...at least not for now.

It took me a while to understand the authors point, but now I believe I do. The private repeaters outnumber the open/closed repeaters by nearly 10:1.

When I first responded to the original posting, I stated that I would try to have an open mind regarding this matter. After reading the responses to the thread, I have come to conclude that ownership of a "coordinated repeater" is defacto priority ownership of a frequency.

I think the real hard spot is the "private" repeaters which have coordinated pairs, and therefore primary usage preference under Part 97 rules. This is where the abuse it taking place and should be addressed. An earlier post by Mike K6YPB shows the number of Southern California "private" repeaters on 440 mHz.

>Here are a few numbers for you to think about, and are easily verified:
> 440 MHz repeaters
> 44 open repeaters
> 15 closed repeaters
> 437 private repeaters.

Given that Southern California has nearly 90% of available 440 mHz frequencies are allocated to private and closed repeaters, it seems the Part 97 primary usage priviledges should only apply to repeaters which, though "closed", are non-discriminatory in membership and priviledges are available to all who are legally licensed, current in reasonable dues and non-disruptive in their operating practice.

I will have to do some research on the procedures for petitioning the FCC for clarification or revision of that portion of the rules granting

primary useage preference. Anyone been there and done that?

Source record: 212554

Hi everyone:

There's a real big possibility of my having to take a trip to Laramie, Wyoming this week. I plan on using the HERTZ system once I get north of Cheyenne, where I'll most likely lose the 145.115 Ft. Collins repeater.

I'm told that the whole system uses just one frequency pair and that's on 146.82- All I need is the PL tone and I'm all set. Also, if there are any other repeaters noteworthy of trying, I would appreciate having those two (I'm already aware of the 145.23 repeater in Cheyenne, which has a 114.8 PL tone and will use that one if I can't reach the HERTZ system). My plan, however, is to stay on the HERTZ (sp?) system, but could definately use a few pointers as to other places I might go should I need to. :-)

Any other useful information would also be appreciated. :-)

I look forward to your replies!! :-)

ABSOLUTELY NOT!!!!

At least NOT without being able to protect what is now "repeater A" from being interfered with by "repeater B". The most efficient (but not BY ANY MEANS flawless) way to do this is by use of CTCSS as it's the most common and widely used method of handling this situation (next to cross-band repeating, that is).

Another option would be to use an adjacent frequency pair that's NOT in use. Many communities use 15 KHz. spacing while others use 20 KHz. spacing. It just depends on where you are and what options are available to you.

Just my humble opinion..... :-)

Not sure if AEA is going under (like a sponge...:) but hams like me have
pretty much given up with "packet". My PK-96 is rarely used here in Los
Angeles. I wonder if they were too financially commited to packet?
Companies sometimes mysteriously close shop quickly...If I had to guess
why AEA would possibly close, I'd guess that it was because many hams
have dumped packet....

1073. Re: Closed Repeaters

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-17 00:00:00 UTC
From: Mike <mikes@fishnet.net>
Message-ID: <32900B18.26F3@fishnet.net>
Source record: 212557

Here is a list of what has happened to the vhf/ufh ham bands. Does anyone really believe if fair for all hams?

440 MHz repeaters
44 open repeaters
15 closed repeaters
437 private repeaters.
Now consider this. the 70cm band is 10 MHz wide! Now take the 2 meter band which is only 4 MHz wide:
232 open repeaters
42 private repeater
15 closed repeaters.
this is a striking difference. But then the 2 meter band is not coordinated by SCRRBA. Not that I am trying to bully you into seeing things my way, I am just giving you examples of why I think SCRBBA is dirty. There is not wayto contact them. No published Phone number, unless you belong to ckick and mail that is sent to them goes unanswered.

How about the 1.25 meter band, 222 to 225 MHz.
118 open repeaters
36 private repeaters
22 closed repeaters
And that is after we lost I think it was 2 MHz to private business.

The 23cm band, 1240 to 1300 MHz is more even:
45 open repeaters
52 closed repeaters
59 private repeaters
I do think there are good reasons to have closed private repeaters, as long as they can be used thru open membership. They should be reserved for linked repeater systems. Those who operate those systems have gone to great expense to create the linked systems and users should donate to the system.

> > can deny you access to it any time I want.

I think one should ALWAYS keep in mind that when you're using a repeater,
you're essentially using someone's ham shack (or extention thereof in the
case of mountaintop or buildingtop repeaters) because insofar as that
repeater has their callsign on it, YOU ARE USING **THEIR** EQUIPMENT!!!

It's true that the vast majority of repeaters are turned over to clubs,
and therefore become club property, but even clubs can restrict access
to their repeaters if they so desire (and they have a NUMBER of weapons
they can use to ensure that ONLY those with authorization are able to
access the repeater[s] while YOU are not - EVEN THOUGH YOU RECEIVE THE
REPEATER FULL QUIETING)!!!!!

I have been repeatedly criticized by those on the Fidonet HAM echo for
"re-writing" the rule book by saying the above. Heck!! I *thought* I
I knew it all,but I know see WHY the Fidonetters are right and *I* was
wrong!!!

Just my observations and experiences..... :-)

Actually you can't. The FCC (for whatever it's worth) recognizes the ARRL's band plan. If you decide to plant yourself on the input/output of an active repeater frequency, you and whomever else is transmitting can be held for malicious interference.

There are many, many cases where the FCC has come to an area and documented and prosecuted individuals for just what you are advocating.

Hello all,
I hope this doesn't sound too simple. I'm looking for a circuit
to be used in a battery charger, much like the "battery maintainers"
sold commercially.

The circuit allows the battery to be charged to a ref volt level -
then stops charging (lights a charged led) - when the batt voltage goes
a volt or so below the ideal voltage , the trickle charger goes on again.

Such a device is commercially sold as a a "battery maintainer" for RV or
Marine batts during the off season. I want to use it to maintain a
storage batt for my gear.

Any help on this item, or other pearls of wisdom regarding use of car
batteries for emergency / standby use would be helpful.

That is other than the obvious fact that such storage batteries are not
suited for this application.

Fact: Car batteries are cheap and plentiful.

Any help would be appreciated.

In looking through the Oct QST, there were no AEA ads at all, despite the Sept edition having a big splash on page 7. Sadly, it could be true after all.

They have a 24 hour literature line at 1-800-432-8873. I think I'll give it a try.

Scott:
I have a 1994 Ford Escort, and I mounted a Yaesu FT 2200 in the cup holder tray, in front of the gear selector (auto trans). I'm not sure of the size of the 8000, so I dont know if it would fit.
I cut two round pieces of wood that fit into the rubber tray insert. I mounted these to a sheet metal plate painted wrinkel black. I mounted the radio bracket to this plate. It is mounted so the radio angles up. It just fits when the selector is in park.
With this arangement, I can remove the radio in a matter of seconds.
I believe th 1997 Escort has the same cup holder arangement.

I was not going to apply for a vanity call, but I have now decided it would be nice to have a 1x2.
I filed an electronic form 610V over the internet.
I understand I now must send a form 159 with payment.

Is anyone familiar with how this works?
Does the FCC assign me one of my choices, if available, and wait for payment befor acctually issueing me the call? Or do they wait untill payment is received to even look at the application. How do I even know if the application was received?

I submitted the 610V, but after I printed out form 159, my browser crashed. I had not submitted the 159, and am not even sure if I was supposed to.
Any help greatly appreciated!

Needed to replace the nicads in the battery pack of my Icom u2AT HT,
as the old ones wouldn't hold a charge. Found that the nicads RS
sells for cordless phone use are about the same physical size as
I needed. The orginal maH wasn't marked, but can't be that radically
different than the 250maH batteries I put in. RS also had 280 and
300 maH batteries, but I figured that the old batteries Icom used
years ago were probably of lower maH, so I got the 250maH's. I needed
7 cells, and got the 3 cell and the 4 cell packs. And they had
solderable tabs on them. Works well now.

I measured the radio and here are the measurements: 5 1/2" Wide 1 5/8" Tall 6" Deep
(rounded off to the nearest/greatest 1/8")
The deep meausrement is from the back of the fan to the front of the faceplate not
including the knobs (add 1/2" for the knobs). Hope this helps as I have seen your post
a few times earlier but could not tell what you were asking.
The Wideband fuction of this radio has a serious flaw; while connected to a base
discone it receives imaging across the entire span. I havent put it in the vehicle yet
to see how much less sensitive it is to intermod and imaging. It is still a very fine
radio. Just thought you'd like to know.

> 1997 Ford Escort and was wondering if there were any known problems with
> the mix.

I have a '95 Ford Escort and have installed both VHF-UHF and HF rigs
in the car. The fuel pump interferes with the HF rig, but not the VHF-UHF
rig. The alternator causes a bad whine on recieve in the Kenwood 733.
Stations that I have asked about my output on VHF-UHF say that the whine
is only noticable if they are actually listening for it. Usually it is
the other way around, so I was a little surprised by this. Since I don't
use the car power for HF, I do not have any alternator problems on HF.

> I do have a stock Ford alarm installed.

> I have some mounting ideas, but if others have ideas, too (space is kind
> of limited) please let me know.

As you mentioned space is sparce but both the 733 and the Yeasu FT-900
are capable of separation. I mounted the 733 in the ashtray and the 900
in the cup holder (as was noted by another poster) and they are both visible
and the knobs are accessable. One note, when the car is in park, its just
a little difficult to use the rig that is mounted in the cup holder, but
it is still possible to work the rig.

The cup holder and ashtray are different for '97 than '92-'96 so the cup
holder mount isn't a "plug-in" exchange. Also the ashtray is too small to
mount any of the current mobile rigs that I have seen, so mounting two rigs
would be a bit more of a challenge than with the older models.

Those who will not learn from history are doomed to repeat it.

Look through the info-hams (that's this newsgroup) archives. You'll
see that the same discussion and flamewar comes up every year about this
time - or just after Christmas, when all the newbies discover that there
are channels on their new radios where they aren't welcome.

If anyone has anything NEW to say on this topic, I'll be astonished.

1097. Low Frequency Reception in Boston Area

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-18 00:00:00 UTC
From: ashlock <ashlocks@mdc.net>
Message-ID: <01bbd510.e9ef7cc0$1af042ce@comp-1>
Source record: 212567

Is anyone in the Boston area receiving by 1 watt beacon on 187.55 kHz? The ID is "WA" and runs continuously.

My signal typically gets out about 50 miles from my home base in Andover, MA, with good receiving equipment, and favorable conditions.

You might want to get the book called "Now You're Talking" which is
published by the ARRL. You can get it at most Radio Shack stores and
any ham radio and almost any electronics store.

While this may be true, Scott, there's **NO** rule that says that he *HAS*
to make it available.

You may destest closed repeater systems, but simply because the repeater
on ANY given frequency pair DOES NOT give you the right to simply carry
on with your conversation on the repeater's input OR output frequency.
If you can hear your friend THAT well, that's what conventional simplex
frequencies are for.

The ONLY frequency that falls on the border of this argument is 146.400
(and even then in some communities, it's used as a simplex frequency while
in others, it's either the input or output frequency of a repeater).

Just my humble opinion..... :-)

It's worse. Just listen to Newsline as they report people caught by the Amateur Auxilliary (sp?) or take a spin up and down the dial on 20, 75, and 80 meters.

I may be still a no-code techie, but there have been times which I've tuned my receiver onto these bands and have heard some pretty raunchy stuff.

That's why when I get *MY* HF, I only plan to work 10, 12, 15, 17, 40, and 160 meters on a regular basis and keep my 20 and 75 & 80 meter work to checking into nets. I may also work some 30 as well.

1102. Re: What the heck is going on around 3894.5 KHz ??

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-18 00:00:00 UTC
From: shendo@access-one.com
Message-ID: <tcpnntpd.16.11.18.1.13.0.3046360759.1414972@access-one.com>
Source record: 212572

After listening to 80m tonight...I went back to the 11m band where it was more humane and more interesting...and much more peaceful.

Thought I would never say that about ham radio.

80m the HAMS CB.

Cussing, racism, slamming, jamming, assualt, descriptive sexual acts, etc.....

why would anyone want to listen to that.....thank god for CW. Then the dits and dahs sound the same and I have yet to hear them unpleasent.

As for the 80m ham band...No thanks....more trash talk there than I have ever heard on CB.

one night I was listening to a couple of stations slamming another. Pretty nasty stuff......I still have a CB in my shack since many people I know and dont know are not hams....we run the CB here for emergencies. We are in the interior part of Alaska...help is at least 100 miles away. and most travelers have CBs in their cars or RVs. Anyway....
I heard two people saying how they were going to GET this individual....so I got tired of hearing it and reached over and turned down the CB.....and to my suprise I was still hearing it...

IT WASNT THE CB....IT WAS COMING FROM THE HAM RIG....

My thoughts...and I welcome all replies...good and bad....just be adults folks...and keep the PERSONAL VULGARITIES OUT OF IT...just tell me what you think and I will respect that.

CURSE..or insult me (you can disagree with me and Ill respect that..but dont get personal and insultive) and Ill erase your message before I read it all. \

IF ITS THAT IMPORTANT TO REPLY.....then I would like to read all of what you have to say...so dont make me delete it before I through.

THANKS ALL.

Did I read that right??? Did you say 187.55 khz.??? Don't you mean
147.555 Mhz. or 18.755 khz.??? If not, then you're transmitting OUT
OF BAND as that's WELL above the 2 meter band (and WAY above the receive
capability of most radios I know).

Perhaps you need to clarify this.....

Keep in mind though that these numbers are somewhat skewered when looking at the problem from a NATIONAL perspective. For instance, here in Colorado, we have MANY repeaters that are open, but are privately owned. We also have repeaters that are PLed for reasons OTHER than just simply keep the "unknowns" out. RFI from other non-ham transmitters being the No. 1 reason.

In short, not all states operate like Southern California (or California in general) and not all states operate like we do. We put repeaters atop mountains mostly because that's the easiest way in order to overcome localized obstacles such as buildings, other signal-attenuating structures, and the like.

It's also the only way which systems like the Colorado Connection work (given the terrain in which we have to work with).

Just my humble opinions..... :-)

73's for now my friends!! :-)

Hi! The University of Maryland Amateur Radio Association (UMARA / W3EAX) is seeking donations of old commercial or amateur handhelds on 2m. We will be using them to give to new hams to use our repeater and we will also use them for emergencies. I saw in your posting that you have a very inexpensive radio for sale. If you would consider donating your radio to the University of Maryland, please drop me a line.

Thanks and 73.

> >violations. **

I understand your point, but I partly disagree. I think that it's
certainly
within reason for any hams to voice their opinions to anyone who commits
a breach of
etiquette in the ham radio fraternity (i.e. the hogging of call signs
like Mr. Roach
and also the notorious Tucker family who got 30+ calls).

Getting the FCC involved is another thing. Do we whine and complain and
risk them
getting PO'd at us (which the ham community DOESN'T need), or do we try
to handle it ourselves
by letting everyone know what constitutes common courtesy and ethical
behavior.

The frequency is available. As long as the communication does not
interfere with the normal operation of the repeater...

Yup, you can legally do that. As long as, of course, you are not
interfering with the otherwise normal operation of the repeater.
It is considered "bad amateur practice" to operate on a repeater's
input or output, and repeaters are considered the primary user of a
frequency, since they cannot easily change frequency.

>Closed repeaters are not in the amateur spirit in my book.

A broad generalization. You should look at the reasons why many
repeaters are closed, rather than making a broad, inaccurate
assessment based on your own inherent prejudices.

The CB-ization of 2 meters is one primary reason why we have closed
repeaters on 440mhz -- to escape the riff-raff.

>great expense to create the linked systems and users should donate to the
>system.

I'm glad we're now using your perception of morality to determine when
people should contribute to a repeater's operation. In case you didn't
know, when many 440mhz repeater systems were set up they were done so
with "great expense" because there was no commercially-available gear
to do so at the time.

In the 1980's, when people wanted to establish a "closed" repeater,
they were told they could not do so on 2 meters, and were thus
forced to 440mhz. It has only been the past few years, with the
commercial availability of 440mhz radios at cheap prices, has this
"problem" even become known, as (someone else rightfully put it) "a
bunch of newbies get their radios after xmas and determine there are
a whole bunch of frequencies they are not welcome on"

The FCC has stated publically that all repeaters, by their very
definition, are "closed" repeaters. The degree of closure to which
the trustee decides to enforce is entirely up to him/her.

Good news.
Fellow surfers, you could order real cool T-shirts or/caps with
a fantastic embroidery on: the graphic is a surfer surfing on www,
embroidered like waves on the sea in the virtual world, the word
cyber-surfer is lively located on the corner of the design. The whole
embroidery creation is just a piece
of art that reflects your spirit and your feeling.(Three colors of the
design will change
according to the colour of your ordered garment.)
If you want to personalized the garments, please add one dollar to the
price and specify the fonts you like, we will embroider your name on.
If you do not care about our graphic but want a phrase to be embroidered
such as CYBER-PUNK, PUNK@WWW.NET, WILD NETTER, NET HACKER or whatever you
want, just write to us, we will make you excited.
Caps, white, black, blue, yellow, red, purple, green and
brown, with ajustable buckle one size fits all.
T-shirts, white, black, blue, yellow, red, ash and natural, with M, L,
XL & XXL.

Please give yourself a treat or give your loved one a personalized X-mas
gift!

Both the T-shirts and the caps only cost U.S. $7.5/ Cdn $9.5 including
postage (even international!)
Please order by mail with check or money order to Power Vision Embroidery
Co. The address is:
****
Power Vision Embroidery Co.
101-1600 Adelaide Street North
London Ontario N5X 3H6 Canada
****
Please write your return address as clear as possible for quick
delivery.
Thank you.

Sorry Big Al,
But I have bought batteries, solar panels, and accessories from these folks for years. I have NEVER had a problem with their quality of product or ability to resolve any problem. I really wish I had seen this post before this weekend. E. H. Yost (Mr NiCad) was at the Fort Wayne hamfest this weekend. I'd like to hear the story from their perspective. Based on past history and the value they bring to the hamfests I attend, I think your WARNING is without merit.

Hi Mark. There are several places to look up DX calls, but not the Red Horse International Callbook that you may be looking for. However, the following will yield a ton of DX info -- managers, some addresses and callbooks for some countries. There are too many to list so I will direct you to my DX Reference Page listed below.

P.S. Looks like you work at Hewlett-Packard -- I was with the Santa Clara Div for 21 years.

Hi Tom!

I filed my vanity application via the interactive electronic 610V. I filled out the credit card section and mailed the 159 to the fee processing P.O.Box the next day. I was WA8MSF. I'm now W8MM, my first choice!

You absolutely must send in the form 159. This is the only way the FCC has to accept payment of the filing fee. THEY WILL NOT SEND YOU A BILL AND THEY WON'T DO ANYTHING UNTIL THE 159 ARRIVES. You know that the 610V is good since you received a sequence number and the browser printed a 159 before it crashed. If you want to know if they receive your 159, send it via a method that includes a proof of delivery.

The fee processor (Mellon Bank) will attempt to charge your credit card or will deposit your check as soon as they get the 159 in the mail. As far as I can tell, they need some form of payment from you to get going.

I had a close call when my bank upgraded me to a "gold" MasterCard and closed out the "normal" account, which, naturally, I had used for my 159 info.

While I chased this down, I discovered that a fee processing number is attached to your application by the Mellon Bank and passed by computer, along with the payment info, to the fee collection people at the FCC in Washington (not Gettysburg). When the fee people are happy with your form of money, they then bless it for Gettysburg to run it in the computer. If it's not blessed, this information is passed to

Gettysburg, where the app is dismissed for lack of payment before it is run in the licensing computer.

I get the feeling that they may wait 10 days for checks to bounce. Also, the fee people are able to re-run Mellon-Bank-declined credit card attempts if you know the fee processing ID number (available from the 800 info-number people at Gettysburg). The trick is to know if it has been declined in time to head it off at the pass. My bank, which is now suitably humble, helped out with this in my case.

Go ahead and attach a check for $30.00, or fill in the credit card information, but DO send in the form 159 to the Pittsburg P. O. Box (it's a different box than the paper 610's go to!) listed on the info. Nothing good can happen until you do. Of course, nothing will happen anyway, until all of Day 1's and any intevening days' action has been cleared first.

As a weird note, I asked the info people what would happen if a credit card payment were disputed after the call was assigned. He said that if something like that happened, the FCC would set aside the call sign assignment if they could get no satisfaction on payment.

>can happen in ANY non-linear circuit ... adding filters to your receiver
>will only help if the intermod is happending in your receiver front end
>and only if the signals are far enough out of band that the filter
>supresses them to a level that no longer drives the front end into its
>non-linear region ...

Carl gave a good explanation of intermodulation. Intermod is *always* a mixing process. One of the products falls on a frequency of interest and causes interference. This can occur in any non-linear stage of a transmitter or receiver, or in external equipment. There will almost always be an audible artifact of intermod. Usually it is a squealing or howling noise, though frequently there can also be sensible modulation heard from the offending signal(s). Note that the desired signal doesn't even have to be present for intermod to be a problem. The undesired signals which are mixing can produce a product on the frequency to which the receiver is tuned anyway.

Cross modulation occurs when the desired signal is modulated *in amplitude* by an unwanted signal. This almost always takes place in a (supposedly) linear receiver amplifier, though in one notable case it took place in the transmission medium itself. By driving the amplifier toward saturation, or toward cut off, the unwanted signal causes the desired signal to apparently vary in amplitude in response to the unwanted signal.

In receivers with AGC, this is often called AGC pumping, though that is often a secondary symptom of cross mod in the front end. For FM signals and radios, where signal amplitudes are constant under modulation and where AGC is absent due to use of limiting amplifiers, cross modulation is most frequently called *desense* because the presence of the constant amplitude unwanted signal tends to reduce receiver sensitivity to the desired signal. There is usually no other audible artifact. But for AM/SSB/CW receivers, there may be audible modulation on the desired signal caused by the unwanted signal.

In cases of intermod or cross mod caused by strong *out-of-band* signals, a bandpass filter on the offending stage will usually solve the problem. A circulator is a good solution for transmitter intermod even if the signal

is *in-band*. That's because a circulator keeps signals from entering the output port of the transmitter. If the signal is in-band for a problem receiver, however, neither a bandpass filter nor a circulator will help. In that case, the only solution is to *stiffen* the receiver stages by using higher standing currents. This makes it harder for the offending signal to shift the stage operating point and cause cross modulation or intermod.

HTs cannot afford the extra battery drain of stiffening the stage, and usually don't have room for good bandpass filtering, so they tend to suffer worst from intermod and cross mod problems. This is especially true when they are attached to external antennas with a good capture area so that lots of the offending signal is captured and conducted to the radio.

Note again that intermod is a mixing process that produces a product on the desired frequency, and can occur even if there is no desired signal present by mixing two or more undesired signals to produce a product on the receiver frequency. Cross mod requires the presence of a desired signal, which will be modulated in *amplitude* by the offending signal. Mixing products may be produced during cross modulation as well, but they don't have to fall on the desired frequency. The problem for cross mod is the stage gain variation directly produced by the offending signal.

Most of what hams operating FM commonly call intermod is indeed intermod and not cross mod. That's because cross mod rarely produces audible symptoms other than a sudden loss of sensitivity in FM receivers, but intermod almost always does produce audible symptoms. For hams operating in some amplitude modulated mode, cross mod will produce audible symptoms too, and it can be hard to determine if the real problem is true intermod or just cross mod in that case.

just another nickle's worth.
as above ...'the frequency is not' I would think go ahead and use the
frequency when it's quiet, if the repeater comes up during your QSO,
then IT (and it's owner) are interfering with you... interesting thought
no?
Also if you were to set up an open repeater which would probably be MUCH
busier, then the private repeater would interfer with you a lot!
Perhaps some cause for action.
No closed repeater has a right to a 'reserved' frequency. I concede the
operator of a repeater has the right to regulate who uses it, but that
person also has rights.
Think about it.

: 232 open repeaters
: 42 private repeater
: 15 closed repeaters.

Note that the context here is southern California, as was pointed out by the original poster.

Following the thread of discussions on this topic in the past couple of years, it would seem that this area is an extreme example of this situation. Is it this bad elsewhere, in other densely-populated areas of the country?

In general, I have no problem with either closed or private repeaters, and I can see good reasons for both. If the mix were 50-50, I'd say that there's no reason to complain. But, essentially, one of the largest ham populations in the country is being disenfranchised from operating on an entire band, using FM and repeaters; *that's* the injustice.

And, if it weren't for the fact that so many 440 repeater systems are private, but rather just closed, where a ham could apply for membership, that also would be another case.

Fortunately, I live about 60 miles east of downtown LA, and the 440 repeater situation out here is much better. We have several repeaters on that band that are accessible, and I am a member of one that has superior coverage. If that weren't the case, guess I'd be ticked off, too.

You've done the right things so far. Have the ARRL send you their
prospective amateur package. That'll list clubs in your area. Hunt
them down and visit them. Talk to experienced amateurs in your area
about your interest in amateur radio. They'll be glad to talk your
ear off about it. There's no substitute for good one on one coaching
to get you started off right. Don't just rush out and buy a radio.
Try out radios of other hams you meet. Talk to them about radios,
what particular models can and cannot do, which ones have good
service records, which ones don't, etc.

Note, you may run into some curmudgeons who aren't welcoming to
you. Don't let that discourage you. Most amateurs will want to
be friendly and helpful. If you don't find a good mentor at first,
don't stop looking.

George, CD (that's just a working term, the proponents may have a
different marketing name for it when it is approved), occupies
10 kHz. Its spectrum looks almost perfectly rectangular on the
spectrum analyzer (with just a bit of corner rounding). It sits
in the same channel with the AM signal, and appears to be almost
completely buried by the much stronger AM signal.

In the FCC test for which we shot video, the engineers were somewhat
close mouthed about the exact way the signal is generated and demodulated.
I expect patent applications were being prepared. But some general things
could be learned. Apparently the signal gets its compatibility by being
phase locked to the existing AM carrier. The hookup at the AM station
required both connection to the audio source and a sample of the RF
carrier (the CD transmitter was separate from the AM transmitter, but
shared the same antenna). Apparently (and this is speculation on my
part since they didn't say) the signal is interleaved in time and phase
with the existing AM modulation so that it is "where the AM signal is not"
at any given moment. This appears to be the key difference between it and
an ordinary GMSK signal. (This isn't startlingly new, we do spectral
interleaving in ordinary NTSC transmissions too, but we don't do it
dynamically.)

Otherwise, it appears to be an ordinary band limited digital modulation
using on the fly compression and strong FEC (not too unlike what we're
doing with HDTV). It's that strong coding gain which gives it the advantage

in working SNR. Other than the compatibility factor, which they say can be dropped when the switchover is complete, the big secret appears to be their audio compression algorithm. They're delivering FM stereo quality in a much lesser bandwidth than could be expected from uncompressed digital audio. I didn't hear any disturbing artifacts, so their compression scheme must be very clever. (Again they were pretty close mouthed, it may be that they are using heavy symbol overloading on the digital signal instead, but it didn't look like it to me on the spectrum analyzer, it looked like GMSK.)

The prototype system occupied a 3 foot rack in the monitoring van, but the engineers said that one of their partners, a major receiver manufacturer, assured them it could be reduced to a consumer chipset small and cheap enough to put into any consumer receiver. Note that there are some major players backing this scheme. I know who some of them are, and figured out some of the others, but I'm not supposed to know that, so I don't feel comfortable naming names here. All I think I can do is tell you what I saw and heard during the testing.

What I saw was a signal that was virtually invisible on the analyzer due to the much stronger AM signal overlaying it, and what I heard was FM quality stereo sound under conditions where the AM signal was so bad as to be unusable. When the digital signal did fade (and it did in a couple of places), it went from perfect to silent like throwing a switch. There was virtually no time when it was in the least distorted. That's pretty characteristic of digital signals employing strong FEC. In places where the AM signal was usable, I didn't hear any buzzing or other indication that the digital signal was causing it any interference. So their claim of compatibility seems to be true too.

Now what could all this mean to radio amateurs? Well, I asked if the signal could be used on shortwave. They said yes. The same things that made it resistant to multipath fading in the hilly urban terrain where we were testing would also make it resistant to skywave multipath fading. They said that they had conducted a nighttime test in the Standard Broadcast band using a skywave signal (I didn't witness this), and that it had performed just as impressively there as it did in the daytime tests I did see. They said that some SW broadcasters had already expressed interest in the system.

Another thing is that the system appears "compatible" only with its companion AM signal. When faced with other signals with which it isn't phase locked, the interleaving (apparently) wouldn't work. That implies that it would need a clear channel, just like broadcasters do now, when the switchover is complete. (Note, they didn't *say* this, it's just my interpretation.)

Now what those two things imply to me is that if international broadcasters adopt this system, they will be in a much stronger competitive position with other broadcast outlets due to the superior performance and lower required power of the system.

And that implies a greater interest in SW broadcasting (which otherwise might be expected to wane as satellite DAB gains momentum) than we might expect. And, sharing with other services would be undesirable. So we might see additional pressure on HF for expanded exclusive broadcast allocations.

As to amateur *use* of the technique, if consumer chipsets do become available (as I was assured they will), it should be possible for amateurs to use the technique fairly inexpensively. But I'm not sure it would be very beneficial for amateurs. First, its compatiblity advantage is moot since it wouldn't be simulcast with an amateur AM signal. And second, we don't really need high quality stereo audio for amateur HF operations. And third, we don't want to tie up 10 kHz per transmission.

So I don't think the exact technique I saw would appeal to amateurs. But, an adaptation of the technique, or something similar, could offer some advantages. If we limited ourselves to a communications grade voice bandwidth mono signal, a variation of the technique should fit in a SSB bandwidth (or less). We'd still reap the advantage of coding gain, and keep an edge on the order of 30 db over conventional AM, IE about 20 db better than SSB (perhaps a bit more).

Now that's pretty good, but there's probably more to it than first meets the eye. I *think* it would mean that a 10 db SNR SSB signal would be translated to a 30 db SNR CD signal at the same (average) transmitted power level. That's great. But I don't *think* it would mean we'd have a 10 db SNR CD signal when a SSB signal was at -10 db SNR. That's because I think the FEC would fall apart at really weak signal levels. Remember what I said about the CD signal in really bad areas, it cut off like a switch had been thrown. So I don't think the system would be of much interest to weak signal operators, but it might tickle ragchewers to death to have FM quality voice on HF at moderate power levels.

Mutual interference issues are an unknown with this system. I don't know what would happen if two CD signals overlapped. I doubt it would be anything good. I think amateurs would be far better served by adopting SS technique rather than this CD technique. SS offers inherent band sharing that this system doesn't seem to have (note that I don't *know* that CD wouldn't share well, that's just my guess). If we can use whatever compression trick they're using to lower the transmitted data rate, however, that could be a large step toward making digital voice a practical reality on amateur HF. And *that* would be a large step forward whatever particular digital modulation we ended up adopting.

I am interested in buying a used 2 Meter rig. I perfer ICOM although
Kenwood would be a second choice. I am looking for at least 50 watts out
with 20 or so memories and need programable PL transmit.

Look again, Patrick. That's 187.55 *kilo*Hertz. That's not *above*
the 144 *mega*Hertz band. In fact it is in the VLF license free
experimental band. Operators there are called Lowfers.

Well, what exactly is the etiquette with respect to club callsigns?
Since there hadn't been club calls issued for a long time, there is
really little established etiquette. Is it poor practice for a
club to have more than one callsign? Afterall, a club may operate
several stations and/or repeaters, why not allow a club to have
multiple calls?

>Getting the FCC involved is another thing. Do we whine and complain and
>risk them
>getting PO'd at us (which the ham community DOESN'T need), or do we try
>to handle it ourselves
>by letting everyone know what constitutes common courtesy and ethical
>behavior.

My problem is that each amateur is liable to make up a new definition
of "ethical" behavior whenever they feel the need. We're quite
creative, we'll come up with an argument to support virtually
anything we feel. If someone hurts our feelings, we're immediately
ready to invoke "good amateur practice" and "common courtesy", even
if no one has ever heard of the particular "common" courtesy we're
talking about.

No, we don't need to annoy the FCC. I believe they've had it up
to about *here* with the way hams have acted about Gate 2 Day 1...

> acctually issueing me the call?

Tom: I worked the FCC 610v beta site the Friday afternoon
before gate two day one apps were accepted on Sep. 23. Called
FCC several times to be sure I understood the process. Customer
rep stated that if I sent a check with my form 159? to the bank
address it would be fine, because of my hesitancy to put credit
card number on the form electronically. My fear was that if the
check didn't hit the bank on the 23rd, my list of 25 choices would be
held up. Not so, said the FCC rep. The callsign would be processed
and assigned, she stated, when my 610V came up. She further stated that
the processing in this matter was not dependent upon a check being in the
bank at the time the 610V was processed. She further stated, however,
that if the check wasn't received "within a reasonable time", the
callsign would be "retrieved" (cringe and shudder here!)

My check was not in their hands for nearly a week after the 610V was
transmitted electronically. Notwithstanding the fact that it was, six
weeks later when the curtain came up, the lady gave no indication that
the two events needed to be simultaneous, 610V and 159.

Good luck. FCC says over 6,000 1x2's are still available.

> --
> Stan
> KF0NC
> "90% of all statistics are made up"
Question:

If a repeater owner decides to not use the frequency pairs, such as by
shutting down the repeater, may another use the frequency, even for a
repeater, as long as it goes
off the air when the coordinated repeater comes up. If this were
automatic, then the frequencies could be reused (such as for the very
low usage private machines). It if
shut down when the "coordinated" repeater came up, it could not be
interfering. (At least to my reading of part 97.) ;o>

Question 2:

As none of the 12.5 khz splits are assigned by SCRUBBA (at least to my
last looking in the call books) and the commerical bands on both sides
of us have no technical problems with working these kind of splits, and
even 6.25 splits, should we come up
with an "open" frequency coordinator for the other half of the usable

frequencies. If
enough hams were interested, this group would be "recognized" by the
amateur public.
As SCRUBBA does not have any of the odd 12.5kHz splits coordinated,
there could be no
overlap? ;o> If this kind of organization were to form, it
certainly would be nice to have an "open" repeater policy as a part of
its bylaws for the frequencies it assigns. (Given the FCC's comments on
"closed" repeaters, "Open" is more of an attitude on accessibility, than
a legal term. It implies that the machine may be used without cash
compensation. Maybe we need a new term, like "non-commerical" ham
repeaters!)

Maybe we can get enough amateur operation on 440 to make the band "look"
like it is really being used, before *REAL* commerical interests put it
to better use?

73's de W6QS --- Thoughts are my own, not my employer's.

> > ---
I know that 12.5kHz may have some co-channel interference, but for this
to happen, the co-channel must be in use. A regular scan of the 440 band
shows that this is not too likely. If SCRUBBA were to publish the
locations of the various repeaters, rather than just saying "Covers the
whole world" (or at least all of So. CA!), then a reasonable effort
could be done in coordinating the location of the various users. I,
personally, would rather have an ocassional interference from a
co-channel than have the whole band in commerical use, whether the
owners of the repeater have ham licenses (current situation) or
commerical calls (likely if we don't better utilize it).

Also, for the very low usage private machines, let them share the
frequency. If their duty cycle can be shown to be well below a couple of

percent, then the user might ocassionally have to wait a couple of minuites. So what! Reuse of the radio channels is what led to the creation of CTCSS in the first place.

We also should start weeding out the "paper only" clubs as the FCC is starting to do in the commerical bands. If the repeater is not in use, then it should lose the preferred status of being coordinated. This would not be too difficult to do with a modern scanner and a PC: log the acutal usage of the various machines versus time and length of conversation. The results would be *MOST INTERESTING*.

You might try one of the surplus houses for reed relays. The light duty relays
have glass enveloped switches in them that are fairly easy to extract.
Try Pembleton Electronics in Fort Wayne, IN. Gateway Electronics in St. Louis, MO.
or MAI Parts in Indianapolis, IN. Good Luck.

Don't forget that governments manage radio spectrum (ideally) to
maximize the value to all people. Governments don't "steal"
amateur bands - they permit amateurs to use them in the first
place. Understanding that the bands aren't inherently the
rightful possessions of radio amateurs is key to retaining the
permission to use them.

Depends on your section of the country, I guess. Around here the
ratio of private-to-open repeaters is more like 1:10.

>After reading the
>responses to the thread, I have come to conclude that ownership of a
>"coordinated repeater" is defacto priority ownership of a frequency.

Ownership of a coordinated repeater gives you primary access to
a frequency when it comes to inter-repeater interference, nothing more,
nothing less. [97-205(c)]

>This is where the abuse it taking place and should be addressed.

96-205(e) allows trustees to restrict access.

Can you provide me with your home address so I can show up and
operate your station at my convenience?

>Given that Southern California has nearly 90% of available 440 mHz
>frequencies are allocated to private and closed repeaters, it seems the
>Part 97 primary usage priviledges should only apply to repeaters which,
>though "closed", are non-discriminatory in membership and priviledges
>are available to all who are legally licensed, current in reasonable
>dues and non-disruptive in their operating practice.

That's a nice moral judgement on your part. What about repeaters
that are privately owned and do not have "memberships"?

>I will have to do some research on the procedures for petitioning the
>FCC for clarification or revision of that portion of the rules granting
>primary useage preference. Anyone been there and done that?

Jim Johnson, Chief, Personal Radio Bureau, stated on 2/1/94 in a letter
to Mr. Sidney L. Radus states:

"Section 97-205(e) ... applies whether a repeater is
coordinated as an "open" or "closed" repeater. Further, the
rule applies without regard as to whether a repeater is
coordinated at all. Rule 97-205(e), without qualification,
permits the individual responsible for the proper operation
of a repeater to limit the use of a repeater to certain user

stations".

No. We had a bunch of bozos around here who used this logic and
complained to the FCC about "being interfered with". They were laughed
at by the FCC and told that operating on a repeater input/output is
"bad amateur practice", and they would be subject to fines and other
sanctions if the activity continued.

>No closed repeater has a right to a 'reserved' frequency. I concede the
>operator of a repeater has the right to regulate who uses it, but that

Nobody using an amateur frequency has any "rights" -- neither the
repeater trustee nor the user. We are granted privileges and powers,
but are not accorded "rights" by the FCC.

Your first mistake is to assume that a piece of paper from the FCC
grants you any "rights" to begin with.

I tend to agree with you Scott, except for one point. Several
repeaters around here in Oregon use PL tones to prevent noise from
bringing up the repeater. Most of these publish the tones used
(normally 100.0 hz) in the ARRL directory. As for the rest, well ham
radio will have its groups.

Unless some people in the club are willing to find this idiot there's not much you can do. I think jsut about every repeater has the occasional idiots.

You can find the Realistic HTX-100 10 meter mobil used for around $100. I bought one in MINT condition at a hamfest this weekend for $115. I've seen them for $95 as well. It's a SSB and CW rig only. Works GREAT too!

You can use the frequency BUT the control operator or better yet the
Trustee
determines who uses the repeater.

> 73 de AE3T Howard

I don't think templates are really necessary as QSL's are a breeze to
design using CorelDRAW, but I've got a QSL laid out if you'd like to
have it. You'll just have to change my info with yours.

To see my card, go to

http://www.alfano.com/test/qsl.jpg

I used CorelDRAW for everything but the call sign, which was done with
Adobe Photoshop 3.0.

From: Howard <ke6pbl@loop.com>
Message-ID: <329112B9.7F7@loop.com>
Source record: 212628

I've experienced some problems with my 79A. The most annoying and recurring problem has been with the 440 volume that cuts out. Took it to Kenwood today to see it they can finally fix it. Also have been disappointed with the BNC ant. connector. While everyone knows that BNCs are generally easy to break, the 79A seems to be far too easy to become loose.
It may just be a "lemon" because my 79AD (Deluxe) model seems to be very reliable after nearly a year.
Anybody able to get more than 1 1/2 years on the PB-34 battery? I usually use it until it's discharged before I recharge them.

Any hams out there with 79A problems...similar or different?

> 73,
> Bernie K5XS
> Honolulu

I have to disagree about most problems being cross-modulation rather
than intermodulation problems.

Cross-modulation is a very specific phenomenon, usually only experienced
with
amplitude modulated signals. It is caused by a strong signal pushing
(usually)
and RF amplifier into a non-linear region. This causes all signals
passing
through the amplifier to suffer varying amplification as the interfering
signal
moves the amp through non linearity. The result is amplitude modulation
of all
signals by the interfering signal.

Intermodulation is again caused by a strong signal pushing an amplifier into non
linear regions, but in this case, the result is that multiple signals passing through
a non linear device intermodulate (or mix) to create new signals (same principle as
the mixer stage of a receiver). These new signals tend to splatter everywhere.

Strong signal interference on FM is almost always due to the intermodulation
phenomenon rather than cross modulation.

That is correct, intentional interference is illegal, so if you
intentionally transmit on the input to cause problems for the repeater
you are in violation. By the same ruling, if you are holding a simplex
conversation on the input, one of the repeater users cannot interfer
with your conversation.

I don't agree with closed repeaters myself, I see them mostly as EGO
boosters of the owners, and for that reason I belong to a club and
support their charter which is to maintain open repeaters and open
autopatches. This takes a little more effort for the members to
monitor and shutdown the machine for inapropriate action, but we feel
it is worth it.

The closed owners claim they have to be closed to keep the squirrels
off their machines, which leads to a question, what is their behaivor
that they have such a problem with squirrels? We don't have that much

of a problem with the open machines.

The other item of interest, is they feel so secure with their closed codes etc, in a day or two I have been able to get into each of the closed machines without to much difficulty, and I'm sure the squirrels will learn how, and have even more fun messing with a closed repeater.

While I don't refute the actual jamming reported, the situation
is not at all prevalent here in New Jersey. I have access to
many 2m repeaters and we just don't get any significant
jamming. Yes, there is some, jamming, but it is nothing
like that as found on CB and/or as reported elsewhere
on 2m. Just a point from this part of the world.

First the disclaimer section.

The following is MY OPINION, not IMO, definitely not IMHO. The last think I plan on being is humble. If you share MY OPINION, great, if you don't, well, it isn't going to change the course of my life, so who cares. If you want to reprint this, it must be done in its entirety and with full credit to me and only me (see I told you I wasn't humble)

Furthermore..ATTENTION LENNIE ATTENTION LENNIE. TO LENNIE the self appointed sayer of what should be posted here, I am advising you that I will be posting, in part, an analogy, between the early US settlers and the early US amateur operators.

For your benefit LENNIE, as you are the cyberscissors man.

ANALOGY: noun similarity in some respects between things otherwise unlike

I really owe this to both Carl and Lennie. Each has repeatedly stated over and over and over that amateur operators use 1930's logic in the 1990's. I kept mulling this over till siddenly it hit me like the hot kiss at the end of a wet fist. THE ENTIRE BS ABOUT AMATEUR RADIO AND TECHNOLOGY IS A HOUSE OF QSL CARDS.

Carl insists that amateur radio has to keep up with technology, that the masses of incoming nocode licensees should only be those willing to prove time and time again that they are the cutting edge of technology. Well boys and girls, ain't gonna happen, never will. Technology will be advanced alright, but it won't be the amateurs themselves doing it and it certainly won't be by those who choose to participate in this great HOBBY. Indirectly maybe, but by tinkering, in the basement workshop, NEVER. Those days of wine and roses are nothing but a memory and a smile on some old person's face

Let us go back to the olden days, the days of How the West Was Won..great movie, Debbie Reynolds, Jimmy Stewart..sorry, I digress. Back then, if you wanted to survive, you were on your own. You broke something, an arm, a wagon wheel, you better be able to fix it yourself. Hungry?? Well if you didn't grow it, trap it and hunt it, you were dead meat. Then technology came along. The smoothbore flintlock gave way to a rifled barrel. Infinitely more accurate and at greater ranges. The powderhorn and minie ball gave way to the cartridge and bullet. Soon, 1 person could now hunt for several families including his own. The steam engine and train allowed fewer and fewer to provide for more and more. Today's US farmer can provide more food for more families than anyother time in history. But today, he buys his genetically adapted seeds from a

commercial interest. Buys his fertilizers from a chemical concern. Gets his petro products from an oil distributer. YET, he could do all these things himself, why doesn't he?? Simple, (A) he hasn't the resources $$$ to do so, (B) see A.

The need to be self sufficent has come and gone. It no longer makes sense or cents to try and grow a new strain of cotton when there are commercial concerns and universities doing the same. Doing it to make MONEY!!!! DOLLARS!!!! Todays farmer finds it easier to buy what is available than to manufacture what he needs. This is not to say that the farmer does not tinker, but the tinkering is unique to his particular situation, nothing more and nothing less, with conmercialization realized.

The pioneering amateur operators were very much like the early settlers. If they wanted to talk, to cw, to communicate, they had to build their own, fix their own, maintain their own. Yes, they had help, but the technology of the day was such that amateur could really only rely on himself to do the job. Through the 30's, 40's and even into the 50's and 60's this was very much the only way an amateur could get on the air. But then TECHNOLOGY..the electronics revolution came, an Lo and Behold, a whole new generation of amateurs found that the very equipment they needed was as close as their telephone. Why be rockbound, why build from scratch or a kit when you could go to the store and pick up the latest in HF/VHF radiogear. And each time a new model came out, surprise, it had something better in it. Did a ham develop it in his basement?? Nope, the government developed it or a commercial interest developed it. Marketed it and sold it by the thousands. The HOBBY grew. The HOBBY drives the technology. The HOBBY doesn't develop its own techology anymore, it simple says this is what we want, give it to us. The Kenwoods, Icom, and Yaesu's of the world then use THEIR money to develop the technology that WE the Amateur operators want. In fact, the technology used in manufacture precludes the vast majority of amateurs from ever building or fixing their equipment should the need arise. The average amateur has no way of diagnosing a defect anymore than the average farmer can cure an insect infestation himself. The technology needed demands that outside influences be used, whether a insecticide or UPS and a return authorization number.

The world of the do it yourselves has been replaced by the so called appliance operators. The yackers, dxers, contesters and gamers make this hobby go round. The commercial interests gear everything they have to satisfiying the needs of the majority. Look at the assortment of equipment available, of the shelf ready to use and / or abuse. New and exciting HF radios, dual band VHF/UHF, linears, antennas, and all geared for 1.2 GHz and below.

Don;t get me wrong, the era of the techoham is still alive, but even now is being threatened with extinction. Up there in the gigahertz, there they can play to their hearts contect. The demand for equipment to utilize those areas is non existant, therefore no commerciakl interest is

going to invest the $$$ for an out of the box radio. It's the pioneer spirit all over again. However, this is also where the commercial communications intrests want to stake their claim. This is where the multitudes of nocode technically oriented licensees are needed. Yet, few if any seem to be here. The big voices, the save our bands with techically engineered people, are found trying to open up HF and not the VHF+ bands. WHY?? There is no danger here, the battle is being waged elsewhere. "TO SAVE OUR BANDS FROM COMMERCIAL INTERESTS, WE NEED TO ELIMINATE THE CODE REQUIREMENTS!!! WE NEED BODIES, LOTS AND LOTS OF BODIES!! WE DON'T NEED THE YACKERS AND SCRAKERS, WE NEED ENGINEERS AND PLENTY OF THEM" Yet, here they are day after day..and not word one on how they plan on saving the VHF+ bands. On why the nocode licensees are really appliance operators, those who yack and dx and contest and ragchew. They refuse to face the fact that like the pioneers of old, despite their 1990's thinking, the days of amateur radio being the cutting edge are long gone. They even refuse to face the fat that the simple reason for those to try their technology on those battered bands is to yack and dx and ragchew. To say otherwise is very UNWISE

This is a HOBBY, not a lifestyle, as some would put it. Technology has it's place in amateur radio, but not 1st place. The do it yourself has gone the way of the vinyl LP, the 8088 chip and the rotary phone. Each had it's place in the sun and they are still around, but they are not the driving force they once were. It's now time to turn our attentions elsewhere. Amateur radio will be around for along time. To try and force it to change could be an even bigger mistake than most think.

Again, restating, this is MY OPINION. If you don't like it

GO OUT AND GET YOUR OWN

I have something new to mention about this topics....

Some closed repeater systems and allot of club systems charge a fee to gain access to the repeater. Now who is to say that these organizations arent using the money to finance the club. If they are, arent they violating the rules about charging money for amateur radio services.

I don't think that the way in which tthey spend the money matters as far as the law is concerned. I am pretty sure that charging people for a group of benefits (one of which is repeater usage or even autopatch access), it most definately illegeal.

I am allittle surprised that noone has yet mentioned this in the thread because I see this argument as the main one against closed repeater groups as 99.99% of them seem to charge membership fees and such for access to their repeaters and autopatch capability.

I am not waying in on either side of the issue, just mentioning the reality of the law.

Whats your opinion?

Thomas N2YTF (a ham in NYC, a place with too many "secret" repeaters.

I'll be in Michigan for almost two weeks in January. I am not
sure of the exact dates yet. (they are flexable)

I was wondering if there are any HamFests or other get-togethers
in Michigan during that time of year. I would like to check out
some activies if I can get to it.

Dan

No the unit was not fried at my turn on. I guess you have
never smelt the faint odor of a solid state semiconductor that burned
at some previous date. I do not know about your nose ... but I can
tell if something burned a while ago or just then. No way that it
burned up at power on. NO SMOKE WHAT SO EVER WAS EMITTED from the
unit while I had it. After removing the shield plate that houses the
UHF PA....the underside of the metal plated was charred. In order to
make that much of a char mark... I would have smelt it.
NO WAY I DID IT and as far as a bad load...I guess a true 50
ohm dummy load is a bad load. I terminate the load in a 50 ohm dummy
load via a bird watt meter.
THE VERY FIRST TIME I opened the package and put the radio up
to my nose before powering it on...I smelled the faint smell of
semiconductor that had burned.

It is very common for those who are unfamiliar with the conditions on 70 cm
here in Southern California to offer opinions on the subject of So. Cal.
coordination on this band. Unfortunately, however, the outrageousness
of the way 70cm has been handled out here escapes most out-of-town
hams.

And outrageous is the word. A small group has essentially managed to
stifle the development of 440 in order to benefit this same select few.
440 is rife with "paper" repeaters that are rarely or never used (and in some
cases nonexistent). Nevertheless, the publication of their "coordinated" status
is enough to deter many or most from making the financial investment necessary
to provide an open repeater on 440. One suspects that this discouragement
is their intent. And it has worked. Activity on 440 is extremelhy low.

It's a real shame.

The Denver area, like most metro areas, has concentrations of commercial transmitters that overload amateur radio receivers when within a couple miles of these sites. Earlier this year, a couple of our members reviewed the two types of filters (bandpass and notch) that are available that you can install on your mobile rig to improve the situation.

You can read these reviews in our on-line newsletter:

Metro Detroit's largest swap of the year is held in January (of all times!) at Southfield High School in Southfield, MI. I believe it is traditionally the third Sunday in January. Someone may have the exact date at hand please post.

That swap also seems to be held on the COLDEST and/or Snowiest day of the year also. If you are in the area it's worth the time.

Thats because RS could get sued for refusing to sell a radio to an unlicensed person. The only reason you really need a license is to use the radio, not to buy them.

If you want help in getting rid of the jammers etc, check my clubs home page. http://www.goodnet.com/indirect/www/ara There are some stories there about how our interference committee got help from the White House to have the FCC act on one of our jammers. There is also a story there on three young men, all licensed hams who had been playing games on police and other emergency frequencys and 2 meter repeaters. Our interference committee found them and they are awaiting possible action by the FCC. Meanwhile the police are making a criminal case out of it. The FCC will act but it could take a while to gather the necessary information etc.

Then why require any technical knowlege at all? After all, as long as one doesn't broadcast out of band or with too much power (problems solved by the radio manufacturer), who needs to know what a resistor is or what a transistor does? Let's just get rid of all the technical requirements, make the radios such that they can't transmit out of band, require government approval before using any homemade TX and reduce the tests to covering little more than rules and regs?

If you can make an argument for removing the code requirement, I can make a similar argument for doing the above. Will we all be better off then? I think not.

1194. RE: Looking for Ham ftp site

Newsgroup: rec.radio.amateur.misc
Date: 1996-11-19 00:00:00 UTC
From: clint.bradford@atdbbs.com
Message-ID: <9611190908556408@atdbbs.com>
Source record: 212479

>>I am looking for an ftp site that contains Ham-related info and files
>>(preferably Mac) such as FAQ's and tests.

How to Use the FTP Server at ATTENTION to Details BBS

The ATD BBS FTP Service is offered as a cost-effective means to obtain information and files from our Bulletin Board System (BBS) - using Internet E-Mail as the method of exchange. Using our FTP Server is as simple as addressing an Internet E-mail message to

ftp@atdbbs.com

containing one or more of the following KeyWords. Multiple KeyWords can be combined in a single Message - but it is very important that there be only ONE KEYWORD PER LINE! (An Example request appears near the end of this textfile.)

NOTE: "TEXT" = plaintext file sent to you as a return E-Mail message. "ZIP" = PkZIP-compressed file via UUENCODE. You will need to UUDECODE and then PKUnZIP the file.

KEYWORD DESCRIPTION
==========

[AMATEUR RADIO]

MAC-HAM List of 75+ Amateur Radio-related files for the Mac available on ATD BBS. TEXT

NECUTILS Those infamous, difficult-to-locate NEC laptop setup utilities. ZIP

RFI-TELEPHONE ARRL FAQ on how to deal with RFI and telephones. TEXT

WRC-97 As long as the threat to 2M and 440MHz continues, we will update this information package of texts relating to the "Little LEO / WRC 1997" issue. ZIP

HELP Returns text File with all active KeyWords. TEXT

==========

EXAMPLE:

You see from the above list of KeyWords that you want a copy of our MAC Ham files list, and our HELP text with ALL KeyWords.

Address your Internet E-Mail...

TO: ftp@atdbbs.com
SUBJECT: [anything here is OK]

...and write the corresponding KeyWord, MAC-HAM, as the ONLY word in the FIRST LINE of your message. And write HELP on the SECOND LINE of your message.

That's all there is to it!

==========

WHAT -IS- ATD BBS ALL ABOUT?

ATTENTION to Details Bulletin Board System (ATD BBS) specializes in telecommunications law/online legal issues, privacy and encryption.

We are a Supporting Member of the Association of Online Professionals, Educational Software Cooperative, Association of Shareware Professionals, Electronic Frontier Foundation, Nat'l Computer Security Association, and other organizations dedicated to protecting your online rights.

Source record: 212480

Actually, although 3894.5 is noisy and wild-sounding, it boils down to a few guys in TN, NC, and a few other places that camp there every night (which is okay, since they are not pushing anyone off the frequency)..the Abernathy Radio Group (ARG). I have spent many hours listening to this freq because of its EXTREME entertainment value. These guys, especially Paulie, W4FQF, are quite clever and funny. They are routinely harrassed and QRMed by a small group if characters apparently led by a W2 who I think lives in SC. It this
band of QRMers that are the most nasty and offensive in terms of language and tactics. The ARG guys just egg the QRMers on with toungue-in-cheek comments that seem to fly
completely over the head of this band of QRMers. This little battle of "wits" (witty on the part of Paulie and the Boys and half-witted on the part of the W2 and his little desciples) goes on every night and everyone looks forward to it. It's just a game.

I think there are worse freqs on 75m.....although what that statement says about ham radio I don't even want to acknowledge.

> apply until Oct. 7. I may get mine...??

I was on the phone with them today checking on a GATE 1A application
and they told me that they are waiting for some sort of ruling from
Washington on an appeal. And, until that is resolved you won't really
see any progress.

: of Cheyenne, where I'll most likely lose the 145.115 Ft. Collins repeater.

: I'm told that the whole system uses just one frequency pair and that's on
: 146.82- All I need is the PL tone and I'm all set..

It's really called the HERC system. And, it's not all on one frequency pair. Unfortunately, it's also not apparently linked up very well at this point. The 146.82- repeater near Laramie normally is the link to the rest of the system, which seems to cover the north central part of Wyoming the best. I believe 146.82- has a PL tone requirement and I think it's 107 or 114.

The 146.82 repeater covers the Cheyenne to Laramie area, but really doesn't get into Colorado very well because of the ridge between Fort Collins and Laramie.

Get a hold of N0MOE or N0UQE (both truckers); they can give you the latest scoop.

By the way, a more scenic route to Laramie (shorter in miles but probably no different in time required) is through Fort Collins on US287.

QST did an article on Intermodulation in the August, 1996 issue. It describes the phenomenon pretty well and describes commerical and homebrew filters that can usually be used to cure the problem if it occurs.

Hi Everyone,

I just purchased an Icom 706 and I'm interested in doing some portable HF operations. I wanted to get some tips.

I'm looking for power sources. I was thinking of using several gell cells to get a 20 to 30 amp hour rating. Does anyone know any good sources for gell cells? Are sealed motorcycle lead acid batteries OK?

What about antennas and tuners? I would prefer to use just a random wire antenna. I was looking at the SGC SG-230 auto tuner, but I might even go for a small Vectronics tuner that can handle long wire. Is the longer the antenna better or should I cut the wire the to be 1/4 wave of the band which I plan to operate on?

Any pointers would be appreciated. Any references to articles in QST, CQ, or 73 in the past year would also be great.

Thanks,
Kory

But of course. Didn't you ever watch the TV show "Combat" (or re-runs).
One of their WWII portable radios was in a field pack, but another type
literally WAS a tube type hand held... a LARGE handheld, but a handheld
radio nonetheless.

But for FREE????? Well, I did get a handheld radio "almost" for free.
It was a handheld receiver only (scanner) that covered the 2 meter band
(and the 160 MHz range public service band) for only $5... AND, it even
came with some crystals for the four channels. Unfortunately, none of them
were ham frequencies.

I have put up a new T-Hunt Web Page. Rather than write yet another introduction to T-Hunting, I start it off with some links to some known good T-Hunt pages, and then follow up with some stuff about the T-Helper and T-Helper Pro RDF projects. Hopefully by this time next year I will have a few new projects to write about as well.

http://www.quicksilver.com/~rbarris/

There is a link to the T-hunt section right there on the home page.

Hope you all like it. I previewed it on both Mac and Windows versions of Netscape 2.02/3.0 and everything looks OK here, but do let me know if you spot anything strange. I did get a couple reports of one animated GIF looking funny on Internet Explorer but OK on Netscape.

ARLB084 Vanity program on hold

ZCZC AG64
QST de W1AW
ARRL Bulletin 84 ARLB084
From ARRL Headquarters
Newington CT November 19, 1996
To all radio amateurs

SB QST ARL ARLB084
ARLB084 Vanity program on hold

The FCC has confirmed reports that no more Gate 2 vanity call sign applications will be processed until Commission personnel deal with complaints from several hams whose vanity applications arrived too early and were dismissed. An FCC spokesman in Washington said the affected hams all had used the same express service and had requested delivery on Saturday, September 21, so they would be in the queue for the opening day of Gate 2 on September 23. Instead, all of the applications arrived on Friday, September 20, were designated as ''untimely filed'' and dismissed by the FCC.

The affected applicants are seeking to have their applications reinstated. The FCC spokesman said he had ''no idea'' when a decision would be made in the matter. ''The irony of it is, in many cases, the call signs they would like have already been assigned,'' he said. The affected applicants were not aware that their applications had been dismissed until a week or so after the opening of Gate 2. The FCC spokesman said the issue is under review. At best, the applications could be included with the day-two applications; at worst, they could stay dismissed, he said.

Meanwhile, an FCC spokeswoman said personnel at the Gettysburg office were ''a little more than halfway'' through the stack of up to 550 day-one vanity applications that needed some kind of special handling--which the FCC calls WIPS for ''works in process.'' As many as 550 first-day applications ended up in WIPS, either because the FCC was unable to match one of the applicant's call sign choices or because the application contained ''inconsistencies''--some as simple as a date of birth on an application that was missing or failed to match one already in the FCC's database.
